Over 500 Occupational Profiles

Occupations by

- Title
- NOC Number
- Primary Interest
- Industry Cluster
- Production Date

Alberta
Human Resources
and Employment

This package provides labour market information to help you make career decisions. It can enhance your life and work exploration by helping you learn about the realities and requirements of various occupations. For each Occupational Profile, you can:

- Explore duties
- Explore working conditions
- Explore personal characteristics
- Explore educational and training requirements
- Understand how trends, geographic location, employment turnover, occupational growth and size of occupation impact the employment outlook
- Connect with further information to make life and work decisions.

We are constantly updating occupational information on our online version of OCCinfo. For the most current information visit **www.alis.gov.ab.ca/occinfo** The Alberta Learning Information Service (ALIS) website is Alberta's leading on-line source for career, learning and employment information. To access this and additional publications, visit **www.alis.gov.ab.ca/careershop**

Letter to Career Development Practitioners

Due to significant changes in the content of most occupational profiles since 2003, Alberta Human Resources and Employment has published a package of occupational profiles, industry groups and related reports for 2006.

Since *OCCINFO 2003* was printed, 46 new profiles have been produced, 479 existing Alberta occupational profiles have been updated in their entirety, and the remaining profiles have had particular sections revised (e.g. Employment and Advancement) and will be updated in their entirety and posted on the OCCINFO website in the next few months.

The new ***OCCINFO 2006*** package contains:

- Alphabetical List of Occupational Profiles
- New Occupational Profiles
- Discontinued Occupational Profiles
- Occupational Profiles by Industry
- Occupational Profile Reports by Title, Industry Cluster, National Occupational Classification (NOC) number, Primary Interest, and Production Date
- Definitions of *Employment Outlook*, *Location*, *Employment Turnover*, *Occupational Growth*, and *Size of the Occupation* as used in the Occupational Profiles
- 532 Alberta Occupational Profiles
- Occupational Profiles Index.

Keeping the Alberta occupational profiles up-to-date is an ongoing process. For this reason, the content of some of the profiles will have already changed by the time you receive this package. ***Users should check the OCCINFO website at www.alis.gov.ab.ca/occinfo for the most current copies of the profiles.***

If you have any comments or suggestions regarding this package, please complete and fax or mail back the attached ***We'd Like to Hear From You*** feedback form or e-mail info@alis.gov.ab.ca.

Feedback

We'd like to hear from you ...

H. Occupational Profiles Index

A. Alphabetical List of Occupational Profiles

February 14, 2006

1. Aboriginal Liaison
2. Accommodation Manager
3. Accountant
4. Accounting Technician
5. Actor
6. Actuary
7. Acupuncturist
8. Addictions Counsellor
9. Administrative Assistant
10. Advertising Account Executive (*New Profile*)
11. Advertising Copywriter
12. Aerospace Engineer
13. Agricultural Commodity Inspector
14. Agricultural Engineer
15. Agricultural Equipment Technician
16. Agricultural Products Processing Machine Operator
17. Agrologist (*New Profile*)
18. Air Traffic Controller
19. Aircraft Maintenance Engineer
20. Airline Pilot
21. Airline Ticket Agent
22. Animal Care Attendant
23. Animal Health Technologist
24. Animator
25. Announcer
26. Anthropologist
27. Appliance Service Technician
28. Arbitrator
29. Arborist
30. Archaeologist
31. Architect
32. Architectural Technologist
33. Archivist
34. Assessor
35. Astronomer
36. Athletic Therapist
37. Auctioneer
38. Audiologist
39. Auto Body Technician
40. Auto Detailer (*New Profile*)
41. Automated Systems Technologist
42. Automobile Accessories Installer (*New Profile*)
43. Automotive Service Technician
44. Avionics Technologist
45. Baker
46. Banking/Investment Manager
47. Banquet Manager (*New Profile - formerly part of the Banquet/Catering Manager profile*)
48. Bartender
49. Beekeeper
50. Binding and Finishing Machine Operators
51. Biochemist
52. Biological Technician
53. Biologist *(New Profile – replaces the Botanist, Marine Biologist and Wildlife Biologist profiles)*
54. Biomedical Engineering Technologist
55. Biotechnologist
56. Blaster (*New Profile*)
57. Boilermaker
58. Bricklayer
59. Broadcast Maintenance Technologist
60. Building Operator *(New Profile)*
61. Building Superintendent
62. Bus Driver

63. Bus Line Ticket Agent (*formerly Bus Line/Railway Ticket Agent*)
64. Bylaw Enforcement Officer
65. Cabinetmaker
66. Call Centre Agent
67. Canadian Forces Personnel - Commissioned Officer
68. Canadian Forces Personnel - Non Commissioned
69. Cardiology Technologist
70. Career and Technology Studies Teacher
71. Career Development Professional (*formerly Career Counsellor/Advisor*)
72. Carpenter
73. Carpet and Upholstery Cleaner
74. Cartoonist
75. Cashier
76. Casino Dealer
77. Casting Director
78. Caterer (*New Profile - formerly part of the Banquet/Catering Manager profile*)
79. Chauffeur
80. Chef
81. Chemical Engineer
82. Chemical Engineering Technologist
83. Chemical Technologist
84. Chemist
85. Child and Youth Care Worker
86. Chiropractic Assistant
87. Chiropractor
88. Choral Conductor (*formerly Choral Conductor/Director*)
89. Choreographer
90. Cinematographer
91. Civil Engineer
92. Civil Engineering Technologist
93. Coach
94. Collection Agent
95. College, Technical or Vocational Instructor
96. Combined Laboratory and X-Ray Technologist (*formerly Laboratory and X-Ray Technologist*)
97. Commercial Diver
98. Communication Technician
99. Community Health Nurse
100. Community Health Representative
101. Composer
102. Computer and Network Operator
103. Computer Engineer (*formerly Computer Hardware Engineer*)
104. Computer Programmer
105. Computer Service Technician
106. Concrete Finisher
107. Conservation Officer
108. Conservator
109. Construction Craft Labourer
110. Cook
111. Correctional Officer
112. Correctional Services Worker
113. Cosmetician
114. Costume Designer (*New Profile – formerly part of the Theatre Designer profile*)
115. Craftsperson (*New Profile*)
116. Crane and Hoisting Equipment Operator
117. Creative Writer
118. Credit/Loans Manager
119. Critic

120. Curator
121. Custodian (*formerly Janitors and Cleaners*)
122. Customer Support Analyst
123. Customs Broker
124. Customs Inspector
125. Dairy Producer
126. Dancer
127. Data Administrator
128. Database Analyst
129. Demographer
130. Dental Assistant
131. Dental Hygienist
132. Dental Technologist (*formerly Dental Laboratory Technician*)
133. Dentist
134. Denturist
135. Diagnostic Medical Sonographer
136. Dietitian
137. Digital Printing Machine Operator
138. Direct Distributor
139. Dispatcher
140. Domestic Housekeeper
141. Drafting Technician (*New Profile – formerly part of the Engineering Design and Drafting Technologist/Technician profile*)
142. Drilling and Service Rig Managers (*formerly Oil and Gas Well Drilling and Servicing Supervisors*)
143. Drilling Rig Leasehand/Floorhand (*New Profile - formerly part of the Oil and Gas Well Drilling and Service Rig Workers profile*)
144. Driving Instructor
145. Dry Cleaning and Laundry Workers
146. Early Childhood Educator
147. Ecologist
148. Economist
149. Editor
150. Educational Assistant (*formerly Teacher Assistant*)
151. Educational Counsellor
152. Electrical Contractor (*New Profile*)
153. Electrical Engineer
154. Electrical Engineering Technologist
155. Electrical Motor Systems Technician
156. Electrician
157. Electrologist
158. Electroneurophysiology (ENP) Technologist
159. Electronic Technician
160. Electronics Assemblers and Fabricators
161. Electronics Engineering Technologist
162. Elementary School Teacher
163. Elevator Constructor
164. Embalmer
165. Emergency Medical Responder
166. Emergency Medical Technician - Ambulance
167. Emergency Medical Technologist - Paramedic
168. Engineering Design and Drafting Technologist (*New Profile - formerly part of the Engineering Design and Drafting Technologist/Technician profile*)
169. English as a Second Language Teacher - Adults
170. Entomologist
171. Environmental Auditor

172. Environmental Education Specialist
173. Environmental Engineer
174. Ergonomist
175. Esthetician
176. Executive Housekeeper
177. Exhibit Designer
178. Exploration Geophysicist
179. Expressive Arts Therapists
180. Family/Marriage Counsellor
181. Farm Worker/Technician
182. Farrier
183. Fashion Designer
184. Feed Mill Production Worker
185. Field Production Operator
186. Film Director (*New Profile – formerly part of the Director – Film and Theatre profile*)
187. Financial Analyst
188. Financial Customer Service Representative (*formerly Teller*)
189. Financial Planner
190. Firefighter
191. Fish and Wildlife Officer
192. Fitness Instructor
193. Flight Attendant
194. Flight Service Specialist (*New Profile*)
195. Floorcovering Installer
196. Floral Designer
197. Food and Beverage Server
198. Food and Beverage Service Supervisor In Formal Dining Rooms
199. Food and Nutrition Manager (*formerly Food and Nutrition Management Technologist*)
200. Food Science Technologist
201. Food Scientist
202. Food Service Helper
203. Food Service Supervisor
204. Foreign Service Officer
205. Forensic Laboratory Analyst
206. Forest Technician
207. Forest Technologist
208. Forester
209. Fundraiser
210. Funeral Attendant
211. Funeral Director
212. Furniture Mover
213. Gas Pipeline Operators and Maintenance Workers
214. Gas Plant Operator
215. Gas Utility Operator
216. Gasfitter
217. Gemmologist
218. Geneticist
219. Geographer
220. Geological and Geophysical Technologist
221. Geologist
222. Geomatics/Surveying Engineer
223. Geomatics/Surveying Technologist
224. Geriatric Medicine Specialist
225. Gerontological Specialist
226. Glazier
227. Golf Professional
228. Grain and Forage Crop Producer
229. Graphic Designer
230. Greenhouse Operator (New Profile - *formerly part of the Greenhouse/Nursery Operator profile*)
231. Guest Services Attendant
232. Hairstylist
233. Hazardous Waste Management Technologist

234. Health Information Management Professional (*New Profile - formerly Health Record Technician and Health Record Administrator*)
235. Health Service Administrator
236. Hearing Aid Practitioner (*New Profile*)
237. Heavy Equipment Operator
238. Heavy Equipment Technician
239. Helicopter Pilot
240. Herbalist
241. Heritage Interpreter (*New Profile*)
242. Historian
243. Home Economist
244. Home Inspector (*New Profile*)
245. Homeopath (*New Profile*)
246. Hotel and Motel Desk Clerk
247. Human Ecologist (*New Profile*)
248. Human Resources Professional (*formerly Human Resources Officer*)
249. Hydrologist
250. Hydrometric Technician/Technologist
251. Illustrator
252. Immigration Officer
253. Industrial Designer
254. Industrial Engineer
255. Industrial Engineering Technologist
256. Information Systems Consultant
257. Information Systems Quality Assurance Analyst
258. Instrument Technician
259. Instrumental Musician (*formerly Musician*)
260. Instrumentation Engineering Technologist (*New Profile*)
261. Insulator
262. Insurance Adjuster
263. Insurance Agent/Broker
264. Insurance Underwriter
265. Interactive Media Developer
266. Interior Decorator
267. Interior Designer
268. Internal Auditor
269. Interpreter
270. Interpretive Naturalist
271. Investment Advisor
272. Investment Underwriter
273. Ironworker
274. Jeweller
275. Judge
276. Judicial Clerk
277. Kinesiologist
278. Kitchen Helper and Food Assembler (*formerly Kitchen Helper and Food Preparer/Assembler*)
279. Land Agent
280. Land Surveyor
281. Land Titles Examiner
282. Landscape Architect
283. Landscape Architectural Technologist
284. Landscape Gardener
285. Lather-Interior Systems Mechanic
286. Lawyer
287. Legal and Realtime Reporter
288. Legal Secretary
289. Letter Carrier
290. Librarian
291. Library Clerk
292. Library Technician
293. Licensed Practical Nurse
294. Licensed Practical Nurse (Advanced Orthopaedic Specialty)

295. Life Skills Coach (*New Profile*)
296. Lighting Designer (*New Profile – formerly part of the Theatre Designer profile*)
297. Lighting Technician
298. Linguist
299. Livestock/Poultry Producer
300. Locksmith
301. Logging/Forestry Equipment Operators
302. Machinist
303. Magnetic Resonance Technologist (*New Profile)*
304. Mail Sorter
305. Make-Up Artist
306. Management Consultant
307. Manufacturing Engineer
308. Mapping Technologist
309. Market Gardener
310. Market Research Analyst
311. Marketing Manager
312. Massage Therapist
313. Materials Engineering Technologist
314. Materials/Metallurgical Engineer
315. Mathematician
316. Meat Cutter
317. Mechanical Engineer
318. Mechanical Engineering Technologist
319. Mediator
320. Medical Laboratory Technologist
321. Medical Secretary
322. Medical Transcriptionist
323. Mental Health Worker
324. Messenger/Courier
325. Meteorologist
326. Microbiologist
327. Midwife
328. Millwright
329. Mining Engineer
330. Model
331. Mortgage Agent (*New Profile*)
332. Motorcycle Mechanic
333. Municipal Administrator
334. Municipal Recycling Truck Driver
335. Municipal Recycling Waste Handler
336. Museum Technician
337. Music Copyist
338. Musical Instrument Repair Technician
339. Nail Technician (*formerly Manicurist and Pedicurist*)
340. Nanny
341. Naturopathic Doctor
342. Nuclear Medicine Technologist
343. Nurse Practitioner (New Profile)
344. Nursery Operator (*New Profile – formerly part of the Greenhouse/Nursery Operator profile*)
345. Occupational Health and Safety Inspector
346. Occupational Health Nurse (*New Profile*)
347. Occupationa. Hygienist
348. Occupational Therapist
349. Occupational Therapist Assistant
350. Oceanographer
351. Office Equipment Technician
352. Oil and Gas Well Loggers and Testers
353. Oil Pipeline Operators and Maintenance Workers
354. Operations Manager
355. Operations Research Analyst
356. Ophthalmic Assistant
357. Optical Technician
358. Optician
359. Optometrist

360. Orchestra/Band Conductor
361. Orchestrator/Arranger
362. Outdoor Power Equipment Technician
363. Outdoor Sport/Recreation Guide
364. Painter and Decorator
365. Painter/Printmaker
366. Paralegal
367. Park Warden
368. Parole/Probation Officer
369. Parts Technician
370. Pathologist
371. Pediatrician
372. Personal Care Attendant
373. Personal Property/Equipment Appraiser (*New Profile*)
374. Pest Control Operator
375. Pet Groomer
376. Petroleum Engineer
377. Petroleum Engineering Technologist
378. Pharmacist
379. Pharmacologist
380. Pharmacy Assistant/Technician
381. Photographer
382. Photographic Processing Technician
383. Physical Therapy Assistant
384. Physician
385. Physicist
386. Physiologist
387. Physiotherapist
388. Plasterer
389. Plastics Processing Technician (*New Profile*)
390. Plumber
391. Podiatrist
392. Police Officer
393. Political Scientist
394. Pollution Control Technologist
395. Postal/Wicket Clerk
396. Power Engineer
397. Power Lineman
398. Power System Electrician
399. Pre-Press Technician
400. Printing Press Operator
401. Private Investigator
402. Private Trainer/Facilitator
403. Producer - Film, Radio, Television and Theatre
404. Professional Athlete
405. Property Manager
406. Prosthetic/Orthotic Technician
407. Prosthetist and Orthotist
408. Psychiatric Aide
409. Psychiatric Nurse
410. Psychiatrist
411. Psychologist
412. Public Health Inspector
413. Public Relations Representative
414. Pulpmill Operator
415. Purchasing Agent
416. Radiation Therapist
417. Radiological Technologist
418. Railway Car Mechanic
419. Real Estate Agent
420. Real Estate Appraiser
421. Receptionist
422. Recording/Sound Engineer
423. Recreation and Sport Administrator
424. Recreation Co-ordinator/Supervisor
425. Recreation Facility Operator
426. Recreation Therapist
427. Recreation Vehicle Service Technician
428. Refinery/Upgrader Process Operator
429. Reflexologist
430. Refrigeration and Air Conditioning Mechanic
431. Refuse Collector

432. Refuse Truck Driver
433. Registered Nurse
434. Rehabilitation Practitioner
435. Religious Leader
436. Reporter
437. Respiratory Therapist
438. Restaurant Manager
439. Retail Salesperson
440. Retail Shelf Stocker
441. Retail Store Manager
442. Rig Technician (*New Profile*)
443. Roofer
444. Room/Housekeeping Attendant
445. Safety Codes Officer
446. Safety Officer
447. Sales Representative (Wholesale, Nontechnical)
448. Sawfiler
449. Sawmill Machine Operator
450. School Business Official (*New Profile*)
451. Sculptor
452. Secondary School Teacher
453. Security Alarm Installer
454. Security Guard
455. Seed Cleaning/Conditioning Plant Manager
456. Seismic Observer
457. Seismic Worker
458. Service Rig Personnel (*New Profile - formerly part of the Oil and Gas Well Drilling and Service Rig Operators, and Oil and Gas Well Drilling and Service Rig Workers profiles)*
459. Set Designer (*New Profile – formerly part of the Theatre Designer profile*)
460. Sheet Metal Worker
461. Shipper and Receiver
462. Sign Language Interpreter
463. Singer
464. Social Worker
465. Sociologist
466. Software Engineer
467. Soil Scientist
468. Songwriter (*formerly Songwriter/Lyricist*)

470. Special Needs Teacher
471. Speech-Language Pathologist
472. Speech-Language Pathologist Assistant
473. Sport Medicine Physician
474. Sports Instructor
475. Sports Official
476. Sprinkler Systems Installer
477. Stage Manager
478. Station Attendant/Ramp Service Agent
479. Statistician
480. Steamfitter-Pipefitter
481. Steel Detailer
482. Sterile Processing Technician (*New Profile*)
483. Structural Steel and Plate Fitter
484. Surface Mining Equipment Operator
485. Swine Technician (*New Profile*)
486. Systems Auditor
487. Systems Security Analyst
488. Systems Tester
489. Taxi Driver
490. Technical Sales Representative
491. Technical Writer
492. Telecommunications Engineering Technologist (*New Profile*)
493. Telemarketer
494. Telephone Operator
495. Television Audio/Video Operator

496. Television Camera Operator
497. Theatre Director (*New Profile – formerly part of the Director – Film and Theatre profile)*
498. Tilesetter
499. Tool and Die Maker
500. Tour Guide
501. Toxicologist
502. Traffic Co-ordinator (*formerly Traffic Coordinator/Assistant*)
503. Traffic Manager
504. Translator
505. Transport Refrigeration Technician
506. Travel Consultant
507. Travel Guide
508. Truck Driver
509. Turfgrass Management Specialist
510. Underground Miner
511. Unit Clerk (*formerly Unit/Ward Clerk*)
512. University Professor
513. Upholsterer
514. Urban, Regional and Park Planners
515. Utility Clerk
516. Vending Machine Repairer
517. Vending Machine Route Worker (*New Profile*)
518. Veterinarian
519. Visual Merchandiser
520. Volunteer Manager
521. Warehousing Professionals
522. Watch Repairer
523. Water and Wastewater Treatment Plant Operator (*New Profile - combination of the Water Treatment Plant Operator and Wastewater Treatment Plant Operator profiles*)
524. Water Well Driller
525. Web Designer
526. Web Technician
527. Webmaster
528. Welder
529. Well Service Equipment Operator (*New Profile – includes former Well Service Pump Equipment Operator*)
530. Wildland Firefighter (*New Profile*)
531. Wireline Field Supervisor
532. Word Processing Operator

B. New Occupational Profiles

February 14, 2006

1. Advertising Account Executive
2. Agrologist
3. Auto Detailer
4. *Automobile Accessories* Installer
5. Banquet Manager
6. Biologist
7. Blaster
8. Building Operator
9. Caterer
10. Costume Designer
11. Craftsperson
12. Drafting Technician
13. Drilling Rig Leasehand/Floorhand
14. Electrical Contractor
15. Engineering Design and Drafting Technologist
16. Film Director
17. Flight Service Specialist
18. Greenhouse Operator
19. Health Information Management Professional
20. Hearing Aide Practitioner
21. Heritage Interpreter
22. Home Inspector
23. Homeopath
24. Human Ecologist
25. Instrumentation Engineering Technologist
26. Life Skills Coach
27. *Lighting Designer*
28. Magnetic Resonance Technologist
29. Mortgage Agent
30. Nurse Practitioner
31. Nursery Operator
32. Occupational Health Nurse
33. Personal Property/Equipment Appraiser
34. Plastics Processing Technician
35. Rig Technician
36. School Business Official
37. Service Rig Personnel
38. Set Designer
39. Sterile Processing Technician
40. Swine Technician
41. Telecommunications Engineering Technologist
42. Theatre Director
43. Vending Machine Route Worker
44. Water and Wastewater Treatment Plant Operator
45. Well Service Equipment Operator
46. Wildland Firefighter

C. Discontinued Occupational Profiles
February 14, 2006

1. Agricultural Specialist (*part of new Agrologist profile*)
2. Banquet/Catering Manager (*split into two new profiles*)
3. Botanist (*part of new Biologist profile*)
4. Director – Theatre and Film (*split into two new profiles*)
5. Electronics Engineer (*now part of Electrical Engineer*)
6. Greenhouse/Nursery Operator (*split into two new profiles*)
7. Marine Biologist (*part of new Biologist profile*)
8. Oil and Gas Well Drillers and Service Rig Operators (*oil and gas profiles reorganized to accommodate new designated occupations*)
9. Oil and Gas Well Drilling and Service Rig Workers (*replaced by new profiles*)
10. Service Station Attendant
11. Shoe Repairer
12. Social Sciences Research Assistant
13. Tailors and Dressmakers
14. Taxidermist
15. Theatre Designer (*split into three new profiles*)
16. Wellness Consultant (*too much overlap with new Occupational Health Nurse profile*)
17. Wildlife Biologist (*part of new Biologist profile*)
18. Water Treatment Plant Operator (*part of new Water and Wastewater Treatment Plant Operator profile*)
19. Wastewater Treatment Plant Operator (*part of new Water and Wastewater Treatment Plant Operator profile*)

D. Occupational Profiles by Industry

February 14, 2006

This section lists the occupational profiles by industry. An explanation of how the occupational profiles in each industry have been organized is included. The industries are:

1. Accommodation and Food Services Industry
2. Agriculture Industry
3. Computer-Related Occupational Profiles
4. Construction Industry
5. Educational Services Industry
6. Environment-Related Occupational Profiles
7. Finance, Insurance and Real Estate Industry
8. Food and Beverage Products Manufacturing Industry
9. Forestry and Logging Industry
10. Health Care and Social Assistance Industry
11. Information, Culture and Recreation Industry
12. Management, Administrative and Other Support Services Industry
13. Metals, Metal Fabrication and Machinery Manufacturing Industry
14. Mineral Products Manufacturing Industry
15. Mining Industry
16. Oil and Gas Extraction Industry
17. Other Manufacturing Industry

Occupational Profiles By Industry

Accommodation and Food Services Industry

Many occupational profiles describe work in the accommodation and food services industry. Following are three lists:

1. profiles about occupations involved in providing short-term lodging or food for immediate consumption
2. profiles about occupations related to accommodation and food services
3. indirectly related profiles about other types of work required in organizations that provide accommodation or food services.

Providing Lodging and/or Food

Accommodation Manager

Accommodation managers direct and control the operations of privately and publicly owned hotels, motels, campgrounds, trailer parks, camps, hostels and post-secondary institution residences.

Baker

Bakers prepare and bake breads, cakes, cookies, pastries, pies and other baked goods.

Banquet Manager

Banquet managers plan, organize and direct the service of food and beverages for banquets and other social functions.

Bartender

Bartenders mix and serve drinks and control the beverages leaving the bar in cocktail lounges, restaurants and other establishments where liquor is served.

Cashier

Cashiers total bills, accept payments, make change, provide information, fill out forms and provide receipts for goods and services in supermarkets, department stores, theatres, restaurants and other establishments.

Caterer

Caterers plan, organize and direct the preparation and service of food and beverages for banquets and other social functions.

Chef

Chefs are managers who plan, direct and participate in food preparation and cooking activities in restaurants, hotels, institutions and other food establishments.

Cook

Cooks prepare food in public and private eating establishments including hotels, restaurants, institutions, trains and ships.

Executive Housekeeper

Executive housekeepers manage the housekeeping and laundry departments in hotels, motels and institutions such as hospitals and schools.

Food and Beverage Server

Food and beverage servers accept and serve customers' food and beverage orders in restaurants and bars.

Food and Beverage Service Supervisor In Formal Dining Rooms

Food and beverage service supervisors co-ordinate and supervise food and beverage service in formal restaurants and dining rooms.

Food Service Helper

Food service helpers clear tables and assist workers who serve food and beverages in restaurants and other food service establishments.

Food Service Supervisor

Food service supervisors are responsible for the day to day management of food services in health care facilities, cafeterias, catering and hospitality establishments.

Guest Services Attendant

Guest services attendants provide personal services for hotel guests.

Hotel and Motel Desk Clerk

Desk clerks are employed in hotels and motels, and are often the first people to greet incoming guests.

Kitchen Helper and Food Assembler

Kitchen helpers and food preparers and assemblers assist cooks in restaurants and institutions by keeping the kitchens clean and by performing a variety of food preparation tasks.

Restaurant Manager

Restaurant managers plan, organize, direct and control the operation of establishments in which food and beverages are served.

Room/Housekeeping Attendant

Room/housekeeping attendants keep hotels, motels, clubs and dormitory rooms and associated lobbies, halls and banquet rooms neat, clean and well stocked.

Other Profiles Related to Accommodation and Food Services

Building Superintendent

Building superintendents maintain and manage commercial, institutional and residential properties.

Carpet and Upholstery Cleaner

Carpet and upholstery cleaners operate cleaning machines to clean carpets, rugs and upholstered furniture at customers' premises or in cleaning plants.

College, Technical or Vocational Instructor

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

Custodian

Custodians clean building interiors, furnishings and equipment.

Dietitian

Dietitians develop, implement and evaluate food and nutrition strategies to promote health and treat disease; manage food service systems; and develop and deliver related programs and policies.

Dry Cleaning and Laundry Workers

Dry cleaning workers clean clothes, drapes and other items using dry and wet cleaning techniques. Laundry workers clean clothes and linens that can be washed in water.

Flight Attendant

Flight attendants are responsible for the on-board safety of airline passengers and crew members.

They assist passengers and other crew members in emergency situations and offer a variety of services to passengers to make a trip as pleasant as possible.

Food and Nutrition Manager

Food and nutrition managers provide nutrition care and supervise food service operations in health care settings and commercial food service establishments.

Outdoor Sport/Recreation Guide

Outdoor sport and recreation guides organize and conduct outdoor activities such as mountain expeditions, rafting trips, hunting trips, fishing trips and trail rides.

Special Event Co-ordinator

Special event co-ordinators plan, organize and co-ordinate conferences, meetings, seminars, exhibitions, trade shows, festivals and other special events.

Tour Guide

Tour guides escort individuals or groups of people on tours and describe points of interest.

Travel Guide

Travel guides escort individuals or groups of people on holiday tours.

University Professor

University professors are employed by degree-granting institutions to teach and produce works of art or conduct research and publish their research findings.

Vending Machine Route Worker

Vending machine route workers fill, clean and maintain vending machines that dispense change or products in places such as offices, schools and hotels.

Indirectly Related Profiles

People in the following occupations may work for accommodation and food services establishments.

Accountant

Accounting Technician

Administrative Assistant

Arborist

Building Operator

Bus Driver

Call Centre Agent

Collection Agent

Computer Service Technician

Customer Support Analyst

Elevator Constructor

Human Resources Professional

Information Systems Consultant

Internal Auditor

Interpreter

Landscape Architectural Technologist

Landscape Gardener

Lawyer
Management Consultant
Marketing Manager
Power Engineer
Private Investigator
Private Trainer/Facilitator
Public Relations Representative
Purchasing Agent
Receptionist
Safety Officer
Sales Representative (Wholesale, Nontechnical)
Security Guard
Turfgrass Management Specialist
Webmaster

Agriculture Industry

Many occupational profiles describe work that involves growing crops, raising animals or providing agriculture-related support services. Following are three lists:

1. profiles of work involved in growing crops and raising animals
2. profiles about occupations related to agriculture
3. indirectly related profiles about other types of work required in agriculture-related businesses, institutions and agencies.

Growing Crops and Raising Animals

Animal Care Attendant

Animal care attendants feed, clean and generally care for animals in animal shelters, stables, kennels, pet shops, aquariums, zoos and wildlife parks.

Beekeeper

Beekeepers manage and keep colonies of honey bees in apiaries (bee-yards) to produce honey and hive by-products (e.g. pollen, bees wax), pollinate crops, or produce queens and bees.

Dairy Producer

Dairy producers operate dairy farms to produce bulk milk which goes to secondary processing to become table milk, cheese, ice cream, yogurt and other dairy products.

Farm Worker/Technician

Farm workers/technicians plant, cultivate and harvest crops, raise livestock and poultry, operate and maintain farm equipment, and maintain and repair farm buildings.

Grain and Forage Crop Producer

Grain and forage crop producers are farmers who grow grains such as wheat, barley, canola, oats, rye, flax seed, peas and speciality crops or forage crops.

Greenhouse Operator

Greenhouse operators plan, organize and direct the activities of greenhouse staff who propagate, grow and market flowers and other plants or produce.

Livestock/Poultry Producer

Livestock/poultry producers own, manage and direct farm operations that raise cattle, swine, sheep, poultry and alternative livestock.

Market Gardener

Market gardeners grow fresh produce (vegetables, berries, herbs and spices) and flowers for sale directly to consumers at farmers' markets and through farm gate sales or u-pick operations.

Nursery Operator

Nursery operators plan, organize and direct the activities of nursery staff who propagate, grow and market trees, shrubs and perennial plants.

Swine Technician

Swine technicians may be involved in all aspects of hog production or specialize in a particular area such as breeding or caring for pigs at a particular stage of growth.

Profiles Related to Agriculture

Agricultural Commodity Inspector

Agricultural commodity inspectors ensure that agricultural products meet the production, storage and transportation standards set by federal and provincial agriculture departments.

Agricultural Engineer

Agricultural engineers integrate engineering science and design with applied biological science to solve problems in agriculture, food and other resource industries.

Agricultural Equipment Technician

Agricultural equipment technicians repair, overhaul and maintain agricultural equipment such as tractors, tillage, seeding and harvesting equipment.

Agricultural Products Processing Machine Operator

Agricultural products processing machine operators run machines that process and package food and beverage products.

Agrologist

Agrologists provide advice and conduct research related to agricultural and environmental science and technology. They apply scientific principles to the production, improvement, use, processing and marketing of plants and animals, and the management of related resources.

Animal Health Technologist

Animal health technologists provide primary support to veterinarians by caring for animals, and assisting in the diagnosis and treatment of companion and livestock animal health disorders.

Arborist

Arborists, sometimes called tree care specialists or tree service technicians, maintain healthy trees and treat or remove injured and diseased trees.

Biological Technician

Biological technicians perform routine analysis and technical duties in the field, in the laboratory or both. They provide technical support and services for scientists and engineers working in fields such as agriculture, environmental science, resource management, plant and animal biology, microbiology, cell and molecular biology and health sciences.

Farrier

Farriers trim horses' hooves and, when necessary, forge metal bars into custom-made horseshoes or shape commercial shoes to fit and suit a particular horse.

Feed Mill Production Worker

Feed mill production workers operate machines that clean, separate, crush, grind, mix, pellet and bag grains for animal and poultry feed.

Food Science Technologist

Food science technologists work independently or provide technical support in laboratory analysis, food product development, processing, quality assurance or regulatory positions.

Food Scientist

Food scientists investigate the chemical, microbiological, physical and sensory nature of food, and apply their knowledge in the development, processing, preserving, packaging, distributing and storing of foodstuffs.

Pet Groomer

Pet groomers shampoo, clip and groom dogs, cats and other pets to improve and maintain their hygiene, comfort and appearance.

Seed Cleaning/Conditioning Plant Manager

Seed cleaning/conditioning plant managers operate plants that remove weed seed, foreign material and other contaminants from seed, and may upgrade seed to improve the quality of the product.

Soil Scientist

Soil scientists study the composition, distribution, development and behaviour of soils and the interaction of soils with soil organisms, animals and plants.

Turfgrass Management Specialist

Turfgrass management specialists maintain and manage grass and related areas and facilities, and assist in the design and construction of landscape projects.

Veterinarian

Veterinarians diagnose animal illnesses, treat diseased and injured animals, perform surgery, provide preventive medical services and provide advice regarding the care and breeding of animals.

Indirectly Related Profiles

People in the following occupations may work for agriculture-related businesses, institutions or agencies.

Accountant

Accounting Technician

Administrative Assistant

Arbitrator

Assessor

Biochemist

Biotechnologist

Chemical Technologist

Chemist

College, Technical or Vocational Instructor

Technical Sales Representative
Technical Writer
Truck Driver
University Professor
Warehousing Professionals

Computer-Related Occupational Profiles

Many occupational profiles describe work related to designing, installing and servicing computer systems and other types of digital equipment. Following are four lists:

1. profiles about occupations directly related to designing, installing and maintaining computer systems
2. profiles about occupations that involve assembling, installing or servicing other types of digital equipment
3. profiles about occupations involved in teaching others how to design, install and maintain computer technology
4. indirectly related profiles about occupations in which people may work in the computer industry.

Designing, Installing and Maintaining Computer Systems

Automated Systems Technologist

Automated systems technologists analyze, implement, maintain and design electro-mechanical (automated) systems. These systems often include mechanical components, sensors, actuators and control systems and may include stationary or mobile robots.

Computer and Network Operator

Computer and network operators establish, operate, maintain and support the use of local area networks (LANs), wide area networks (WANs), mainframe networks and related hardware, software and peripheral equipment.

Computer Engineer

Computer engineers design, implement, evaluate, modify, maintain and test computer systems and related equipment.

Computer Programmer

Computer programmers create, modify and test the forms, scripts and code that tell computers what to do.

Computer Service Technician

Computer service technicians install, service and configure computer systems and networks including desktop computers, servers and peripherals such as printers, disk drives and CD-ROM drives.

Customer Support Analyst

Customer support analysts answer computer-related questions, investigate complaints and work with others in a team environment to resolve users' software and hardware problems.

Data Administrator

Data administrators develop and implement data administration policy, standards and models.

Database Analyst

Database analysts design, develop, modify and maintain database management systems to meet specific user needs.

Electronics Engineering Technologist

Electronics engineering technologists apply the practical and theoretical principles of electronics to the development of electronic-based circuits, and the operation and servicing of electronic equipment and systems.

Information Systems Consultant

Information systems consultants analyze, design and develop information systems business solutions and provide advice on a wide range of information systems issues.

Information Systems Quality Assurance Analyst

Information systems quality assurance analysts develop and implement policies and procedures to ensure customer satisfaction, maximum performance and overall quality of software products and information systems.

Interactive Media Developer

Interactive media developers write, modify, integrate and test computer code for internet applications, computer-based training software, computer games, film, video and other interactive media.

Software Engineer

Software engineers research, design, evaluate, modify, integrate, test and maintain software applications, technical environments, operating systems, embedded software, information warehouses and telecommunications software.

Systems Auditor

Systems auditors conduct independent third-party reviews to assess the quality of software products, applications and information systems including hardware, networks and facilities.

Systems Security Analyst

Systems security analysts are computer specialists who assess administrative, physical and technical security risks to data, software and hardware, and develop policies, procedures and contingency plants to prevent or minimize the effects of security breaches and concerns.

Systems Tester

Systems testers execute test plans to evaluate the performance of computer software, information systems and telecommunication systems.

Web Designer

Web designers create websites for the Internet and sites internal to their organizations.

Web Technician

Web technicians set up and maintain Internet and intranet websites and web server hardware and software, and monitor and optimize network connectivity and performance.

Webmaster

Webmasters are responsible for the design, development, maintenance and success of World Wide Web sites on the Internet and sites internal to their organizations.

Assembling, Installing and Servicing Digital Equipment

Biomedical Engineering Technologist

Biomedical engineering technologists maintain and repair the biomedical equipment that physicians, nurses and other medical personnel use to monitor, diagnose and treat medical conditions.

Broadcast Maintenance Technologist

Broadcast maintenance technologists install, test, inspect, modify, repair and maintain radio and television broadcasting systems.

Communication Technician

Communication technicians install, repair and maintain telecommunication systems.

Electrical Engineer

Electrical engineers design, construct, analyze and test electrical and electronic components

and systems, and are responsible for their safe operation.

Electrical Engineering Technologist

Electrical engineering technologists apply their knowledge and understanding of electrical theory in business and industry settings.

Electronic Technician

Electronic technicians service and repair household and business electronic equipment such as radios and televisions, compact disc players and personal computer systems.

Electronics Assemblers and Fabricators

Electronics assemblers and fabricators mount, secure, interconnect and adjust parts and components to assemble and fabricate electronic equipment.

Instrument Technician

Instrument technicians install, maintain and repair the measuring and control instruments used in industrial and commercial processing.

Office Equipment Technician

Office equipment technicians repair and maintain business machines such as photocopiers, facsimile (fax) machines and laser printers.

Security Alarm Installer

Security alarm installers install and maintain electronic security alarm systems for homes, businesses and industrial properties.

Vending Machine Repairer

Vending machine repairers install, service and repair coin-operated vending machines that dispense food, beverages and other products.

Teaching

Career and Technology Studies Teacher

Career and technology studies (CTS) teachers help junior and senior high school students make effective career decisions, develop skills for personal living, and enter the workforce or further education.

College, Technical or Vocational Instructor

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

Private Trainer/Facilitator

Private trainers and facilitators conduct workshops, seminars, retreats, conference sessions and individual coaching sessions for young people and adults. They also may develop, design and evaluate training programs, curricula and materials.

University Professor

University professors are employed by degree-granting institutions to teach and produce works of art or conduct research and publish their research findings.

Indirectly Related Profiles

People in the following occupations may work for organizations involved in developing, installing or servicing digital equipment.

Accountant

Accounting Technician

Administrative Assistant
Creative Writer
Electrician
Graphic Designer
Lawyer
Librarian
Library Technician
Linguist
Management Consultant
Market Research Analyst
Purchasing Agent
Receptionist
Shipper and Receiver
Technical Sales Representative

Warehousing Professionals

Construction Industry

Many occupational profiles describe work involved in constructing, repairing and renovating residential, commercial and industrial buildings, or engineering works such as dams, refineries, roads, bridges, sewers and transmission lines. Following are three lists:

1. profiles about constructing or repairing buildings or engineering works
2. profiles about other occupations related to construction
3. indirectly related profiles about other types of work required in the construction industry.

Constructing, Repairing and Renovating

Blaster

Blasters break up rock and demolish structures by placing and detonating explosives.

Bricklayer

Bricklayers construct and repair structures such as walls, partitions, patios, arches, fireplaces and chimneys by preparing and laying brick and other masonary units.

Carpenter

Carpenters construct, erect and repair buildings and other structures made of wood, wood substitutes, steel and other materials.

Civil Engineer

Civil engineers plan, design and supervise the construction, maintenance and decommissioning of a wide variety of public and private structures and facilities.

Civil Engineering Technologist

Civil engineering technologists work with engineers, architects, surveyors and contractors in designing, developing and building civil engineering projects that are economical and functional and satisfy applicable standards and building codes.

Communication Technician

Communication technicians install, repair and maintain telecommunication systems.

Concrete Finisher

Concrete finishers place and finish concrete floors, driveways, sidewalks, curbs, bridge decks and other concrete structures.

Construction Craft Labourer

Construction craft labourers prepare and clean up construction sites, move materials and equipment and perform demolition, excavation and compaction activities.

Crane and Hoisting Equipment Operator

Crane and hoisting equipment operators service and operate the hoist and swing equipment used to move machinery, materials and other large objects.

Electrician

Electricians install, alter, repair and maintain electrical systems designed to provide heat, light, power, control, signals or fire alarms for all types of buildings, structures and premises.

Elevator Constructor

Elevator constructors install, modify, service and repair electric and hydraulic elevators, personnel and man-hoists, moving walkways, stagelifts, escalators and related equipment.

Floorcovering Installer

Floorcovering installers install, repair and replace resilient floorcovering materials such as underlay, carpet, sheet goods (e.g. vinyl) and resilient tile in commercial, residential and industrial buildings.

Gasfitter

Gasfitters size, install, test, adjust and service natural gas and propane equipment ranging from residential furnaces to industrial boilers.

Glazier

Glaziers cut and install glass and aluminum systems for commercial, residential and automotive applications.

Heavy Equipment Operator

Heavy equipment operators use a variety of mobile machines and attachments to excavate, grade and landscape earth or move workers, materials and equipment.

Insulator

Insulators apply, remove and repair thermal and acoustical insulation (e.g. calcium silicate, glass foam, mineral wool, styrofoam, fibreglass) on all types of industrial equipment (e.g. duct piping, heat exchangers, tanks, vessels).

Ironworker

Ironworkers fabricate, construct and join scaffolding, structural steel buildings, bridges, ornamental ironwork and pre-cast structures.

Lather-Interior Systems Mechanic

Lather-interior systems mechanics assemble and install the frameworks for gypsum materials in buildings.

Painter and Decorator

Painters and decorators apply paint, wall coverings and other finishes to interior and exterior surfaces of buildings and other structures.

Plasterer

Plasterers select, mix and apply gypsum, cement and acrylic mixtures to exterior and interior walls and ceilings to produce plain or decorative surfaces that are fire, weather or sound resistant.

Plumber

Plumbers plan, install and service plumbing systems, fixtures, piping equipment and controls.

Power Lineman

Power linemen construct, maintain and repair overhead and underground electrical power transmission and distribution systems.

Refrigeration and Air Conditioning Mechanic

Refrigeration and air conditioning mechanics install, maintain, repair and overhaul industrial, commercial and residential refrigeration and air conditioning systems and their component parts.

Roofer

Roofers prepare and apply protective coverings to flat and sloped roof surfaces.

Safety Officer

Safety officers, often called safety co-ordinators, advisers, directors or managers, facilitate the development, implementation and maintenance of workplace safety programs.

Sheet Metal Worker

Sheet metal workers design, fabricate, assemble, install and repair sheet metal products.

Sprinkler Systems Installer

Sprinkler systems installers fabricate, install, test, maintain, inspect and repair sprinkler systems in industrial operations, department stores, office buildings, hotels, schools, hospitals and residences.

Steamfitter-Pipefitter

Steamfitter-pipefitters lay out, assemble, fabricate, maintain and repair piping systems which carry water, steam, chemicals or fuel used in heating, cooling, lubricating and other processes.

Structural Steel and Plate Fitter

Structural steel and plate fitters lay out, prepare and assemble structural steel and steel vessels, containers and miscellaneous components.

Tilesetter

Tilesetters cover, repair and decorate exterior and interior walls, floors and other surfaces using ceramic, mosaics, marble and quarry tile, slate, stone, terrazzo or granite.

Welder

Welders join and sever metal components and make metal parts, tools, machines and equipment.

Other Profiles Related to Construction

Architect

Architects design building projects and advise clients regarding building projects. They prepare programs, sketches and cost estimates, produce scale construction drawings, write specifications and review on-site construction work.

Architectural Technologist

Architectural technologists work with architects, engineers and others in designing and developing plans and working drawings, estimating costs and supervising building construction projects.

Boilermaker

Boilermakers build, erect, repair, test and maintain all types of boilers, tanks and pressure vessels, and perform all types of structural and plate work on dust, air, gas, steam, oil, water and other liquid-tight pressure containers.

Cabinetmaker

Cabinetmakers build and repair custom or production-type fixtures and furniture made of wood or wood substitutes.

Commercial Diver

Commercial divers work in underwater construction and salvage operations inland (in rivers, lakes, canals and open roadsteads) or offshore (in harbours and oceans). They may participate in search and recovery operations or marine research, or do inspection, maintenance and repair work related to offshore oil and gas production.

Drafting Technician

Drafting technicians prepare engineering and architectural drawings, plans, diagrams and layouts. They may work independently as part of multidisciplinary teams or support the work of technologists, engineers, architects and other professionals.

Electrical Contractor

Electrical contractors erect or install electrical installations or equipment. They may also repair, service or maintain electrical installations or equipment.

Engineering Design and Drafting Technologist

Engineering design and drafting technologists develop engineering designs and drawings from

preliminary concepts and specifications, and prepare technical reports, construction specifications, cost/materials estimates and contract/tender documents.

Gas Utility Operator

Gas utility operators install and service gas utility pipeline systems that transport natural gas from its source to points of use such as building meter sets.

Heavy Equipment Technician

Heavy equipment technicians maintain, repair and overhaul towed and self-propelled heavy vehicles and industrial heavy equipment and commercial transport devices connected to or moved by a power unit.

Home Inspector

Home inspectors visually examine buildings and write reports about the condition of major components such as the roof, structure, exterior, insulation, plumbing, electrical systems, heating and other systems and components.

Interior Designer

Interior designers create and enhance interior spaces to improve quality of life, increase productivity and protect public health, safety and welfare.

Land Surveyor

Land surveyors plan, direct and conduct legal surveys to determine and interpret the location of boundaries, contours and other natural or human-made features.

Landscape Architect

Landscape architects combine artistic and creative perspectives with scientific and engineering knowledge to create, manage and conserve environments that are both functional and attractive. Their goal is to create harmony between natural environments, land features and architectural structures.

Landscape Architectural Technologist

Landscape architectural technologists assist landscape architects, architects, and other professional designers and planners in designing and developing outside and inside environments. Projects may range from assisting in planning public parks to developing inner courtyard spaces in shopping malls.

Landscape Gardener

Landscape gardeners work with other trades to carry out landscaping operations and design in a variety of environments. These environments include residential, commercial and public grounds, playgrounds, golf courses, garden centres, tree nurseries, greenhouses and interior landscapes.

Locksmith

Locksmiths install, adjust and repair locks, make keys and change lock combinations. They work on residential, automotive, commercial and institutional locksets and door hardware. Locksmiths may also install and maintain more sophisticated security systems.

Mechanical Engineering Technologist

Mechanical engineering technologists may work independently or with mechanical engineers in designing, drawing, developing and modifying various types of products, machines, mechanical systems and manufacturing processes.

Power System Electrician

Power system electricians install, maintain and repair electrical power generation, transmission and distribution systems and equipment.

Safety Codes Officer

Safety codes officers inspect the construction, installation and maintenance of structures and systems to ensure compliance with relevant codes, standards and regulations. They are concerned with the elements of public safety covered under the Safety Codes Act.

Security Alarm Installer

Security alarm installers install and maintain electronic security alarm systems for homes, businesses and industrial properties.

Water Well Driller

Water well drillers set up and operate mobile rotary, boring or cable tool drilling rigs used to drill residential, commercial and industrial water wells. They also conduct environmental assessment drilling.

Indirectly Related Profiles

Educational Services Industry

A number of occupational profiles describe work that involves providing instruction and/or training. Following are three lists:

1. profiles about teaching occupations
2. profiles about other occupations involving instruction or training
3. indirectly related profiles about other types of work required in the educational services industry.

Teaching

Career and Technology Studies Teacher

Career and technology studies (CTS) teachers help junior and senior high school students make effective career decisions, develop skills for personal living, and enter the workforce or further education.

College, Technical or Vocational Instructor

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

Driving Instructor

Driving instructors teach the knowledge and skills required to safely operate vehicles such as cars, motorcycles, transport trucks and buses.

Educational Assistant

Educational assistants help teachers with many time-consuming instructional and non-instructional tasks.

Educational Counsellor

Educational counsellors advise students on educational, personal and career-related issues and co-ordinate counselling services for students, parents and teachers.

Elementary School Teacher

Elementary school teachers teach and facilitate the learning of children ranging in age from four to 12 years in Kindergarten to Grade 6.

English as a Second Language Teacher - Adults

English as a second language (ESL) teachers provide English language and lifeskills instruction to immigrants, international students and others whose first language is not English.

Environmental Education Specialist

Environmental education specialists help create an awareness of the relationship between human activities and the natural environment. They develop and promote strategies that encourage others to make responsible choices regarding consumer decisions, government policies and corporate responsibilities.

Private Trainer/Facilitator

Private trainers and facilitators conduct workshops, seminars, retreats, conference sessions and individual coaching sessions for young people and adults. They also may develop, design and evaluate training programs, curricula and materials.

Secondary School Teacher

Secondary school teachers may be generalists or subject area specialists who provide instruction to young people in junior and senior high school (Grades 7 to 12).

Special Needs Teacher

Special needs teachers work primarily with children who require special instructional services to help them learn and develop to their potential.

Sports Instructor

Sports instructors teach the basics of a particular sport (e.g. skiing, swimming, baseball) to beginners and recreational athletes, or help experienced athletes further develop their skills.

University Professor

University professors are employed by degree-granting institutions to teach and produce works of art or conduct research and publish their research findings.

Other Profiles Related to Instruction and Training

People in the following occupations do some instructing and/or training.

Addictions Counsellor

Addictions counsellors help individuals, families and communities identify and deal with addictions through treatment and prevention programs.

Audiologist

Audiologists work with children and adults to prevent, assess, diagnose and provide treatment and counselling for hearing and balance disorders.

Career Development Professional

Career development professionals advise, coach, provide information and support people who are planning, seeking and managing their life/work direction.

Child and Youth Care Worker

Child and youth care workers work to improve the physical, emotional, intellectual and social development of vulnerable children and adolescents.

Coach

Coaches recruit, train and instruct athletes to produce the best sports performances possible. Their job titles generally reflect the sport in which they specialize (e.g. hockey coach, baseball coach, swim coach, figure skating coach) or their position relative to others in an organization (e.g. head coach, club coach).

Correctional Services Worker

Correctional services workers supervise adult and young offenders and administer a wide variety of correctional programs and services.

Dental Hygienist

Dental hygienists assess, diagnose and treat oral health conditions through the provision of therapeutic, educational and and preventative dental hygiene procedures and strategies to promote wellness.

Early Childhood Educator

Early childhood educators work with infants, toddlers, preschool and school-aged children in a variety of settings.

Expressive Arts Therapists

Expressive arts therapists use artistic media to help clients maintain and improve their physical and mental health by recognizing and developing often-untapped inner resources.

Fitness Instructor

Fitness instructors promote exercise as a healthy lifestyle choice and teach students, privately or in

groups, strengthening, endurance, aerobic, flexibility or weight training exercises.

Interpretive Naturalist

Interpretive naturalists explain the natural and scientific features of parks, botanical gardens and wilderness areas to visitors.

Librarian

Librarians assess the informational, educational, cultural and recreational needs of the community they serve, find resources to meet those needs, and provide access to and manage resources.

Library Technician

Library technicians support and assist librarians by performing technical tasks involved in library work such as collection management, cataloguing and document delivery. They also provide reference services and may manage small corporate, school or public libraries.

Mental Health Worker

Mental health workers help people deal with personal and social problems by teaching related skills and providing information and support.

Occupational Therapist

Occupational therapists help people whose capabilities have been impaired by physical or mental illness or injury, emotional or developmental problems, or the aging process to improve their ability to function in everyday life. They assist people in caring for themselves, returning to work and resuming community activities.

Recreation Co-ordinator/Supervisor

Recreation co-ordinators administer and oversee recreation programs and leisure services.

Safety Officer

Safety officers, often called safety co-ordinators, advisers, directors or managers, facilitate the development, implementation and maintenance of workplace safety programs.

School Business Official

School business officials provide financial and business services to publicly funded school boards.

Social Worker

Social workers help individuals, families, groups, communities and organizations develop the skills and resources they need to enhance their social functioning and social environments.

Speech-Language Pathologist

Speech-language pathologists work with children and adults to prevent, assess, diagnose and provide treatment and counselling for speech, language, voice and swallowing disorders.

Environment-Related Occupational Profiles

Many occupational profiles decribe occupations in which people may be involved in protecting the environment. Following are three lists:

1. profiles about occupations directly involved in monitoring or assessing the environmental impact of industrial processes or projects, or educating people about environment-related issues
2. profiles about occupations in which people may do environment-related work
3. indirectly related profiles about occupations in which people may work for organizations in the environment industry.

Monitoring, Assessing and Educating

Ecologist

Ecologists study the relationships of living things to one another and to their environment, and examine the effects of a wide range of factors such as population size, rainfall, temperature, forest fires and major construction projects.

Environmental Auditor

Environmental auditors assess the environmental performance of operations in business and industry.

Environmental Education Specialist

Environmental education specialists help create an awareness of the relationship between human activities and the natural environment. They develop and promote strategies that encourage others to make responsible choices regarding consumer decisions, government policies and corporate responsibilities.

Environmental Engineer

Environmental engineers design systems, processes and equipment for air, water and soil pollution assessment, prevention and control, solid and hazardous waste management, and the remediation of contaminated sites.

Hazardous Waste Management Technologist

Hazardous waste management technologists provide information and advice on the packaging, handling and disposal of toxic wastes; conduct inspections and waste audits; investigate environmental incidents; and monitor and control the clean-up of contaminated land, water and air.

Pollution Control Technologist

Pollution control technologists conduct inspections, tests and field investigations to determine the extent of existing air, water or soil contamination and find ways to control and prevent contamination.

Other Environment-Related Profiles

Agricultural Engineer

Agricultural engineers integrate engineering science and design with applied biological science to solve problems in agriculture, food and other resource industries.

Biochemist

Biochemists study the chemical make-up of living matter and the molecular basis for processes that occur in cells. They develop medical, agricultural, food science, pharmacological, industrial, environmental and other practical applications.

Biological Technician

Biological technicians perform routine analysis and technical duties in the field, in the laboratory or

both. They provide technical support and services for scientists and engineers working in fields such as agriculture, environmental science, resource management, plant and animal biology, microbiology, cell and molecular biology and health sciences.

Biologist

Biologists conduct research to learn more about living organisms and ecosystems, manage natural resources, and develop new practices and products in such diverse fields as environmental conservation, forensics and pest control.

Biotechnologist

Biotechnologists apply their knowledge of biochemistry, microbiology and molecular genetics to improve industrial processes and develop new processes in the agricultural, chemical and health care product industries (for example, in the production of drugs, antibiotics or vaccines).

Chemical Engineer

Chemical engineers develop processes, design equipment and provide technical and management services for plants that convert raw materials into a wide range of end products (e.g. chemicals, pharmaceuticals, food products, fuels, plastics, metals).

Chemical Engineering Technologist

Chemical engineering technologists are involved in process design, plant engineering, environmental control, engineering sales and plant operations. They may work independently or in an engineering team.

Chemical Technologist

Chemical technologists may work independently or with a team of chemists, chemical engineers and related professionals involved in quality control testing, product research and development, or environmental analysis.

Chemist

Chemists conduct research and develop new or improved products and processes, and test and evaluate their quality and safety.

Civil Engineer

Civil engineers plan, design and supervise the construction, maintenance and decommissioning of a wide variety of public and private structures and facilities.

Civil Engineering Technologist

Civil engineering technologists work with engineers, architects, surveyors and contractors in designing, developing and building civil engineering projects that are economical and functional and satisfy applicable standards and building codes.

Conservation Officer

Conservation officers manage resources, visitor services, maintenance and recreation in provincial parks and educate the public about related issues.

Entomologist

Entomologists study the classification, life cycle and habits of insects and related life forms, and plan and implement insect surveys and pest management programs.

Food Science Technologist

Food science technologists work independently or provide technical support in laboratory analysis, food product development, processing, quality assurance or regulatory positions.

Food Scientist

Food scientists investigate the chemical, microbiological, physical and sensory nature of food, and

apply their knowledge in the development, processing, preserving, packaging, distributing and storing of foodstuffs.

Forest Technician

Forest technicians perform technical functions related to forest management, silviculture, harvesting, and conservation and protection.

Forest Technologist

Forest technologists perform many of the technical functions involved in the scientific management of forested areas.

Forester

Foresters plan, administer and direct programs related to managing forested lands and related renewable resources.

Geneticist

Geneticists conduct research into the biochemical and physiological aspects of heredity, particularly the role of deoxyribonucleic acid (DNA), and carry out cytogenetic or molecular tests to aid in diagnosing disease.

Geographer

Geographers study the interactions between the distinctive, dynamic features and characteristics of the biosphere and of the human organization of activity within it. They may specialize in particular phenomena or regions at various scales of analysis.

Geological and Geophysical Technologist

Geological and geophysical technologists may work independently or with a team of geologists, geophysicists, mining engineers or petroleum engineers.

Geologist

Geologists study the nature and history of the Earth's crust and apply their knowledge in exploring for minerals and hydrocarbons (e.g. oil and gas), developing resources for production, building engineering foundations and stable slopes, finding and evaluating ground water supplies and conducting environmental investigations.

Geomatics/Surveying Engineer

Geomatics/surveying engineers gather, model, analyze and manage spatially-referenced data (information identified according to location).

Geomatics/Surveying Technologist

Geomatics technologists conduct or participate in field surveys, office calculations and plan production to determine the exact locations and relative positions of natural features and man-made structures on the earth's surface, underground or underwater.

Hydrologist

Hydrologists study the distribution and circulation of water in the atmosphere, on the earth's surface and in soil and underlying rocks.

Hydrometric Technician/Technologist

Hydrometric technicians and technologists may work independently or provide technical support for hydrologists and related scientists and engineers.

Interpretive Naturalist

Interpretive naturalists explain the natural and scientific features of parks, botanical gardens and wilderness areas to visitors.

Meteorologist

Meteorologists study the physics, chemistry and dynamics of the atmosphere and its interaction with land and water surfaces, weather, climate, climate change and their effect on people's health and safety, the economy and the earth's ecosystems.

Microbiologist

Microbiologists study the growth and characteristics of micro-organisms (viruses, bacteria, fungi, parasites) and their interactions with their environment, and develop medical and industrial applications (for example, in the food processing industry).

Municipal Recycling Truck Driver

Municipal recycling truck drivers collect, sort and transport recyclable waste materials such as glass, plastic, metal and paper.

Municipal Recycling Waste Handler

Municipal recycling waste handlers sort recyclable domestic and commercial waste materials such as glass, plastic, metal and paper.

Oceanographer

Oceanographers study all aspects of oceans including their boundaries, contents and role in the earth's climate system.

Park Warden

Park wardens are responsible for natural and cultural resource management, public safety and law enforcement in Canada's national parks.

Pathologist

Pathologists are physicians who diagnose diseases such as cancer and provide key laboratory diagnostic services. Some pathologists also play a key role in forensic investigations.

Pharmacologist

Pharmacologists are biomedical scientists who investigate the mechanisms underlying the effects of drugs and chemicals on living systems. They use this knowledge to help design and evaluate chemical agents for the prevention and treatment of disease.

Physicist

Physicists investigate why our physical environment behaves as it does and solve technological problems.

Physiologist

Physiologists are scientists who study the whole organism and cellular functioning in humans, animals and plants.

Public Health Inspector

Public health inspectors prevent disease and promote health by educating people about public health issues and enforcing health legislation.

Soil Scientist

Soil scientists study the composition, distribution, development and behaviour of soils and the interaction of soils with soil organisms, animals and plants.

Toxicologist

Toxicologists investigate the possible harmful effects on living things of chemical agents (e.g. drugs, pesticides, food additives), physical agents (e.g. ionizing and electro-magnetic radiation) and biological agents (e.g. plant and animal toxins).

Urban, Regional and Park Planners

Urban, regional and park planners study the social, economic, political and physical conditions of urban and rural communities, and develop plans for the overall management and protection of specific land parcels or regions.

Water and Wastewater Treatment Plant Operator

Water and wastewater treatment plant operators monitor and operate control systems and equipment in water purification and treatment plants, and wastewater, sewage treatment and liquid waste plants.

Indirectly Related Profiles

People in the following occupations may work for organizations in the environment industry (e.g. agencies and government departments involved in environmental research, education, regulation, monitoring or impact assessment; or companies that provide environment-related services or products).

Accountant

Accounting Technician

Finance, Insurance and Real Estate Industry

Many occupational profiles describe work in financial, insurance and real estate companies. Following are four lists:

1. profiles about occupations involved in making or facilitating financial transactions
2. profiles about occupations involved in providing insurance services
3. profiles about occupations involved in appraising, managing, renting and selling real estate
4. indirectly related profiles about other types of work done in organizations that provide financial, insurance and real estate services.

Financial Transactions

Accountant

Accountants provide financial reporting and consulting services for organizations and individuals.

Accounting Technician

Accounting technicians maintain systematic records of business transactions and verify and record those transactions. They use computers to calculate, prepare and process invoices, accounts payable and receivable, budget documents and other routine financial records.

Banking/Investment Manager

Banking and investment managers plan and direct the activities of departments or branches in financial establishments such as banks, credit unions, trust companies, mortgage firms and mutual fund investment companies.

Credit/Loans Manager

Credit managers gather and analyze financial information about loan applications and business conditions, and approve or reject credit applications. They work in credit-granting organizations such as oil companies, banks, credit unions, retail stores, hotels and finance companies.

Financial Analyst

Financial analysts collect, evaluate and apply financial, economic and statistical data to analyze and evaluate investment opportunities, or make financial decisions and recommendations.

Financial Customer Service Representative

Financial customer service representatives promote their financial institution's products and services, open and close accounts, keep records of transactions, accept payments, and receive and pay out money.

Financial Planner

Financial planners develop personal financial plans for individuals and families. They analyze clients' net worth, financial resources, lifestyle preferences and goals, and make recommendations regarding how clients can achieve their financial goals.

Internal Auditor

Internal auditors conduct financial, systems and operational audits in their organizations. (External auditors are usually accountants who are not part of the organization being audited.)

Investment Advisor

Investment advisors assist clients by providing investment advice and recommending the purchase or sale of securities. Taking into account a client's income, assets, age, tax burden and financial expectations, investment advisors help the client identify financial goals and recommend investments to assist in achieving those goals.

Investment Underwriter

Investment underwriters help governments and corporations raise capital by providing financial

advice and underwriting or distributing new securities.

Mortgage Agent

Mortgage agents help clients locate funding for mortgage financing and find the best rates, and provide advice regarding the best approaches to take with lenders.

Insurance Services

Actuary

Actuaries apply their knowledge of mathematics (particularly probability, statistics and risk theory) to financial problems involving future uncertainty. These uncertainties may be associated with life or property/casualty insurance, annuities, pension or other employee benefit plans.

Insurance Adjuster

Insurance adjusters investigate insurance claims, make recommendations regarding the payment of benefits from insurance policies, and negotiate payments and settlements.

Insurance Agent/Broker

Insurance agents and brokers assess people's financial needs and advise them on how to protect themselves against financial loss. They may sell life, property, casualty, automobile or health insurance policies to individuals, businesses or public institutions.

Insurance Underwriter

Insurance underwriters evaluate the risks involved in applications for insurance and, on behalf of the insurance company, decide whether or not to accept those risks. They may work for life insurance companies or general insurance companies.

Real Estate Services

Assessor

Assessors determine the value of land, buildings, businesses, structures and certain types of equipment for property tax purposes.

Building Operator

Building operators are responsible for the day-to-day maintenance and operation of large buildings that have complex heating, mechanical and electrical systems.

Building Superintendent

Building superintendents maintain and manage commercial, institutional and residential properties.

Property Manager

Property managers oversee the administration, maintenance, operation and improvement of residential, commercial and industrial properties and represent the interests of property owners.

Real Estate Agent

Real estate agents sell, lease and rent houses, apartments, commercial buildings, land and other real estate for clients on a commission basis.

Real Estate Appraiser

Real estate appraisers estimate the value of vacant and improved residential, commercial, industrial, agricultural and other real estate.

Indirectly Related Profiles

People in the following occupations may work for financial, insurance or real estate companies.

Administrative Assistant

Arbitrator

Building Operator
Call Centre Agent
Collection Agent

Food and Beverage Products Manufacturing Industry

A number of occupational profiles describe work in the food and beverage products manufacturing industry. Following are three lists:

1. profiles about occupations involved in manufacturing food and beverage products for human or animal consumption
2. profiles about other occupations related to manufacturing food and beverage products
3. indirectly related profiles about other types of work performed in this industry.

Manufacturing Food and Beverage Products

Agricultural Products Processing Machine Operator

Agricultural products processing machine operators run machines that process and package food and beverage products.

Baker

Bakers prepare and bake breads, cakes, cookies, pastries, pies and other baked goods.

Feed Mill Production Worker

Feed mill production workers operate machines that clean, separate, crush, grind, mix, pellet and bag grains for animal and poultry feed.

Food and Nutrition Manager

Food and nutrition managers provide nutrition care and supervise food service operations in health care settings and commercial food service establishments.

Food Science Technologist

Food science technologists work independently or provide technical support in laboratory analysis, food product development, processing, quality assurance or regulatory positions.

Food Scientist

Food scientists investigate the chemical, microbiological, physical and sensory nature of food, and apply their knowledge in the development, processing, preserving, packaging, distributing and storing of foodstuffs.

Meat Cutter

Meat cutters prepare standard cuts of meat, poultry and fish, and products such as sausage in processing plants or retail food establishments.

Related Profiles

Automated Systems Technologist

Automated systems technologists analyze, implement, maintain and design electro-mechanical (automated) systems. These systems often include mechanical components, sensors, actuators and control systems and may include stationary or mobile robots.

Chemical Technologist

Chemical technologists may work independently or with a team of chemists, chemical engineers and related professionals involved in quality control testing, product research and development, or environmental analysis.

Customs Broker

Customs brokers are employed by importers and exporters to clear goods through customs and ensure their timely delivery. They may also be involved in logistics or supply chain management.

Dietitian

Dietitians develop, implement and evaluate food and nutrition strategies to promote health and treat disease; manage food service systems; and develop and deliver related programs and policies.

Home Economist

Home economists enhance people's quality of life by providing advisory, counselling, management, promotion and education services related to money management, consumer education, foods and nutrition, home design, clothing and textiles, and family function.

Industrial Designer

Industrial designers conceptualize and produce designs for a wide variety of products and systems (e.g. furniture, electronics, appliances, tools, automobiles, sporting goods, architectural details, signage).

Industrial Engineer

Industrial engineers determine the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

Industrial Engineering Technologist

Industrial engineering technologists gather and analyze information about how people, machines and materials are used in organizations to ensure that products and services are delivered in the most cost effective and timely manner possible.

Instrument Technician

Instrument technicians install, maintain and repair the measuring and control instruments used in industrial and commercial processing.

Manufacturing Engineer

Manufacturing engineers design, implement, direct and co-ordinate manufacturing system materials and processes to achieve the most efficient, cost effective and high quality production possible in a safe and environmentally responsible manner.

Mechanical Engineer

Mechanical engineers research, design and evaluate machines, devices, equipment, systems and processes, and plan and oversee their development, installation, operation and maintenance.

Mechanical Engineering Technologist

Mechanical engineering technologists may work independently or with mechanical engineers in designing, drawing, developing and modifying various types of products, machines, mechanical systems and manufacturing processes.

Millwright

Millwrights install, maintain, repair and troubleshoot stationary industrial machinery and mechanical equipment in factories, production plants and recreational facilities.

Operations Manager

Operations managers direct and co-ordinate the operation of manufacturing, service delivery and production departments in industrial, commercial and government organizations.

Operations Research Analyst

Operations research analysts use mathematical modelling and information technology to develop decision support systems for decision-makers in public and private organizations.

Power Engineer

Power engineers supervise, operate and maintain machinery and boilers that provide power, heat, refrigeration and other utility services to heavy industry and large building complexes.

Safety Officer

Safety officers facilitate the development, implementation and maintenance of workplace safety programs.

Sales Representative (Wholesale, Nontechnical)

Wholesale, nontechnical sales representatives sell their organizations' nontechnical goods and services to retail, commercial, industrial and professional clients.

Traffic Manager

Traffic managers direct and co-ordinate the transportation of incoming materials from suppliers or raw material sources and outgoing products to distribution houses and customers.

Warehousing Professionals

Warehousing professionals are responsible for general warehousing activities such as shipping and receiving and planning and managing the flow of goods into, within and from organizations.

Indirectly Related Profiles

People in the following occupations may be employed by food and beverage manufacturers.

Accountant

Accounting Technician

Administrative Assistant

Computer and Network Operator

Computer Programmer

Cook

Custodian

Human Resources Professional

Lawyer

Management Consultant

Marketing Manager

Purchasing Agent

Receptionist

Forestry and Logging Industry

A number of occupational profiles describe work in the forestry and logging industry. Following are three lists:

1. profiles about occupations directly involved in forestry and logging operations
2. profiles about other occupations related to forestry and logging
3. indirectly related profiles about other types of work required in the forestry and logging industry.

Forestry and Logging Operations

Forest Technician

Forest technicians perform technical functions related to forest management, silviculture, harvesting, and conservation and protection.

Forest Technologist

Forest technologists perform many of the technical functions involved in the scientific management of forested areas.

Forester

Foresters plan, administer and direct programs related to managing forested lands and related renewable resources.

Logging/Forestry Equipment Operators

Logging/forestry equipment operators use machinery and equipment to fell, process and load trees at logging sites.

Profiles of Related Occupations

Arborist

Arborists, sometimes called tree care specialists or tree service technicians, maintain healthy trees and treat or remove injured and diseased trees.

Biological Technician

Biological technicians perform routine analysis and technical duties in the field, in the laboratory or both. They provide technical support and services for scientists and engineers working in fields such as agriculture, environmental science, resource management, plant and animal biology, microbiology, cell and molecular biology and health sciences.

College, Technical or Vocational Instructor

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

Conservation Officer

Conservation officers manage resources, visitor services, maintenance and recreation in provincial parks and educate the public about related issues.

Environmental Auditor

Environmental auditors assess the environmental performance of operations in business and industry.

Environmental Engineer

Environmental engineers design systems, processes and equipment for air, water and soil pollution assessment, prevention and control, solid and hazardous waste management, and the remediation of contaminated sites.

Heavy Equipment Operator

Heavy equipment operators use a variety of mobile machines and attachments to excavate, grade and landscape earth or move workers, materials and equipment.

Land Surveyor

Land surveyors plan, direct and conduct legal surveys to determine and interpret the location of boundaries, contours and other natural or human-made features.

Landscape Architect

Landscape architects combine artistic and creative perspectives with scientific and engineering knowledge to create, manage and conserve environments that are both functional and attractive. Their goal is to create harmony between natural environments, land features and architectural structures.

Landscape Architectural Technologist

Landscape architectural technologists assist landscape architects, architects, and other professional designers and planners in designing and developing outside and inside environments. Projects may range from assisting in planning public parks to developing inner courtyard spaces in shopping malls.

Landscape Gardener

Landscape gardeners work with other trades to carry out landscaping operations and design in a variety of environments. These environments include residential, commercial and public grounds, playgrounds, golf courses, garden centres, tree nurseries, greenhouses and interior landscapes.

Park Warden

Park wardens are responsible for natural and cultural resource management, public safety and law enforcement in Canada's national parks.

Turfgrass Management Specialist

Turfgrass management specialists maintain and manage grass and related areas and facilities, and assist in the design and construction of landscape projects.

University Professor

University professors are employed by degree-granting institutions to teach and produce works of art or conduct research and publish their research findings.

Urban, Regional and Park Planners

Urban, regional and park planners study the social, economic, political and physical conditions of urban and rural communities, and develop plans for the overall management and protection of specific land parcels or regions.

Health Care and Social Assistance Industry

Many occupational profiles describe work in the health care and social assistance industry. Following are four lists:

1. profiles about occupations involved in diagnosis, treatment and other aspects of health care
2. profiles about occupations involved in providing social assistance services
3. profiles about other occupations related to health care and social assistance
4. indirectly related profiles about other types of work performed in the health care and social assistance industry.

Diagnosis and Treatment

Acupuncturist

Acupuncturists diagnose patients' diseases, physiological disorders and injuries according to traditional Chinese medical theories, and treat them by inserting acupuncture needles or by using other methods of stimulating different points on the body.

Addictions Counsellor

Addictions counsellors help individuals, families and communities identify and deal with addictions through treatment and prevention programs.

Athletic Therapist

Athletic therapists work with other health care professionals to advise athletes and coaches on the prevention and treatment of sports injuries, or treat members of the public who have musculoskeletal injuries.

Audiologist

Audiologists work with children and adults to prevent, assess, diagnose and provide treatment and counselling for hearing and balance disorders.

Cardiology Technologist

Cardiology technologists perform and interpret cardiology tests to provide information needed in the diagnosis and treatment of heart disease.

Chiropractic Assistant

Chiropractic assistants perform a variety of support tasks to assist chiropractors with patient care.

Chiropractor

Chiropractors are health professionals concerned with the diagnosis, treatment and prevention of mechanical disorders of the musculoskeletal system and the effects of these disorders on the function of the nervous system and general health. They emphasize manual treatments including spinal manipulation and adjustment.

Combined Laboratory and X-Ray Technologist

Combined laboratory and x-ray technologists conduct routine medical laboratory tests, perform radiography and electrocardiograms and set up, clean and maintain related equipment.

Community Health Nurse

Community health nurses provide professional nursing services for individuals, families, communities and groups in a variety of settings.

Dental Assistant

Dental assistants work with health care professionals and related agencies in any or all of the following capacities: chairside assistant, intra-oral assistant, administrative assistant, community

health assistant, dental education and research assistant.

Dental Hygienist

Dental hygienists assess, diagnose and treat oral health conditions through the provision of therapeutic, educational and and preventative dental hygiene procedures and strategies to promote wellness.

Dentist

Dentists, also called doctors of dental surgery (D.D.S.) or doctors of medical dentistry (D.M.D.), diagnose, treat, prevent and control dental and orofacial disease.

Diagnostic Medical Sonographer

Diagnostic medical sonographers operate ultrasound equipment to produce and record images of body organs and masses including the fetus.

Dietitian

Dietitians develop, implement and evaluate food and nutrition strategies to promote health and treat disease; manage food service systems; and develop and deliver related programs and policies.

Electroneurophysiology (ENP) Technologist

Electroneurophysiology (ENP) technologists use sensitive electronic equipment to record and evaluate the electrical activity of patients' central and peripheral nervous systems to assist physicians in diagnosing diseases, injuries and abnormalities.

Emergency Medical Responder

Emergency medical responders (EMRs) provide pre-hospital emergency medical care and transportation for the sick and injured.

Emergency Medical Technician - Ambulance

Emergency medical technicians - ambulance (EMT-As) provide pre-hospital emergency medical care at the basic life support level as well as transportation for the sick and injured.

Emergency Medical Technologist - Paramedic

Emergency medical technologist - paramedics (EMT-Ps) provide pre-hospital emergency medical care at the advanced life support level as well as transportation for the sick and injured.

Expressive Arts Therapists

Expressive arts therapists use artistic media to help clients maintain and improve their physical and mental health by recognizing and developing often-untapped inner resources.

Geriatric Medicine Specialist

Geriatric specialists, sometimes called geriatricians, are physicians who specialize in preventing, diagnosing and treating diseases and disorders of the elderly and who act primarily as consultants for other medical doctors.

Gerontological Specialist

Gerontological specialists are professionals who specialize in working with older adults.

Herbalist

Herbalists advise people about the use of herbs and dietary supplements to maintain good health and relieve symptoms related to conditions such as arthritis, rheumatism, asthma, skin disorders or stomach ailments.

Homeopath

Homeopaths promote wellness by suggesting lifestyle changes and treat ailments by administering small doses of natural substances that cause similar symptoms.

Licensed Practical Nurse

Licensed practical nurses provide care for individuals, families and groups in a variety of health care settings. They may practice independently or as part of a health care team.

Licensed Practical Nurse (Advanced Orthopaedic Specialty)

Licensed practical nurses (LPNs) in the advanced orthopaedic specialty apply, adjust and remove a variety of casts, commercial splints/braces, bandages and traction. They work as part of health care teams in emergency departments, cast rooms, orthopaedic surgical wards and medical clinics.

Magnetic Resonance Technologist

Magnetic resonance technologists operate medical diagnostic equipment that uses magnetic fields and radio waves to produce images of the body.

Massage Therapist

Massage therapists assess the soft tissue and joints of the body and administer massage treatments to relieve pain and symptoms of stress, or to develop, maintain, rehabilitate or augment physical function.

Medical Laboratory Technologist

Medical laboratory technologists perform a variety of laboratory tests and procedures to assist physicians in diagnosing, monitoring, treating and preventing disease.

Mental Health Worker

Mental health workers help people deal with personal and social problems by teaching related skills and providing information and support.

Midwife

Midwives are primary health care profesionals who provide continuity of care for women and babies throughout pregnancy, birth and six weeks after birth.

Naturopathic Doctor

Naturopathic doctors, sometimes called naturopaths, naturopathic practitioners or naturopathic physicians, use natural, non-toxic healing therapies to treat patients' diseases and disorders.

Nuclear Medicine Technologist

Nuclear medicine technologists operate specialized equipment that maps the distribution of radioactive tracers and tagged compounds to assist in the diagnosis and treatment of disease.

Nurse Practitioner

Nurse practitioners are registered nurses who have advanced training in health assessment, health promotion and illness prevention. They diagnose and treat health problems, order and interpret tests, and prescribe drugs.

Occupational Health Nurse

Occupational health nurses are registered nurses who are employed by businesses to promote employee health, prevent disease and injury, provide first aid and nursing care when required, and facilitate the rehabilitation of sick or injured employees.

Occupational Therapist

Occupational therapists help people whose capabilities have been impaired by physical or mental illness or injury, emotional or developmental problems, or the aging process to improve their ability to function in everyday life. They assist people in caring for themselves, returning to work and resuming community activities.

Occupational Therapist Assistant

Occupational therapist assistants, sometimes called rehabilitation/therapy aides or attendants, assist

occupational therapists in the implementation of treatment programs designed to develop, improve or maintain clients' abilities to function independently.

Optometrist

Optometrists examine patients' eyes, diagnose diseases and disorders of the eye and associated structures, prescribe and dispense eyeglasses and contact lenses, prescribe therapeutic drugs and recommend appropriate treatments.

Pathologist

Pathologists are physicians who diagnose diseases such as cancer and provide key laboratory diagnostic services. Some pathologists also play a key role in forensic investigations.

Pediatrician

Pediatricians are specialist physicians who provide medical care for children from birth through adolescence.

Personal Care Attendant

Personal care attendants provide personal assistance and support services for elderly, disabled, acute or chronically ill people who require short term assistance or ongoing support.

Pharmacist

Pharmacists provide services and programs that are designed to promote health and well-being, and treat disease and other disorders through drug therapy, wellness promotion and disease state management.

Pharmacy Assistant/Technician

Pharmacy assistants and technicians assist pharmacists by compounding, packaging and labelling pharmaceutical products, and maintaining prescription records and inventories of medications and pharmaceutical products.

Physical Therapy Assistant

Physical therapy assistants assist physiotherapists in the implementation of treatment programs designed to improve or maintain clients' abilities to function independently.

Physician

Physicians, sometimes called medical doctors, are licensed to diagnose and treat patients' diseases, physiological and psychiatric disorders, injuries and other health-related problems.

Physiotherapist

Physiotherapists work with patients to plan and carry out individually designed physical treatment programs to restore function and prevent disability from disease, trauma or injury.

Podiatrist

Podiatrists diagnose and treat diseases, deformities and injuries of the human foot and help patients prevent foot-related disorders.

Psychiatric Aide

Psychiatric aides work under the direct supervision of health care professionals caring for people who are mentally ill, developmentally handicapped, cognitively impaired or brain injured.

Psychiatric Nurse

Psychiatric nurses provide professional nursing and mental health nursing services in mental health care facilities and in the community. They promote and help people restore and maintain good mental health.

Psychiatrist

Psychiatrists are physicians (medical doctors) who specialize in the diagnosis and treatment of mental illness and emotional disorders, and act as consultants for other physicians.

Psychologist

Psychologists assess, diagnose and treat psychological, emotional and behavioural disorders. They also research and apply theories relating to behaviour and mental processes.

Radiation Therapist

Radiation therapists administer prescribed treatments for cancer patients that involve using ionizing radiation (e.g. x-rays, gamma rays or electrons).

Radiological Technologist

Radiological technologists operate x-ray equipment to produce images that are used to diagnose diseases and injuries.

Recreation Therapist

Recreation therapists encourage and promote independent leisure lifestyles for people who have special needs.

Reflexologist

Reflexologists apply varying degrees of finger pressure or laser light to specific spots on clients' feet, hands, ears, face, scalp or other parts of the body to improve health and well-being.

Registered Nurse

Registered nurses provide professional nursing services for individuals, families, groups and communities, deliver health-education programs and provide consultative nursing services to promote, maintain and restore patient health.

Rehabilitation Practitioner

Rehabilitation practitioners help children and adults who have disabilities to become more independent and live active lives as participating members of the community. They usually work as part of a team to assess, design and implement intervention and teaching activities which address individuals' residential, educational, social, employment and recreational needs.

Respiratory Therapist

Respiratory therapists assist physicians in diagnosing, treating, educating and promoting wellness in patients who have respiratory and associated disorders.

Speech-Language Pathologist

Speech-language pathologists work with children and adults to prevent, assess, diagnose and provide treatment and counselling for speech, language, voice and swallowing disorders.

Sport Medicine Physician

Sports physicians are medical doctors who specialize in the prevention, recognition, diagnosis and treatment of injuries and diseases related to sports activities.

Social Assistance Services

Child and Youth Care Worker

Child and youth care workers work to improve the physical, emotional, intellectual and social development of vulnerable children and adolescents.

Community Health Representative

Community health representatives promote wellness, the protection of health and the prevention of injury and illness in community settings.

Early Childhood Educator

Early childhood educators work with infants, toddlers, preschool and school-aged children in a variety of settings.

Recreation Co-ordinator/Supervisor

Recreation co-ordinators administer and oversee recreation programs and leisure services.

Social Worker

Social workers help individuals, families, groups, communities and organizations develop the skills and resources they need to enhance their social functioning and social environments.

Volunteer Manager

Volunteer managers plan volunteer involvement in organizations and co-ordinate volunteer programs in a variety of settings.

Related Profiles

Biologist

Biologists conduct research to learn more about living organisms and ecosystems, manage natural resources, and develop new practices and products in such diverse fields as environmental conservation, forensics and pest control.

Biomedical Engineering Technologist

Biomedical engineering technologists maintain and repair the biomedical equipment that physicians, nurses and other medical personnel use to monitor, diagnose and treat medical conditions.

Biotechnologist

Biotechnologists apply their knowledge of biochemistry, microbiology and molecular genetics to improve industrial processes and develop new processes in the agricultural, chemical and health care product industries (for example, in the production of drugs, antibiotics or vaccines).

Career Development Professional

Career development professionals advise, coach, provide information and support people who are planning, seeking and managing their life/work direction.

College, Technical or Vocational Instructor

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

Correctional Services Worker

Correctional services workers supervise adult and young offenders and administer a wide variety of correctional programs and services.

Dental Technologist

Dental technologists fabricate, duplicate, alter and repair prosthetic and orthodontic dental devices.

Denturist

Denturists are dental health professionals who specialize in the field of removable oral prosthesis (dentures). In partnership with other health care professionals, they assess, design, fabricate, repair and insert complete and removable partial dentures and diagnose related problems.

Educational Counsellor

Educational counsellors advise students on educational, personal and career-related issues and co-ordinate counselling services for students, parents and teachers.

Executive Housekeeper

Executive housekeepers manage the housekeeping and laundry departments in hotels, motels and institutions such as hospitals and schools.

Family/Marriage Counsellor

Family/marriage counsellors provide counselling to help families, couples and individuals resolve interpersonal difficulties, develop effective and satisfactory relationships, and build meaningful support systems.

Food and Nutrition Manager

Food and nutrition managers provide nutrition care and supervise food service operations in health care settings and commercial food service establishments.

Fundraiser

Fund-raisers, sometimes called development officers, plan and organize annual fund-raising programs, special gift appeals and campaigns to raise money for particular groups or causes (e.g. community agencies, arts organizations, educational institutions, hospitals and other non-profit organizations).

Geneticist

Geneticists conduct research into the biochemical and physiological aspects of heredity, particularly the role of deoxyribonucleic acid (DNA), and carry out cytogenetic or molecular tests to aid in diagnosing disease.

Health Information Management Professional

Health information management professionals manage the collection, recording and transmission of health information. They translate information from paper documents to electronic records or integrate information into databases, interpret data, and ensure security and access to health information guidelines are followed.

Health Service Administrator

Health service administrators plan, organize, direct, co-ordinate and evaluate health programs and services that promote health and provide care to individuals, groups and communities.

Hearing Aid Practitioner

Hearing aid practitioners evaluate clients' hearing acuity, sensitivity and communication, and select, fit, service and repair hearing instruments.

Kinesiologist

Kinesiologists study human movement and look for ways to improve the efficiency and performance of the human body at work, in sport and in daily life.

Life Skills Coach

Life skills coaches lead experiential learning groups. They prepare learners to deal effectively with personal issues by guiding them through activities such as self discovery and behaviour identification exercises.

Medical Secretary

Medical secretaries support doctors and other health care professionals by performing a wide variety of clerical and administrative tasks such as scheduling appointments, word processing, bookkeeping/accounting, photocopying, filing and answering telephone calls and correspondence.

Medical Transcriptionist

Medical transcriptionists are medical language specialists who interpret and transcribe medical dictation that details patient care during and after an illness or injury.

Ophthalmic Assistant

Ophthalmic assistants assist ophthalmologists (eye surgeons) with patient care.

Optical Technician

Optical technicians manufacture, assemble and repair eyeglasses according to prescriptions from optometrists or ophthalmologists.

Optician

Opticians, sometimes called ophthalmic dispensers, fit and adapt eye glasses, contact lenses, low vision aids and other optical appliances according to prescriptions.

Parole/Probation Officer

Parole officers and probation officers help offenders integrate into the community and, at the same time, protect the community by supervising offenders. Parole officers are employed by Correctional Services Canada to manage the conditional release of federal and provincial offenders. Probation officers are employed by Alberta Solicitor General to conduct investigations and prepare predisposition and presentence reports, and supervise offenders in the community.

Pharmacologist

Pharmacologists are biomedical scientists who investigate the mechanisms underlying the effects of drugs and chemicals on living systems. They use this knowledge to help design and evaluate chemical agents for the prevention and treatment of disease.

Physiologist

Physiologists are scientists who study the whole organism and cellular functioning in humans, animals and plants.

Prosthetic/Orthotic Technician

Prosthetic/orthotic technicians work with prosthetists and orthotists in the production, fabrication and repair of prostheses (artificial limbs) and orthoses (braces and supports) that are used to support weakened body parts, correct body defects or replace amputated limbs.

Prosthetist and Orthotist

Prosthetists and orthotists work from physicians' prescriptions to design, fabricate, fit and repair prosthetic devices (artificial limbs) and orthotic devices (braces and supports) which are used to support weakened body parts, correct body defects or replace lost limbs.

Recreation Therapist

Recreation therapists encourage and promote independent leisure lifestyles for people who have special needs.

Religious Leader

Religious leaders, including ministers, rabbis, imam, priests, pastors, chaplains, bishops, curates and leaders in other religious communities, conduct religious services and provide inspirational, philosophical and religious education and guidance to members of their communities.

Special Needs Teacher

Special needs teachers work primarily with children who require special instructional services to help them learn and develop to their potential.

Sterile Processing Technician

Sterile processing technicians gather, disassemble, clean, assemble, sterilize, store and distribute hospital instruments, supplies and equipment for re-use.

Toxicologist

Toxicologists investigate the possible harmful effects on living things of chemical agents (e.g. drugs, pesticides, food additives), physical agents (e.g. ionizing and electro-magnetic radiation) and

biological agents (e.g. plant and animal toxins).

Unit Clerk

Unit clerks perform a variety of reception, clerical and administrative tasks at nursing stations on the units or wards of hospitals, continuing care centres and other medical facilities.

University Professor

University professors are employed by degree-granting institutions to teach and produce works of art or conduct research and publish their research findings.

Volunteer Manager

Volunteer managers plan volunteer involvement in organizations and co-ordinate volunteer programs in a variety of settings.

Indirectly Related Profiles

People in the following occupations may use related knowledge in their work (e.g. medical illustrators) or work in health care or social assistance settings.

Accountant

Information, Culture and Recreation Industry

Many occupational profiles describe work in the information, culture and recreation industry. Following are seven lists:

1. profiles about occupations involved in providing information services
2. profiles about occupations in publishing, motion picture/sound recording, broadcasting or telecommunications
3. profiles about work involved in the production, preservation or exhibition of artistic, cultural or historic objects
4. profiles about live performance occupations
5. profiles about recreation and sport occupations
6. profiles about other occupations related to information, culture or recreation
7. indirectly related profiles about other types of work performed in information, culture or recreation organizations.

Information Services

Archivist

Archivists appraise, acquire, arrange, describe, preserve and facilitate the research of records that have ongoing value.

Data Administrator

Data administrators develop and implement data administration policy, standards and models.

Database Analyst

Database analysts are computer specialists who design, develop, modify and maintain database management systems to meet specific user needs.

Geomatics/Surveying Engineer

Geomatics/surveying engineers gather, model, analyze and manage spatially-referenced data (information identified according to location).

Librarian

Librarians assess the informational, educational, cultural and recreational needs of the community they serve, find resources to meet those needs, and provide access to and manage resources.

Library Clerk

Library clerks help librarians and library technicians by serving library users and performing many of the clerical tasks involved in library work.

Library Technician

Library technicians support and assist librarians by performing technical tasks involved in library work such as collection management, cataloguing and document delivery. They also provide reference services and may manage small corporate, school or public libraries.

Web Designer

Web designers create websites for the Internet and sites internal to their organizations.

Webmaster

Webmasters are responsible for the design, development, maintenance and success of World Wide Web sites on the Internet and sites internal to their organizations.

Publishing, Motion Picture/Sound Recording, Broadcasting and Telecommunications

Advertising Copywriter

Advertising copywriters write advertisements for print, outdoor and broadcast media, and write copy for Internet home pages and CD-ROM applications.

Animator

Animators create the illusion of movement by manipulating sequences of still images. They may use a variety of materials and techniques including computer software, drawings on paper and three-dimensional sculptures.

Announcer

Announcers read news, sports, weather, commercial and public service messages, and host live events as well as entertainment and information programs for broadcast on radio or television.

Broadcast Maintenance Technologist

Broadcast maintenance technologists install, test, inspect, modify, repair and maintain radio and television broadcasting systems.

Cartoonist

Cartoonists are artists who create cartoon-style illustrations for newspapers, advertisements, magazines, films, television, books, newsletters and greeting cards.

Casting Director

Casting directors are hired on contract by film, video, television and advertising companies to find suitable actors to audition for particular parts or characters. Directors or producers have the final say in who is hired for each part.

Cinematographer

Cinematographers use camera, lighting and related equipment to create the desired visual mood or "feel" for a film or video production.

Critic

Critics review and analyze artistic and literary works and live performances. They may communicate their opinions via radio, television, newspapers, magazines, websites or books.

Editor

Editors help writers, publishers and others prepare written text that is accurate, appealing and effective for publication or broadcast.

Electronics Assemblers and Fabricators

Electronics assemblers and fabricators mount, secure, interconnect and adjust parts and components to assemble and fabricate electronic equipment.

Film Director

Film directors develop an artistic vision for a film production and work with others to implement that vision.

Graphic Designer

Graphic designers translate verbal and abstract concepts into meaningful visual communication.

Illustrator

Illustrators research and create drawings and pictures to visually portray their own or other people's ideas. They may create illustrations for items such as commercial packaging, games, magazines, storybooks, medical textbooks, annual reports, brochures or advertisements.

Lighting Technician

Lighting technicians set up, maintain and operate light fixtures, control devices and the associated

electrical and rigging equipment used for television, motion picture, and theatre and stage productions.

Make-Up Artist

Make-up artists prepare performers for stage, television and film appearances and photography shoots by applying make-up to portray a physical character, enhance beauty or create special effects.

Photographer

Photographers use their skills and artistic talent to capture people, products, events, fashion, landscapes, legal evidence and other subjects on film or digital media.

Photographic Processing Technician

Photographic processing technicians develop images and make prints and slides. They also may enlarge and retouch photographs or use computers to manipulate images.

Producer - Film, Radio, Television and Theatre

Producers co-ordinate the making of films, theatre productions, television and radio programs including everything from the initial concept to final production and distribution.

Recording/Sound Engineer

Recording and sound engineers use a variety of techniques and electronic equipment to record, mix, process, manipulate and edit sound.

Reporter

Reporters gather information and write articles for print media (newspapers and magazines) or prepare news items (written, audio or videotaped) for broadcast on radio or television.

Stage Manager

Stage managers co-ordinate everything that happens during a stage performance: actors' movements and lines, props, scenery movements, lighting effects and sound effects. During rehearsals, stage managers co-ordinate schedules for the artistic and technical operation of the production.

Technical Writer

Technical writers translate complex technical information into simpler language. They shape and deliver information to meet the needs of a target audience.

Telecommunications Engineering Technologist

Telecommunications engineering technologists research, design, implement, analyze, manage and integrate wired and wireless voice and data networking and communications devices and systems.

Telephone Operator

Telephone operators operate computerized or conventional telephone systems to complete connections for telephone calls and provide information to customers.

Television Audio/Video Operator

Audio and video operators set up, prepare and operate television audio and video broadcasting equipment.

Television Camera Operator

Television camera operators operate television cameras and related equipment to record news, live events and productions for television broadcast.

Traffic Co-ordinator

Traffic co-ordinators prepare daily program logs (listings of the programming, including commercials, that will be put on the air on particular broadcast days) in the radio and television industry.

Utility Clerk

Utility clerks record information, receive payments, process forms, answer enquiries and handle complaints from the public regarding utility company services and policies.

Production, Preservation and Exhibition

Conservator

Conservators plan, co-ordinate and participate in the preservation and conservation of cultural property (contemporary, historic, prehistoric and enthnographic objects, natural history specimens, archival materials and works of art) and study environmental influences on artifact preservation.

Craftsperson

Craftspersons use artistic and manual skills to design and make objects that may be functional, ornamental or communicative.

Curator

Curators acquire, document, study, interpret, maintain and provide access to collections of artifacts (products of human hands) and/or specimens (natural history items). In smaller museums, historic sites or galleries, they may be responsible for the overall management of the facility. In larger institutions, curators are usually responsible for specific collections or represent particular academic disciplines.

Exhibit Designer

Exhibit designers work with others to research, plan, design and oversee the fabrication and installation of exhibits and displays.

Heritage Interpreter

Heritage interpreters provide information by conducting tours or role playing for visitors to museums, gallery exhibitions and historical, heritage and related sites.

Museum Technician

Museum technicians assist curators, conservators and other museum staff with functions such as researching, developing, managing and conserving museum collections, setting up exhibits and delivering public programs.

Painter/Printmaker

Painters and printmakers express artistic ideas in original paintings, mixed media drawings, etchings and other two-dimensional artistic works.

Sculptor

Sculptors express artistic ideas in original three-dimensional artworks in a wide variety of media, including sound and virtual reality.

Live Performance

Actor

Actors perform roles in dramatic productions on stage, television, radio and in the movies. They also perform in television and radio commercials, and work in media narration and voice-overs.

Choral Conductor

Choral conductors organize, direct and conduct choral groups such as community and school choirs, church choirs, children's choirs, small chamber choirs, college choral ensembles, opera choruses and other groups that specialize in particular periods or styles of music.

Choreographer

Choreographers express ideas through movement. They design dances and create dance movement

for professional dancers and dance companies, dance studios, amateur performing dance companies, musical theatre, opera, fashion shows, film, television productions and special events.

Composer

Composers create and write a wide variety of original music (e.g. symphonies, operas, ballet scores, musical theatre scores, jazz or rock pieces). They also write music for commercial mediums, including advertising jingles and film soundtracks.

Costume Designer

Costume designers plan and create costumes and clothing accessories for theatre, dance, opera, television, video and film productions.

Dancer

Dancers use their bodies to interpret feelings, ideas, moods, music and drama. They may perform alone or with others in a group, before live audiences or in front of television and film cameras.

Instrumental Musician

Instrumental musicians play musical instruments. They perform as soloists or with orchestras, small ensembles or popular bands before live audiences, in recording studios or in workshop situations.

Lighting Designer

Lighting designers design and plan lighting effects for theatre, dance, opera, television, video and film productions.

Lighting Technician

Lighting technicians set up, maintain and operate light fixtures, control devices and the associated electrical and rigging equipment used for television, motion picture, and theatre and stage productions.

Make-Up Artist

Make-up artists prepare performers for stage, television and film appearances and photography shoots by applying make-up to portray a physical character, enhance beauty or create special effects.

Model

Models enhance and promote the sale of consumer goods, new fashion designs and other business products and services.

Music Copyist

Music copyists prepare individual parts (instrumental and vocal) from musical scores. They may copy all of the music on manuscript paper exactly as written by the composer or arranger, or input the correct information into a music copying computer program.

Orchestra/Band Conductor

Orchestra and band conductors produce their own interpretations of musical works by directing performers in musical groups such as chamber orchestras, wind ensembles, concert bands, symphony orchestras, jazz bands and orchestras for ballet and opera performances.

Orchestrator/Arranger

Orchestrators transcribe musical compositions into scores and assign specific passages to particular instruments to add desired variations of sound. **Arrangers** rewrite original musical scores in different musical styles by changing the rhythm, harmony or tempo.

Recording/Sound Engineer

Recording and sound engineers use a variety of techniques and electronic equipment to record, mix, process, manipulate and edit sound.

Set Designer

Set designers design and plan the creation of settings, scenic environments and properties (props) for theatre, dance, opera, television, video and film productions.

Singer

Singers perform musical arrangements as soloists or members of vocal groups or choirs.

Songwriter

Songwriters may compose both the melody and the lyrics (words) to a song or write only the words.

Stage Manager

Stage managers co-ordinate everything that happens during a stage performance: actors' movements and lines, props, scenery movements, lighting effects and sound effects. During rehearsals, stage managers co-ordinate schedules for the artistic and technical operation of the production.

Theatre Director

Theatre directors make artistic decisions about stage productions and consult with producers about everything from selecting the story or idea, the cast and sometimes the crew to overseeing rehearsals.

Recreation and Sport

Athletic Therapist

Athletic therapists work with other health care professionals to advise athletes and coaches on the prevention and treatment of sports injuries, or treat members of the public who have musculoskeletal injuries.

Coach

Coaches recruit, train and instruct athletes to produce the best sports performances possible. Their job titles generally reflect the sport in which they specialize (e.g. hockey coach, baseball coach, swim coach, figure skating coach) or their position relative to others in an organization (e.g. head coach, club coach).

Fitness Instructor

Fitness instructors promote exercise as a healthy lifestyle choice and teach students, privately or in groups, strengthening, endurance, aerobic, flexibility or weight training exercises.

Golf Professional

Golf professionals teach and promote the game of golf and provide related services for golfers. Some golf professionals play tournament golf; others manage golf and recreation facilities.

Outdoor Sport/Recreation Guide

Outdoor sport and recreation guides organize and conduct outdoor activities such as mountain expeditions, rafting trips, hunting trips, fishing trips and trail rides.

Professional Athlete

Professional athletes compete in sports either individually or as team members at the paid professional level.

Recreation and Sport Administrator

Recreation and sport administrators plan, organize and direct sport and recreation programs and services in accordance with policies set by management, owners, boards of directors or executive committees.

Recreation Co-ordinator/Supervisor

Recreation co-ordinators administer and oversee recreation programs and leisure services.

Recreation Facility Operator

Recreation facility operators maintain and supervise the use of recreational facilities ranging from ice arenas and swimming pools to sports fields and tennis courts.

Sports Instructor

Sports instructors teach the basics of a particular sport (e.g. skiing, swimming, baseball) to beginners and recreational athletes, or help experienced athletes further develop their skills.

Sports Official

Sports officials ensure that established rules and regulations are observed at sporting events (games or competitions).

Other Profiles Related to Information, Culture and Recreation

Fashion Designer

Fashion designers create new styles of clothing and accessories such as jewellery, belts, gloves and hats.

Industrial Designer

Industrial designers conceptualize and produce designs for a wide variety of products and systems (e.g. furniture, electronics, appliances, tools, automobiles, sporting goods, architectural details, signage).

Interior Decorator

Interior decorators assist clients in co-ordinating the decorative aspects of interior spaces.

Interior Designer

Interior designers create and enhance interior spaces to improve quality of life, increase productivity and protect public health, safety and welfare.

Kinesiologist

Kinesiologists study human movement and look for ways to improve the efficiency and performance of the human body at work, in sport and in daily life.

Special Event Co-ordinator

Special event co-ordinators plan, organize and co-ordinate conferences, meetings, seminars, exhibitions, trade shows, festivals and other special events.

Tour Guide

Tour guides escort individuals or groups of people on tours and describe points of interest.

Travel Guide

Travel guides escort individuals or groups of people on holiday tours.

University Professor

University professors are employed by degree-granting institutions to teach and produce works of art or conduct research and publish their research findings.

Visual Merchandiser

Visual merchandisers capture consumers' attention through the placement of merchandise, signage and interior displays in retail stores and shopping malls.

Indirectly Related Profiles

People in the following occupations may work in information, culture or recreation settings.

Accountant

Management, Administrative and Other Support Services Industry

Many occupational profiles describe work in organizations that support the day-to-day operations of other organizations by providing specialized services. Following are five lists of profiles about occupations involved in:

1. administering, directing and co-ordinating day-to-day business operations
2. providing maintenance services or cleaning buildings, carpets or clothing
3. providing travel-related services
4. collecting and hauling waste materials, or other waste management activities
5. providing other support services (e.g. pest control, landscaping, trade show co-ordination, investigation or security).

Business Administration Services

Accountant

Accountants provide financial reporting and consulting services for organizations and individuals.

Accounting Technician

Accounting technicians maintain systematic records of business transactions and verify and record those transactions. They use computers to calculate, prepare and process invoices, accounts payable and receivable, budget documents and other routine financial records.

Administrative Assistant

Administrative assistants perform administrative duties ranging from general office tasks to acting as special assistants in particular departments.

Call Centre Agent

Call centre agents respond to questions and inquiries, resolve customer problems and provide information about company policies, products and services over the phone, by fax and via the Internet.

Collection Agent

Collection agents use various strategies to collect money owed on past due accounts including letter writing, telephone calls and credit management.

Fundraiser

Fund-raisers, sometimes called development officers, plan and organize annual fund-raising programs, special gift appeals and campaigns to raise money for particular groups or causes (e.g. community agencies, arts organizations, educational institutions, hospitals and other non-profit organizations).

Human Resources Professional

Human resources professionals facilitate the effective use of human resources to achieve organizational goals and objectives. They advise all levels of their organizations regarding people management, develop employee recruitment and retention programs, assist in the selection of job candidates, facilitate employee professional development, and develop and administer other human resource programs.

Property Manager

Property managers oversee the administration, maintenance, operation and improvement of residential, commercial and industrial properties and represent the interests of property owners.

Public Relations Representative

Public relations representatives help organizations achieve their objectives by facilitating

communication links between organizations and the audiences they wish to reach.

Receptionist

Receptionists provide a vital link between customers or clients and an organization's staff and services.

Shipper and Receiver

Shippers and receivers wrap, pack and unpack, store, ship, receive and record the movement of parts, supplies, materials, equipment and stock to and from retailers, wholesalers, manufacturing companies, and other commercial and industrial organizations.

Warehousing Professionals

Warehousing professionals are responsible for general warehousing activities such as shipping and receiving and planning and managing the flow of goods into, within and from organizations.

Word Processing Operator

Word processing operators use computer programs to produce, store and print documents such as letters, reports and tables.

Cleaning and Maintenance Services

Auto Detailer

Auto detailers clean and refurbish the interiors and exteriors of automobiles.

Building Superintendent

Building superintendents maintain and manage commercial, institutional and residential properties.

Carpet and Upholstery Cleaner

Carpet and upholstery cleaners operate cleaning machines to clean carpets, rugs and upholstered furniture at customers' premises or in cleaning plants.

Custodian

Custodians clean building interiors, furnishings and equipment.

Travel Services

Airline Ticket Agent

Airline ticket agents make reservations and sell tickets to passengers travelling by air.

Tour Guide

Tour guides escort individuals or groups of people on tours and describe points of interest.

Travel Consultant

Travel consultants represent travel suppliers. They advertise, promote and sell a wide variety of travel services to the public.

Travel Guide

Travel guides escort individuals or groups of people on holiday tours.

Waste Collection, Recovery and Remediation Services

Ecologist

Ecologists study the relationships of living things to one another and to their environment, and examine the effects of a wide range of factors such as population size, rainfall, temperature, forest fires and major construction projects.

Environmental Engineer

Environmental engineers design systems, processes and equipment for air, water and soil pollution assessment, prevention and control, solid and hazardous waste management, and the remediation of contaminated sites.

Hazardous Waste Management Technologist

Hazardous waste management technologists provide information and advice on the packaging, handling and disposal of toxic wastes; conduct inspections and waste audits; investigate environmental incidents; and monitor and control the clean-up of contaminated land, water and air.

Municipal Recycling Truck Driver

Municipal recycling truck drivers collect, sort and transport recyclable waste materials such as glass, plastic, metal and paper.

Municipal Recycling Waste Handler

Municipal recycling waste handlers sort recyclable domestic and commercial waste materials such as glass, plastic, metal and paper.

Pollution Control Technologist

Pollution control technologists conduct inspections, tests and field investigations to determine the extent of existing air, water or soil contamination and find ways to control and prevent contamination.

Refuse Collector

Refuse collectors pick up non-recyclable waste materials from homes, apartment buildings and businesses along designated routes. They may be employed by municipalities or for private waste management companies.

Refuse Truck Driver

Refuse truck drivers pick up non-recyclable waste materials from homes, apartment buildings and businesses along designated routes, and transport them to landfill sites or incinerators for disposal. They may be employed by municipalities or private waste management companies.

Toxicologist

Toxicologists investigate the possible harmful effects on living things of chemical agents (e.g. drugs, pesticides, food additives), physical agents (e.g. ionizing and electro-magnetic radiation) and biological agents (e.g. plant and animal toxins).

Other Support Services

Landscape Gardener

Landscape gardeners work with other trades to carry out landscaping operations and design in a variety of environments. These environments include residential, commercial and public grounds, playgrounds, golf courses, garden centres, tree nurseries, greenhouses and interior landscapes.

Locksmith

Locksmiths install, adjust and repair locks, make keys and change lock combinations. They work on residential, automotive, commercial and institutional locksets and door hardware. Locksmiths may also install and maintain more sophisticated security systems.

Pest Control Operator

Pest control operators, sometimes called fumigators, exterminators or structural pesticide applicators, use a variety of methods to control and prevent the spread of insects and other pests that may infest private homes, restaurants, warehouses, business establishments and surrounding areas.

Private Investigator

Private investigators gather information and conduct surveillance to secure evidence relating to a wide range of private, corporate and legal interests.

Security Guard

Security guards protect an organization's property, personnel and information against fire, theft, vandalism and illegal entry.

Special Event Co-ordinator

Special event co-ordinators plan, organize and co-ordinate conferences, meetings, seminars, exhibitions, trade shows, festivals and other special events.

Metals, Metal Fabrication and Machinery Manufacturing Industry

A number of occupational profiles describe work in the metal fabrication and machinery manufacturing industry. Following are three lists:

1. profiles about occupations directly involved in making metal products
2. profiles about occupations related to metal fabrication and machinery manufacturing
3. indirectly related profiles about other types of work performed in this industry.

Making Metal Products

Boilermaker

Boilermakers build, erect, repair, test and maintain all types of boilers, tanks and pressure vessels, and perform all types of structural and plate work on dust, air, gas, steam, oil, water and other liquid-tight pressure containers.

Farrier

Farriers trim horses' hooves and, when necessary, forge metal bars into custom-made horseshoes or shape commercial shoes to fit and suit a particular horse.

Machinist

Machinists set up and operate precision metal cutting and grinding machines such as lathes, milling machines, drills and grinders to manufacture and repair products made from metals, plastics, rubber textiles, fibreglass and space age alloys.

Sheet Metal Worker

Sheet metal workers design, fabricate, assemble, install and repair sheet metal products.

Steel Detailer

Steel detailers are specialized drafters who produce detailed shop, fabrication and installation drawings.

Structural Steel and Plate Fitter

Structural steel and plate fitters lay out, prepare and assemble structural steel and steel vessels, containers and miscellaneous components.

Tool and Die Maker

Tool and die makers build and repair the special tools, metal moulds and patterns used in manufacturing.

Welder

Welders join and sever metal components and make metal parts, tools, machines and equipment.

Related Profiles

Automated Systems Technologist

Automated systems technologists analyze, implement, maintain and design electro-mechanical (automated) systems. These systems often include mechanical components, sensors, actuators and control systems and may include stationary or mobile robots.

Drafting Technician

Drafting technicians prepare engineering and architectural drawings, plans, diagrams and layouts. They may work independently as part of multidisciplinary teams or support the work of

technologists, engineers, architects and other professionals.

Engineering Design and Drafting Technologist

Engineering design and drafting technologists develop engineering designs and drawings from preliminary concepts and specifications, and prepare technical reports, construction specifications, cost/materials estimates and contract/tender documents.

Industrial Engineer

Industrial engineers determine the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

Industrial Engineering Technologist

Industrial engineering technologists gather and analyze information about how people, machines and materials are used in organizations to ensure that products and services are delivered in the most cost effective and timely manner possible.

Manufacturing Engineer

Manufacturing engineers design, implement, direct and co-ordinate manufacturing system materials and processes to achieve the most efficient, cost effective and high quality production possible in a safe and environmentally responsible manner.

Materials Engineering Technologist

Materials engineering technologists work in engineering teams that select and test materials for particular industrial and engineering uses and investigate materials-related problems.

Materials/Metallurgical Engineer

Materials engineers are involved in the development, processing, application and evaluation of metals and materials.

Mechanical Engineer

Mechanical engineers research, design and evaluate machines, devices, equipment, systems and processes, and plan and oversee their development, installation, operation and maintenance.

Mechanical Engineering Technologist

Mechanical engineering technologists may work independently or with mechanical engineers in designing, drawing, developing and modifying various types of products, machines, mechanical systems and manufacturing processes.

Millwright

Millwrights install, maintain, repair and troubleshoot stationary industrial machinery and mechanical equipment in factories, production plants and recreational facilities.

Safety Officer

Safety officers facilitate the development, implementation and maintenance of workplace safety programs.

Indirectly Related Profiles

People in the following occupations may be employed in this industry.

Accountant

Accounting Technician

Administrative Assistant

Crane and Hoisting Equipment Operator

Custodian

Heavy Equipment Operator
Human Resources Professional
Occupational Hygienist
Public Relations Representative
Security Guard
Shipper and Receiver

Mineral Products Manufacturing Industry

No occupational profiles describe work that is directly involved in manufacturing mineral products such as paving stones, bricks, ceramic tiles, cement or gypsum products. Following are two lists:

1. profiles related to manufacturing mineral products
2. indirectly related profiles about other types of work performed in this industry.

Related Profiles

Automated Systems Technologist

Automated systems technologists analyze, implement, maintain and design electro-mechanical (automated) systems. These systems often include mechanical components, sensors, actuators and control systems and may include stationary or mobile robots.

Concrete Finisher

Concrete finishers place and finish concrete floors, driveways, sidewalks, curbs, bridge decks and other concrete structures.

Craftsperson

Craftspersons use artistic and manual skills to design and make objects that may be functional, ornamental or communicative.

Glazier

Glaziers cut and install glass and aluminum systems for commercial, residential and automotive applications.

Industrial Engineer

Industrial engineers determine the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

Industrial Engineering Technologist

Industrial engineering technologists gather and analyze information about how people, machines and materials are used in organizations to ensure that products and services are delivered in the most cost effective and timely manner possible.

Instrument Technician

Instrument technicians install, maintain and repair the measuring and control instruments used in industrial and commercial processing.

Manufacturing Engineer

Manufacturing engineers design, implement, direct and co-ordinate manufacturing system materials and processes to achieve the most efficient, cost effective and high quality production possible in a safe and environmentally responsible manner.

Materials Engineering Technologist

Materials engineering technologists work in engineering teams that select and test materials for particular industrial and engineering uses and investigate materials-related problems.

Materials/Metallurgical Engineer

Materials engineers are involved in the development, processing, application and evaluation of metals and materials.

Millwright

Millwrights install, maintain, repair and troubleshoot stationary industrial machinery and

mechanical equipment in factories, production plants and recreational facilities.

Operations Manager

Operations managers direct and co-ordinate the operation of manufacturing, service delivery and production departments in industrial, commercial and government organizations.

Operations Research Analyst

Operations research analysts use mathematical modelling and information technology to develop decision support systems for decision-makers in public and private organizations.

Safety Officer

Safety officers facilitate the development, implementation and maintenance of workplace safety programs.

Warehousing Professionals

Warehousing professionals are responsible for general warehousing activities such as shipping and receiving and planning and managing the flow of goods into, within and from organizations.

Indirectly Related Profiles

People in the following occupations may be employed by mineral products manufacturers.

Accountant

Accounting Technician

Administrative Assistant

Crane and Hoisting Equipment Operator

Custodian

Heavy Equipment Operator

Security Guard

Shipper and Receiver

Truck Driver

Mining Industry

Many occupational profiles describe work in underground mining, surface mining, and associated operations such as mills and preparation plants. Following are three lists:

1. profiles about occupations involved in mining metallic minerals (ores) and non-metallic minerals (except coal), drilling for minerals (other than oil and gas), or providing mining services on a contract or fee basis
2. profiles about other occupations related to mining
3. indirectly related profiles about other types of work required in mining companies and related services.

Mining Operations

Blaster

Blasters break up rock and demolish structures by placing and detonating explosives.

Exploration Geophysicist

Geophysicists use the principles of physics, mathematics and geology to study the surface and internal composition of the earth. Exploration geophysicists look for oil, natural gas, water and minerals for economic exploitation and for environmental projects.

Geological and Geophysical Technologist

Geological and geophysical technologists may work independently or with a team of geologists, geophysicists, mining engineers or petroleum engineers.

Geologist

Geologists study the nature and history of the Earth's crust and apply their knowledge in exploring for minerals and hydrocarbons (e.g. oil and gas), developing resources for production, building engineering foundations and stable slopes, finding and evaluating ground water supplies and conducting environmental investigations.

Hydrometric Technician/Technologist

Hydrometric technicians and technologists may work independently or provide technical support for hydrologists and related scientists and engineers.

Meteorologist

Meteorologists study the physics, chemistry and dynamics of the atmosphere and its interaction with land and water surfaces, weather, climate, climate change and their effect on people's health and safety, the economy and the earth's ecosystems.

Mining Engineer

Mining engineers develop and apply methods of locating, extracting and preparing minerals to be used in manufacturing and energy industries.

Seismic Observer

Seismic observers operate geophysical recording instruments used in seismic field tests and perform routine maintenance to ensure optimum data quality.

Seismic Worker

Seismic workers conduct seismic tests in which controlled explosions or vibrations create sound waves in the earth's surface and geophysical instruments record seismic data.

Surface Mining Equipment Operator

Surface mining equipment operators use heavy equipment to recover minerals from near the earth's surface (open pit or strip mining).

Underground Miner

Underground mining equipment operators use different types and sizes of equipment to extract minerals from beneath the earth's surface and construct mine tunnels, passageways and shafts.

Other Profiles Related to Mining

Geomatics/Surveying Engineer

Geomatics/surveying engineers gather, model, analyze and manage spatially-referenced data (information identified according to location).

Geomatics/Surveying Technologist

Geomatics technologists conduct or participate in field surveys, office calculations and plan production to determine the exact locations and relative positions of natural features and man-made structures on the earth's surface, underground or underwater.

Heavy Equipment Operator

Heavy equipment operators use a variety of mobile machines and attachments to excavate, grade and landscape earth or move workers, materials and equipment.

Hydrologist

Hydrologists study the distribution and circulation of water in the atmosphere, on the earth's surface and in soil and underlying rocks.

Industrial Engineer

Industrial engineers determine the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

Industrial Engineering Technologist

Industrial engineering technologists gather and analyze information about how people, machines and materials are used in organizations to ensure that products and services are delivered in the most cost effective and timely manner possible.

Land Surveyor

Land surveyors plan, direct and conduct legal surveys to determine and interpret the location of boundaries, contours and other natural or human-made features.

Materials/Metallurgical Engineer

Materials engineers are involved in the development, processing, application and evaluation of metals and materials.

Safety Officer

Safety officers, often called safety co-ordinators, advisers, directors or managers, facilitate the development, implementation and maintenance of workplace safety programs.

Truck Driver

Truck drivers operate gasoline or diesel-powered trucks, tractor-trailers and similar vehicles to transport goods and materials over local routes or long distances.

Indirectly Related Profiles

People in the following occupations may work for mining companies.

Accountant

Accounting Technician

Administrative Assistant

Bus Driver

Chef
Computer and Network Operator
Concrete Finisher

Oil and Gas Extraction Industry

A number of occupational profiles describe work involved in operating oil and gas field properties or providing related services. Following are three lists:

1. profiles about oil and gas field operations and services
2. profiles about oil and gas processing and related activities
3. indirectly related profiles about other types of work required in the oil and gas extraction industry.

Field Operations and Services

Commercial Diver

Commercial divers work in underwater construction and salvage operations inland (in rivers, lakes, canals and open roadsteads) or offshore (in harbours and oceans). They may participate in search and recovery operations or marine research, or do inspection, maintenance and repair work related to offshore oil and gas production.

Drilling and Service Rig Managers

Oil and gas well drilling and service rig managers supervise large crews of specialized workers on drilling and service rigs.

Drilling Rig Leasehand/Floorhand

Leasehands and floorhands perform general labourer duties on rigs that drill oil and gas wells and case wells with pipe.

Exploration Geophysicist

Geophysicists use the principles of physics, mathematics and geology to study the surface and internal composition of the earth. Exploration geophysicists look for oil, natural gas, water and minerals for economic exploitation and for environmental projects.

Field Production Operator

Field production operators are responsible for the initial separation processes or the special treatment required to ensure that impurities such as water, gas and sediments are removed from oil and gas in the field. Once separated, the oil or gas is transported by pipeline to refineries, gas plants or markets.

Geological and Geophysical Technologist

Geological and geophysical technologists may work independently or with a team of geologists, geophysicists, mining engineers or petroleum engineers.

Geologist

Geologists study the nature and history of the Earth's crust and apply their knowledge in exploring for minerals and hydrocarbons (e.g. oil and gas), developing resources for production, building engineering foundations and stable slopes, finding and evaluating ground water supplies and conducting environmental investigations.

Land Agent

Land agents negotiate and acquire interests in land for rights of way for well sites, pipelines, powerlines, roads and other surface uses.

Oil and Gas Well Loggers and Testers

Oil and gas well loggers and testers operate specialized tools, instruments and equipment to provide services related to oil and gas well drilling, completion and servicing.

Petroleum Engineer

Petroleum engineers are involved in the exploration and development of oil and gas fields. They apply the principles of geology, physics, chemistry and the engineering sciences to the recovery, development and processing of petroleum.

Petroleum Engineering Technologist

Petroleum engineering technologists are responsible for many of the technical activities involved in the production of oil and gas from conventional reserves, as well as from heavy oil and oil sands. Their knowledge and training is applied to petroleum drilling, geology, production procedures, formation evaluation and reservoir engineering.

Rig Technician

Rig technicians operate oil and gas drilling rigs. This newly defined trade has three journeyman certification levels commonly known as motorhand (level 1), derrickhand (level 2) and driller (level 3).

Seismic Observer

Seismic observers operate geophysical recording instruments used in seismic field tests and perform routine maintenance to ensure optimum data quality.

Seismic Worker

Seismic workers conduct seismic tests in which controlled explosions or vibrations create sound waves in the earth's surface and geophysical instruments record seismic data.

Service Rig Personnel

Oil and gas well service rig personnel perform general labourer duties on service rigs and operate specialized equipment to service, complete and abandon wells.

Surface Mining Equipment Operator

Surface mining equipment operators use heavy equipment to recover minerals from near the earth's surface (open pit or strip mining).

Well Service Equipment Operator

Well service equipment crews are called in at different times during the development of oil and gas wells for specialized oil field service operations such as cementing, acidizing, fracturing or nitrogen injection.

Wireline Field Supervisor

Wireline field supervisors direct the work of wireline operators and collect and process data from wireline operations.

Processing and Other Related Activities

Chemical Engineer

Chemical engineers develop processes, design equipment and provide technical and management services for plants that convert raw materials into a wide range of end products (e.g. chemicals, pharmaceuticals, food products, fuels, plastics, metals).

Chemical Engineering Technologist

Chemical engineering technologists are involved in process design, plant engineering, environmental control, engineering sales and plant operations. They may work independently or in an engineering team.

Chemical Technologist

Chemical technologists may work independently or with a team of chemists, chemical engineers and related professionals involved in quality control testing, product research and development, or environmental analysis.

Chemist

Chemists conduct research and develop new or improved products and processes, and test and evaluate their quality and safety.

Civil Engineer

Civil engineers plan, design and supervise the construction, maintenance and decommissioning of a wide variety of public and private structures and facilities.

Civil Engineering Technologist

Civil engineering technologists work with engineers, architects, surveyors and contractors in designing, developing and building civil engineering projects that are economical and functional and satisfy applicable standards and building codes.

Financial Analyst

Financial analysts collect, evaluate and apply financial, economic and statistical data to analyze and evaluate investment opportunities, or make financial decisions and recommendations.

Gas Pipeline Operators and Maintenance Workers

Gas pipeline operators and maintenance workers monitor the day to day operations of meter and compressor stations essential to the distribution and smooth flow of gas through pipelines.

Gas Plant Operator

Gas plant operators control automated processes which convert raw natural gas into forms that can be used by consumers.

Gas Utility Operator

Gas utility operators install and service gas utility pipeline systems that transport natural gas from its source to points of use such as building meter sets.

Geomatics/Surveying Engineer

Geomatics/surveying engineers gather, model, analyze and manage spatially-referenced data (information identified according to location).

Geomatics/Surveying Technologist

Geomatics technologists conduct or participate in field surveys, office calculations and plan production to determine the exact locations and relative positions of natural features and man-made structures on the earth's surface, underground or underwater.

Hazardous Waste Management Technologist

Hazardous waste management technologists provide information and advice on the packaging, handling and disposal of toxic wastes; conduct inspections and waste audits; investigate environmental incidents; and monitor and control the clean-up of contaminated land, water and air.

Hydrologist

Hydrologists study the distribution and circulation of water in the atmosphere, on the earth's surface and in soil and underlying rocks.

Hydrometric Technician/Technologist

Hydrometric technicians and technologists may work independently or provide technical support for hydrologists and related scientists and engineers.

Industrial Engineer

Industrial engineers are responsible for determining the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

Industrial Engineering Technologist

Industrial engineering technologists gather and analyze information about how people, machines and materials are used in organizations to ensure that products and services are delivered in the most cost effective and timely manner possible.

Instrument Technician

Instrument technicians install, maintain and repair the measuring and control instruments used in industrial and commercial processing.

Land Surveyor

Land surveyors plan, direct and conduct legal surveys to determine and interpret the location of boundaries, contours and other natural or human-made features.

Manufacturing Engineer

Manufacturing engineers design, implement, direct and co-ordinate manufacturing system materials and processes to achieve the most efficient, cost effective and high quality production possible in a safe and environmentally responsible manner.

Materials Engineering Technologist

Materials engineering technologists work in engineering teams that select and test materials for particular industrial and engineering uses and investigate materials-related problems.

Materials/Metallurgical Engineer

Materials engineers are involved in the development, processing, application and evaluation of metals and materials.

Mining Engineer

Mining engineers develop and apply methods of locating, extracting and preparing minerals to be used in manufacturing and energy industries.

Occupational Health and Safety Inspector

Occupational health and safety inspectors visit places of employment to detect unsafe or unhealthy working conditions, and ensure compliance with laws and regulations governing workplace safety.

Oil Pipeline Operators and Maintenance Workers

Oil pipeline operators and maintenance workers monitor and conduct the day to day operations of oil pipelines and associated facilities.

Power Engineer

Power engineers supervise, operate and maintain machinery and boilers that provide power, heat, refrigeration and other utility services to heavy industry and large building complexes.

Refinery/Upgrader Process Operator

Refinery/upgrader process operators are responsible for the day to day operations of oil refineries and upgraders.

Safety Officer

Safety officers, often called safety co-ordinators, advisers, directors or managers, facilitate the development, implementation and maintenance of workplace safety programs.

Other Manufacturing Industry

Many occupational profiles describe work in organizations that manufacture products from raw materials. Following are five lists:

1. profiles about occupations involved in manufacturing wood and paper products
2. profiles about occupations involved in manufacturing electrical and electronic products
3. profiles about occupations involved in manufacturing miscellaneous products not included in other industry clusters (Food and Beverage Products Manufacturing, Manufactured Mineral Products, Metal Fabrication and Machinery, and Rubber, Plastics and Chemicals)
4. profiles about other occupations directly related to manufacturing
5. indirectly related profiles about other types of work performed in manufacturing establishments.

Wood and Paper Products

Binding and Finishing Machine Operators

Binding and finishing machine operators set up and operate machines and equipment that turn large sheets of paper from the printing press into finished print materials such as books, brochures and presentation folders.

Cabinetmaker

Cabinetmakers build and repair custom or production-type fixtures and furniture made of wood or wood substitutes.

Digital Printing Machine Operator

Digital printing machine operators use laser printers, computerized high speed colour copiers and other printing machines to print text, illustrations and designs on paper.

Pre-Press Technician

Pre-press technicians use computer software and computer-controlled machines and equipment to generate and combine text, graphics and other visual elements to prepare copy for printing.

Printing Press Operator

Printing press operators set up and operate sheet and web-fed presses that print single or multiple colours on paper.

Pulpmill Operator

Pulpmill operators operate and monitor processing machinery and equipment to produce pulp for use in the production of paper.

Sawfiler

Sawfilers repair, set and sharpen blades for band, chain, hand, circular and other types of saws.

Sawmill Machine Operator

Sawmill machine operators operate, monitor and control automated machines and equipment that process logs into lumber, shingles and shakes.

Upholsterer

Upholsterers cover furniture such as sofas and chairs with fabric, leather and other upholstery materials.

Electrical and Electronic Products

Computer Engineer

Computer engineers design, implement, evaluate, modify, maintain and test computer systems and related equipment.

Electrical Engineer

Electrical engineers design, construct, analyze and test electrical and electronic components and systems, and are responsible for their safe operation.

Electrical Engineering Technologist

Electrical engineering technologists apply their knowledge and understanding of electrical theory in business, engineering and industry settings.

Electronics Assemblers and Fabricators

Electronics assemblers and fabricators mount, secure, interconnect and adjust parts and components to assemble and fabricate electronic equipment.

Electronics Engineering Technologist

Electronics engineering technologists apply the practical and theoretical principles of electronics to the development of electronic-based circuits, and the operation and servicing of electronic equipment and systems.

Miscellaneous Products

Aircraft Maintenance Engineer

Aircraft maintenance engineers are licensed by Transport Canada to inspect and certify that work done on an aircraft complies with written airworthiness standards. They may specialize in different types of aircraft such as turbo jets, helicopters or propeller-driven airplanes.

Avionics Technologist

Avionics technologists modify, install, maintain and repair electronic equipment used in aviation.

Denturist

Denturists are dental health professionals who specialize in the field of removable oral prosthesis (dentures). In partnership with other health care professionals, they assess, design, fabricate, repair and insert complete and removable partial dentures and diagnose related problems.

Jeweller

Jewellers design, make, repair and appraise fine, fashion and costume jewellery.

Musical Instrument Repair Technician

Musical instrument repair technicians, including piano technicians, pipe organ repairers, band instrument repair technicians and violin repairers, maintain and repair musical instruments.

Optical Technician

Optical technicians manufacture, assemble and repair eyeglasses according to prescriptions from optometrists or ophthalmologists.

Prosthetic/Orthotic Technician

Prosthetic/orthotic technicians work with prosthetists and orthotists in the production, fabrication and repair of prostheses (artificial limbs) and orthoses (braces and supports) that are used to support weakened body parts, correct body defects or replace amputated limbs.

Prosthetist and Orthotist

Prosthetists and orthotists work from physicians' prescriptions to design, fabricate, fit and repair prosthetic devices (artificial limbs) and orthotic devices (braces and supports) which are used to support weakened body parts, correct body defects or replace lost limbs.

Watch Repairer

Watch repairers clean, oil, adjust and repair all types of mechanical and electronic clocks and watches.

Other Profiles Related to Manufacturing

Automated Systems Technologist

Automated systems technologists analyze, implement, maintain and design electro-mechanical (automated) systems. These systems often include mechanical components, sensors, actuators and control systems and may include stationary or mobile robots.

Chemical Technologist

Chemical technologists may work independently or with a team of chemists, chemical engineers and related professionals involved in quality control testing, product research and development, or environmental analysis.

Customs Broker

Customs brokers are employed by importers and exporters to clear goods through customs and ensure their timely delivery. They may also be involved in logistics or supply chain management.

Drafting Technician

Drafting technicians prepare engineering and architectural drawings, plans, diagrams and layouts. They may work independently as part of multidisciplinary teams or support the work of technologists, engineers, architects and other professionals.

Engineering Design and Drafting Technologist

Engineering design and drafting technologists develop engineering designs and drawings from preliminary concepts and specifications, and prepare technical reports, construction specifications, cost/materials estimates and contract/tender documents.

Hazardous Waste Management Technologist

Hazardous waste management technologists provide information and advice on the packaging, handling and disposal of toxic wastes; conduct inspections and waste audits; investigate environmental incidents; and monitor and control the clean-up of contaminated land, water and air.

Industrial Designer

Industrial designers conceptualize and produce designs for a wide variety of products and systems (e.g. furniture, electronics, appliances, tools, automobiles, sporting goods, architectural details, signage).

Industrial Engineer

Industrial engineers determine the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

Industrial Engineering Technologist

Industrial engineering technologists gather and analyze information about how people, machines and materials are used in organizations to ensure that products and services are delivered in the most cost effective and timely manner possible.

Instrument Technician

Instrument technicians install, maintain and repair the measuring and control instruments used in industrial and commercial processing.

Manufacturing Engineer

Manufacturing engineers design, implement, direct and co-ordinate manufacturing system materials and processes to achieve the most efficient, cost effective and high quality production possible in a safe and environmentally responsible manner.

Materials Engineering Technologist

Materials engineering technologists work in engineering teams that select and test materials for particular industrial and engineering uses and investigate materials-related problems.

Materials/Metallurgical Engineer

Materials engineers are involved in the development, processing, application and evaluation of metals and materials.

Mechanical Engineer

Mechanical engineers research, design and evaluate machines, devices, equipment, systems and processes, and plan and oversee their development, installation, operation and maintenance.

Mechanical Engineering Technologist

Mechanical engineering technologists may work independently or with mechanical engineers in designing, drawing, developing and modifying various types of products, machines, mechanical systems and manufacturing processes.

Millwright

Millwrights install, maintain, repair and troubleshoot stationary industrial machinery and mechanical equipment in factories, production plants and recreational facilities.

Operations Manager

Operations managers direct and co-ordinate the operation of manufacturing, service delivery and production departments in industrial, commercial and government organizations.

Operations Research Analyst

Operations research analysts use mathematical modelling and information technology to develop decision support systems for decision-makers in public and private organizations.

Pollution Control Technologist

Pollution control technologists conduct inspections, tests and field investigations to determine the extent of existing air, water or soil contamination and find ways to control and prevent contamination.

Power Engineer

Power engineers supervise, operate and maintain machinery and boilers that provide power, heat, refrigeration and other utility services to heavy industry and large building complexes.

Safety Officer

Safety officers, often called safety co-ordinators, advisers, directors or managers, facilitate the development, implementation and maintenance of workplace safety programs.

Sales Representative (Wholesale, Nontechnical)

Wholesale, nontechnical sales representatives sell their organizations' nontechnical goods and services to retail, commercial, industrial and professional clients.

Technical Sales Representative

Technical sales representatives sell technical goods and services to government, commercial and industrial establishments. They may sell commodities such as computers, software and business machines or services such as technical analysis and consulting services.

Technical Writer

Technical writers translate complex technical information into simpler language. They shape and deliver information to meet the needs of a target audience.

Traffic Manager

Traffic managers direct and co-ordinate the transportation of incoming materials from suppliers or raw material sources and outgoing products to distribution houses and customers.

Warehousing Professionals

Warehousing professionals are responsible for general warehousing activities such as shipping and receiving and planning and managing the flow of goods into, within and from organizations.

Petrochemicals, Rubber, Plastics and Chemicals Manufacturing Industry

Many occupational profiles describe work involved in transforming raw materials into rubber products, plastics and chemicals (intermediate or end products). Following are three lists:

1. profiles about occupations directly involved in rubber, plastics and chemicals manufacturing
2. profiles about occupations related to rubber, plastics and chemicals production
3. indirectly related profiles about other types of work performed in this industry.

Manufacturing

Biochemist

Biochemists study the chemical make-up of living matter and the molecular basis for processes that occur in cells. They develop medical, agricultural, food science, pharmacological, industrial, environmental and other practical applications.

Chemical Engineer

Chemical engineers develop processes, design equipment and provide technical and management services for plants that convert raw materials into a wide range of end products (e.g. chemicals, pharmaceuticals, food products, fuels, plastics, metals).

Chemical Engineering Technologist

Chemical engineering technologists are involved in process design, plant engineering, environmental control, engineering sales and plant operations. They may work independently or in an engineering team.

Chemical Technologist

Chemical technologists may work independently or with a team of chemists, chemical engineers and related professionals involved in quality control testing, product research and development, or environmental analysis.

Chemist

Chemists conduct research and develop new or improved products and processes, and test and evaluate their quality and safety.

Customs Broker

Customs brokers are employed by importers and exporters to clear goods through customs and ensure their timely delivery. They may also be involved in logistics or supply chain management.

Gas Plant Operator

Gas plant operators control automated processes which convert raw natural gas into forms that can be used by consumers.

Industrial Engineer

Industrial engineers are responsible for determining the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

Industrial Engineering Technologist

Industrial engineering technologists gather and analyze information about how people, machines and materials are used in organizations to ensure that products and services are delivered in the most cost effective and timely manner possible.

Instrument Technician

Instrument technicians install, maintain and repair the measuring and control instruments used in

industrial and commercial processing.

Manufacturing Engineer

Manufacturing engineers design, implement, direct and co-ordinate manufacturing system materials and processes to achieve the most efficient, cost effective and high quality production possible in a safe and environmentally responsible manner.

Materials Engineering Technologist

Materials engineering technologists work in engineering teams that select and test materials for particular industrial and engineering uses and investigate materials-related problems.

Materials/Metallurgical Engineer

Materials engineers are involved in the development, processing, application and evaluation of metals and materials.

Plastics Processing Technician

Plastics processing technicians set up, monitor, troubleshoot and optimize plastics processing equipment (including injection moulding and extrusion equipment).

Pollution Control Technologist

Pollution control technologists conduct inspections, tests and field investigations to determine the extent of existing air, water or soil contamination and find ways to control and prevent contamination.

Power Engineer

Power engineers supervise, operate and maintain machinery and boilers that provide power, heat, refrigeration and other utility services to heavy industry and large building complexes.

Refinery/Upgrader Process Operator

Refinery/upgrader process operators are responsible for the day to day operations of oil refineries and upgraders.

Safety Officer

Safety officers, often called safety co-ordinators, advisers, directors or managers, facilitate the development, implementation and maintenance of workplace safety programs.

Profiles of Related Occupations

Biologist

Biologists conduct research to learn more about living organisms and ecosystems, manage natural resources, and develop new practices and products in such diverse fields as environmental conservation, forensics and pest control.

College, Technical or Vocational Instructor

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

Drilling Rig Leasehand/Floorhand

Leasehands and floorhands perform general labourer duties on rigs that drill oil and gas wells and case wells with pipe.

Field Production Operator

Field production operators are responsible for the initial separation processes or the special treatment required to ensure that impurities such as water, gas and sediments are removed from oil and gas in the field. Once separated, the oil or gas is transported by pipeline to refineries, gas plants

or markets.

Gas Pipeline Operators and Maintenance Workers

Gas pipeline operators and maintenance workers monitor the day to day operations of meter and compressor stations essential to the distribution and smooth flow of gas through pipelines.

Gas Utility Operator

Gas utility operators install and service gas utility pipeline systems that transport natural gas from its source to points of use such as building meter sets.

Hazardous Waste Management Technologist

Hazardous waste management technologists provide information and advice on the packaging, handling and disposal of toxic wastes; conduct inspections and waste audits; investigate environmental incidents; and monitor and control the clean-up of contaminated land, water and air.

Hydrologist

Hydrologists study the distribution and circulation of water in the atmosphere, on the earth's surface and in soil and underlying rocks.

Hydrometric Technician/Technologist

Hydrometric technicians and technologists may work independently or provide technical support for hydrologists and related scientists and engineers.

Millwright

Millwrights install, maintain, repair and troubleshoot stationary industrial machinery and mechanical equipment in factories, production plants and recreational facilities.

Oil Pipeline Operators and Maintenance Workers

Oil pipeline operators and maintenance workers monitor and conduct the day to day operations of oil pipelines and associated facilities.

Petroleum Engineer

Petroleum engineers are involved in the exploration and development of oil and gas fields. They apply the principles of geology, physics, chemistry and the engineering sciences to the recovery, development and processing of petroleum.

Petroleum Engineering Technologist

Petroleum engineering technologists are responsible for many of the technical activities involved in the production of oil and gas from conventional reserves, as well as from heavy oil and oil sands. Their knowledge and training is applied to petroleum drilling, geology, production procedures, formation evaluation and reservoir engineering.

Power System Electrician

Power system electricians install, maintain and repair electrical power generation, transmission and distribution systems and equipment.

University Professor

University professors are employed by degree-granting institutions to teach and produce works of art or conduct research and publish their research findings.

Professional and Technical Services Industry

A great many occupational profiles describe occupations in which people are often self-employed or work for firms that provide professional or technical services on a fee-for-service or project basis. The following lists include profiles about:

1. accounting services
2. architectural, engineering and surveying services
3. artistic services
4. legal and protective services
5. management, scientific and technical services
6. other professional and technical services.

The **Related Profiles** list includes occupations in which many, but not most, people work on a fee-for-service or project basis.

Accounting Services

Accountant

Accountants provide financial reporting and consulting services for organizations and individuals.

Accounting Technician

Accounting technicians maintain systematic records of business transactions and verify and record those transactions. They use computers to calculate, prepare and process invoices, accounts payable and receivable, budget documents and other routine financial records.

Internal Auditor

Internal auditors conduct financial, systems and operational audits in their organizations. (External auditors are usually accountants who are not part of the organization being audited.)

Architectural, Engineering and Surveying Services

Agricultural Engineer

Agricultural engineers integrate engineering science and design with applied biological science to solve problems in agriculture, food and other resource industries.

Architect

Architects design building projects and advise clients regarding building projects. They prepare programs, sketches and cost estimates, produce scale construction drawings, write specifications and review on-site construction work.

Architectural Technologist

Architectural technologists work with architects, engineers and others in designing and developing plans and working drawings, estimating costs and supervising building construction projects.

Automated Systems Technologist

Automated systems technologists analyze, implement, maintain and design electro-mechanical (automated) systems. These systems often include mechanical components, sensors, actuators and control systems and may include stationary or mobile robots.

Civil Engineer

Civil engineers plan, design and supervise the construction, maintenance and decommissioning of a wide variety of public and private structures and facilities.

Civil Engineering Technologist

Civil engineering technologists work with engineers, architects, surveyors and contractors in designing, developing and building civil engineering projects that are economical and functional and

satisfy applicable standards and building codes.

Computer Engineer

Computer engineers design, implement, evaluate, modify, maintain and test computer systems and related equipment.

Drafting Technician

Drafting technicians prepare engineering and architectural drawings, plans, diagrams and layouts. They may work independently as part of multidisciplinary teams or support the work of technologists, engineers, architects and other professionals.

Electrical Contractor

Electrical contractors erect or install electrical installations or equipment. They may also repair, service or maintain electrical installations or equipment.

Electrical Engineer

Electrical engineers design, construct, analyze and test electrical and electronic components and systems, and are responsible for their safe operation.

Electrical Engineering Technologist

Electrical engineering technologists apply their knowledge and understanding of electrical theory in business and industry settings.

Electronic Technician

Electronic technicians service and repair household and business electronic equipment such as radios and televisions, compact disc players and personal computer systems.

Electronics Engineering Technologist

Electronics engineering technologists apply the practical and theoretical principles of electronics to the development of electronic-based circuits, and the operation and servicing of electronic equipment and systems.

Engineering Design and Drafting Technologist

Engineering design and drafting technologists develop engineering designs and drawings from preliminary concepts and specifications, and prepare technical reports, construction specifications, cost/materials estimates and contract/tender documents.

Environmental Engineer

Environmental engineers design systems, processes and equipment for air, water and soil pollution assessment, prevention and control, solid and hazardous waste management, and the remediation of contaminated sites.

Geomatics/Surveying Engineer

Geomatics/surveying engineers gather, model, analyze and manage spatially-referenced data (information identified according to location).

Geomatics/Surveying Technologist

Geomatics technologists conduct or participate in field surveys, office calculations and plan production to determine the exact locations and relative positions of natural features and man-made structures on the earth's surface, underground or underwater.

Industrial Designer

Industrial designers conceptualize and produce designs for a wide variety of products and systems (e.g. furniture, electronics, appliances, tools, automobiles, sporting goods, architectural details, signage).

Industrial Engineer

Industrial engineers are responsible for determining the most effective ways for an organization to use its basic resources: people, machines, materials, money and time.

Instrumentation Engineering Technologist

Instrumentation engineering technologists apply their knowledge of pneumatic, electronic and microcomputer measurement and control systems in business, engineering and industry settings.

Interior Designer

Interior designers create and enhance interior spaces to improve quality of life, increase productivity and protect public health, safety and welfare.

Land Surveyor

Land surveyors plan, direct and conduct legal surveys to determine and interpret the location of boundaries, contours and other natural or human-made features.

Landscape Architect

Landscape architects combine artistic and creative perspectives with scientific and engineering knowledge to create, manage and conserve environments that are both functional and attractive. Their goal is to create harmony between natural environments, land features and architectural structures.

Manufacturing Engineer

Manufacturing engineers design, implement, direct and co-ordinate manufacturing system materials and processes to achieve the most efficient, cost effective and high quality production possible in a safe and environmentally responsible manner.

Materials/Metallurgical Engineer

Materials engineers are involved in the development, processing, application and evaluation of metals and materials.

Mechanical Engineer

Mechanical engineers research, design and evaluate machines, devices, equipment, systems and processes, and plan and oversee their development, installation, operation and maintenance.

Software Engineer

Software engineers research, design, evaluate, modify, integrate, test and maintain software applications, technical environments, operating systems, embedded software, information warehouses and telecommunications software.

Artistic Services

Animator

Animators create the illusion of movement by manipulating sequences of still images. They may use a variety of materials and techniques including computer software, drawings on paper and three-dimensional sculptures.

Cartoonist

Cartoonists are artists who create cartoon-style illustrations for newspapers, advertisements, magazines, films, television, books, newsletters and greeting cards.

Composer

Composers create and write a wide variety of original music (e.g. symphonies, operas, ballet scores, musical theatre scores, jazz or rock pieces). They also write music for commercial mediums, including advertising jingles and film soundtracks.

Costume Designer

Costume designers plan and create costumes and clothing accessories for theatre, dance, opera, television, video and film productions.

Film Director

Film directors develop an artistic vision for a film production and work with others to implement that vision.

Graphic Designer

Graphic designers translate ideas and information into visual "concepts" designed to inform or persuade. For example, they may design or illustrate brochures, packaging, promotional materials, corporate logos, annual reports or websites.

Illustrator

Illustrators research and create drawings and pictures to visually portray their own or other people's ideas. They may create illustrations for items such as commercial packaging, games, magazines, storybooks, medical textbooks, annual reports, brochures or advertisements.

Lighting Designer

Lighting designers design and plan lighting effects for theatre, dance, opera, television, video and film productions.

Music Copyist

Music copyists prepare individual parts (instrumental and vocal) from musical scores. They may copy all of the music on manuscript paper exactly as written by the composer or arranger, or input the correct information into a music copying computer program.

Orchestra/Band Conductor

Orchestra and band conductors produce their own interpretations of musical works by directing performers in musical groups such as chamber orchestras, wind ensembles, concert bands, symphony orchestras, jazz bands and orchestras for ballet and opera performances.

Orchestrator/Arranger

Orchestrators transcribe musical compositions into scores and assign specific passages to particular instruments to add desired variations of sound. **Arrangers** rewrite original musical scores in different musical styles by changing the rhythm, harmony or tempo.

Producer - Film, Radio, Television and Theatre

Producers co-ordinate the making of films, theatre productions, television and radio programs including everything from the initial concept to final production and distribution.

Set Designer

Set designers design and plan the creation of settings, scenic environments and properties (props) for theatre, dance, opera, television, video and film productions.

Songwriter

Songwriters may compose both the melody and the lyrics (words) to a song or write only the words.

Theatre Director

Theatre directors make artistic decisions about stage productions and consult with producers about everything from selecting the story or idea, the cast and sometimes the crew to overseeing rehearsals.

Legal and Protective Services

Lawyer

Lawyers study and interpret points of law to advise clients of their rights and legal obligations, and

represent client interests in legal transactions and proceedings.

Legal and Realtime Reporter

Legal and realtime reporters write machine shorthand at a minimum speed of 225 words per minute to capture every word spoken in a variety of settings. Computer technology instantly translates shorthand notes into English text that can be displayed or printed.

Legal Secretary

Legal secretaries perform a variety of secretarial and administrative duties in law offices, the legal departments of large organizations, courts, real estate companies and land title offices.

Paralegal

Paralegals do independent legal work under the general supervision of lawyers. They perform routine legal and administrative functions and assist lawyers with more complex matters.

Private Investigator

Private investigators gather information and conduct surveillance to secure evidence relating to a wide range of private, corporate and legal interests.

Security Alarm Installer

Security alarm installers install and maintain electronic security alarm systems for homes, businesses and industrial properties.

Security Guard

Security guards protect an organization's property, personnel and information against fire, theft, vandalism and illegal entry.

Management and Technical Services

Administrative Assistant

Administrative assistants perform administrative duties ranging from general office tasks to acting as special assistants in particular departments.

Computer and Network Operator

Computer and network operators establish, operate, maintain and support the use of local area networks (LANs), wide area networks (WANs), mainframe networks and related hardware, software and peripheral equipment.

Computer Programmer

Computer programmers create, modify and test the forms, scripts and code that tell computers what to do.

Computer Service Technician

Computer service technicians install, service and configure computer systems and networks including desktop computers, servers and peripherals such as printers, disk drives and CD-ROM drives.

Customer Support Analyst

Customer support analysts answer computer-related questions, investigate complaints and work with others in a team environment to resolve users' software and hardware problems.

Customs Broker

Customs brokers are employed by importers and exporters to clear goods through customs and ensure their timely delivery. They may also be involved in logistics or supply chain management.

Demographer

Demographers plan and conduct research to study characteristics of human populations such as size,

growth, composition, mobility and distribution.

Ergonomist

Ergonomists study the relationships among people, equipment, and working or living environments, and apply their knowledge to enhance performance, comfort and safety.

Information Systems Consultant

Information systems consultants analyze, design and develop information systems business solutions and provide advice on a wide range of information systems issues.

Investment Underwriter

Investment underwriters help governments and corporations raise capital by providing financial advice and underwriting or distributing new securities.

Management Consultant

Management consultants are contracted by organizations to provide independent and objective advisory services in areas such as strategic planning, facilitation, quality assurance, education and training, investment, information technology, identification and analysis of management problems, solution development or strategy implementation.

Market Research Analyst

Market research analysts use data gathered about marketplace participants (customers, employers and competitors) and their responses to products and services. This information is used to improve market success.

Mathematician

Mathematicians use logical reasoning to study structure. They do fundamental research and develop techniques and insights that can be applied in a variety of fields, including physics, engineering, finance and organizational structure and decision making.

Operations Research Analyst

Operations research analysts use mathematical modelling and information technology to develop decision support systems for decision-makers in public and private organizations.

Statistician

Statisticians plan, organize, analyze and interpret studies to provide usable information for a wide range of activities. For example, they may be involved in agricultural or health research, evaluating government programs, assessing environmental problems, improving manufacturing or business processes, or forecasting future economic conditions.

Web Designer

Web designers create websites for the Internet and sites internal to their organizations.

Word Processing Operator

Word processing operators use computer programs to produce, store and print documents such as letters, reports and tables.

Other Professional and Technical Services

Advertising Account Executive

Advertising account executives co-ordinate the day to day activities involved in planning and implementing print and electronic media advertising campaigns.

Collection Agent

Collection agents use various strategies to collect money owed on past due accounts including letter writing, telephone calls and credit management.

Financial Planner

Financial planners develop personal financial plans for individuals and families. They analyze clients' net worth, financial resources, lifestyle preferences and goals, and make recommendations regarding how clients can achieve their financial goals.

Fundraiser

Fund-raisers, sometimes called development officers, plan and organize annual fund-raising programs, special gift appeals and campaigns to raise money for particular groups or causes (e.g. community agencies, arts organizations, educational institutions, hospitals and other non-profit organizations).

Human Resources Professional

Human resources professionals facilitate the effective use of human resources to achieve organizational goals and objectives. They advise all levels of their organizations regarding people management, develop employee recruitment and retention programs, assist in the selection of job candidates, facilitate employee professional development, and develop and administer other human resource programs.

Interpreter

Interpreters translate the spoken word from one language to another.

Occupational Hygienist

Occupational hygienists study, anticipate and evaluate hazards and stresses in workplaces, suggest changes to work environments and processes, and provide information to managers and workers on ways to reduce the risk of injury or illness from occupational hazards.

Personal Property/Equipment Appraiser

Personal property and equipment appraisers estimate the value of personal and household items, business assets, vehicles and/or machinery, and prepare reports for owners, buyers, insurance companies, lending institutions, government departments, lawyers, creditors and others.

Public Relations Representative

Public relations representatives help organizations achieve their objectives by facilitating communication links between organizations and the audiences they wish to reach.

Sign Language Interpreter

American Sign Language (ASL) - English interpreters facilitate communication among deaf, hard of hearing and hearing people, using both English and ASL.

Translator

Translators convert written text from one language to another, sometimes changing the structure of the original text but without changing the meaning.

Related Profiles

Many, but not most, people in the following occupations are self-employed or work for firms that provide professional or technical services on a fee-for-service or project basis.

Advertising Copywriter

Advertising copywriters write advertisements for print, outdoor and broadcast media, and write copy for Internet home pages and CD-ROM applications.

Airline Pilot

Airline pilots fly aircraft transporting passengers, cargo and mail. With the exception of some small aircraft, a captain and first officer work together on commercial flights.

Arbitrator

Arbitrators resolve disputes by hearing arguments and evidence, and rendering decisions that may be filed in a court of law and legally enforced.

Assessor

Assessors determine the value of land, buildings, businesses, structures and certain types of equipment for property tax purposes.

Auctioneer

Auctioneers arrange auction sales, evaluate goods and property, conduct bidding and sell items to the highest bidders.

Biologist

Biologists conduct research to learn more about living organisms and ecosystems, manage natural resources, and develop new practices and products in such diverse fields as environmental conservation, forensics and pest control.

Biotechnologist

Biotechnologists apply their knowledge of biochemistry, microbiology and molecular genetics to improve industrial processes and develop new processes in the agricultural, chemical and health care product industries (for example, in the production of drugs, antibiotics or vaccines).

Career Development Professional

Career development professionals advise, coach, provide information and support people who are planning, seeking and managing their life/work direction.

Chef

Chefs are managers who plan, direct and participate in food preparation and cooking activities in restaurants, hotels, institutions and other food establishments.

Chemical Engineer

Chemical engineers develop processes, design equipment and provide technical and management services for plants that convert raw materials into a wide range of end products (e.g. chemicals, pharmaceuticals, food products, fuels, plastics, metals).

Chemical Engineering Technologist

Chemical engineering technologists are involved in process design, plant engineering, environmental control, engineering sales and plant operations. They may work independently or in an engineering team.

College, Technical or Vocational Instructor

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

Combined Laboratory and X-Ray Technologist

Combined laboratory and x-ray technologists conduct routine medical laboratory tests, perform radiography and electrocardiograms and set up, clean and maintain related equipment.

Creative Writer

Creative writers write literary works such as novels, short stories, essays, poetry, magazine articles, speeches, and scripts for radio, television, theatre, film and video productions.

Dietitian

Dietitians develop, implement and evaluate food and nutrition strategies to promote health and treat disease; manage food service systems; and develop and deliver related programs and policies.

Direct Distributor

Direct distributors demonstrate and sell products such as books, candles, clothing, cookware, cosmetics, craft supplies, gourmet food, home care items, toys and vitamins.

Drilling and Service Rig Managers

Oil and gas well drilling and service rig managers supervise large crews of specialized workers on drilling and service rigs.

Ecologist

Ecologists study the relationships of living things to one another and to their environment, and examine the effects of a wide range of factors such as population size, rainfall, temperature, forest fires and major construction projects.

English as a Second Language Teacher - Adults

English as a second language (ESL) teachers provide English language and lifeskills instruction to immigrants, international students and others whose first language is not English.

Entomologist

Entomologists study the classification, life cycle and habits of insects and related life forms, and plan and implement insect surveys and pest management programs.

Environmental Education Specialist

Environmental education specialists help create an awareness of the relationship between human activities and the natural environment. They develop and promote strategies that encourage others to make responsible choices regarding consumer decisions, government policies and corporate responsibilities.

Exhibit Designer

Exhibit designers work with others to research, plan, design and oversee the fabrication and installation of exhibits and displays.

Exploration Geophysicist

Geophysicists use the principles of physics, mathematics and geology to study the surface and internal composition of the earth. Exploration geophysicists look for oil, natural gas, water and minerals for economic exploitation and for environmental projects.

Fashion Designer

Fashion designers create new styles of clothing and accessories such as jewellery, belts, gloves and hats.

Financial Analyst

Financial analysts collect, evaluate and apply financial, economic and statistical data to analyze and evaluate investment opportunities, or make financial decisions and recommendations.

Food Science Technologist

Food science technologists work independently or provide technical support in laboratory analysis, food product development, processing, quality assurance or regulatory positions.

Food Scientist

Food scientists investigate the chemical, microbiological, physical and sensory nature of food, and apply their knowledge in the development, processing, preserving, packaging, distributing and storing of foodstuffs.

Forester

Foresters plan, administer and direct programs related to managing forested lands and related renewable resources.

Geneticist

Geneticists conduct research into the biochemical and physiological aspects of heredity, particularly the role of deoxyribonucleic acid (DNA), and carry out cytogenetic or molecular tests to aid in diagnosing disease.

Geological and Geophysical Technologist

Geological and geophysical technologists may work independently or with a team of geologists, geophysicists, mining engineers or petroleum engineers.

Geologist

Geologists study the nature and history of the Earth's crust and apply their knowledge in exploring for minerals and hydrocarbons (e.g. oil and gas), developing resources for production, building engineering foundations and stable slopes, finding and evaluating ground water supplies and conducting environmental investigations.

Helicopter Pilot

Helicopter pilots transport passengers and freight by helicopter, an aircraft which can move in any direction at varying speeds or remain stationary in the air.

Hydrologist

Hydrologists study the distribution and circulation of water in the atmosphere, on the earth's surface and in soil and underlying rocks.

Hydrometric Technician/Technologist

Hydrometric technicians and technologists may work independently or provide technical support for hydrologists and related scientists and engineers.

Insurance Adjuster

Insurance adjusters investigate insurance claims, make recommendations regarding the payment of benefits from insurance policies, and negotiate payments and settlements.

Insurance Agent/Broker

Insurance agents and brokers assess people's financial needs and advise them on how to protect themselves against financial loss. They may sell life, property, casualty, automobile or health insurance policies to individuals, businesses or public institutions.

Interpretive Naturalist

Interpretive naturalists explain the natural and scientific features of parks, botanical gardens and wilderness areas to visitors.

Investment Advisor

Investment advisors assist clients by providing investment advice and recommending the purchase or sale of securities. Taking into account a client's income, assets, age, tax burden and financial expectations, investment advisors help the client identify financial goals and recommend investments to assist in achieving those goals.

Mechanical Engineering Technologist

Mechanical engineering technologists may work independently or with mechanical engineers in designing, drawing, developing and modifying various types of products, machines, mechanical systems and manufacturing processes.

Mediator

Mediators are neutral third parties who assist people involved in disputes to find mutually acceptable resolutions to their conflicts.

Medical Transcriptionist

Medical transcriptionists are medical language specialists who interpret and transcribe medical dictation that details patient care during and after an illness or injury.

Messenger/Courier

Messengers sort, collect and deliver letters, telegrams, packages or messages; run errands; distribute office supplies and perform similar routine duties.

Meteorologist

Meteorologists study the physics, chemistry and dynamics of the atmosphere and its interaction with land and water surfaces, weather, climate, climate change and their effect on people's health and safety, the economy and the earth's ecosystems.

Microbiologist

Microbiologists study the growth and characteristics of micro-organisms (viruses, bacteria, fungi, parasites) and their interactions with their environment, and develop medical and industrial applications (for example, in the food processing industry).

Mining Engineer

Mining engineers develop and apply methods of locating, extracting and preparing minerals to be used in manufacturing and energy industries.

Model

Models enhance and promote the sale of consumer goods, new fashion designs and other business products and services.

Oceanographer

Oceanographers study all aspects of oceans including their boundaries, contents and role in the earth's climate system.

Oil and Gas Well Loggers and Testers

Oil and gas well loggers and testers operate specialized tools, instruments and equipment to provide services related to oil and gas well drilling, completion and servicing.

Painter and Decorator

Painters and decorators apply paint, wall coverings and other finishes to interior and exterior surfaces of buildings and other structures.

Petroleum Engineer

Petroleum engineers are involved in the exploration and development of oil and gas fields. They apply the principles of geology, physics, chemistry and the engineering sciences to the recovery, development and processing of petroleum.

Petroleum Engineering Technologist

Petroleum engineering technologists are responsible for many of the technical activities involved in the production of oil and gas from conventional reserves, as well as from heavy oil and oil sands. Their knowledge and training is applied to petroleum drilling, geology, production procedures, formation evaluation and reservoir engineering.

Pharmacologist

Pharmacologists are biomedical scientists who investigate the mechanisms underlying the effects of drugs and chemicals on living systems. They use this knowledge to help design and evaluate chemical agents for the prevention and treatment of disease.

Physiologist

Physiologists are scientists who study the whole organism and cellular functioning in humans, animals and plants.

Pollution Control Technologist

Pollution control technologists conduct inspections, tests and field investigations to determine the extent of existing air, water or soil contamination and find ways to control and prevent contamination.

Pre-Press Technician

Pre-press technicians use computer software and computer-controlled machines and equipment to generate and combine text, graphics and other visual elements to prepare copy for printing.

Private Trainer/Facilitator

Private trainers and facilitators conduct workshops, seminars, retreats, conference sessions and individual coaching sessions for young people and adults. They also may develop, design and evaluate training programs, curricula and materials.

Property Manager

Property managers oversee the administration, maintenance, operation and improvement of residential, commercial and industrial properties and represent the interests of property owners.

Psychologist

Psychologists assess, diagnose and treat psychological, emotional and behavioural disorders. They also research and apply theories relating to behaviour and mental processes.

Radiological Technologist

Radiological technologists operate x-ray equipment to produce images that are used to diagnose diseases and injuries.

Real Estate Appraiser

Real estate appraisers estimate the value of vacant and improved residential, commercial, industrial, agricultural and other real estate.

Safety Officer

Safety officers, often called safety co-ordinators, advisers, directors or managers, facilitate the development, implementation and maintenance of workplace safety programs.

Sales Representative (Wholesale, Nontechnical)

Wholesale, nontechnical sales representatives sell their organizations' nontechnical goods and services to retail, commercial, industrial and professional clients.

Seismic Observer

Seismic observers operate geophysical recording instruments used in seismic field tests and perform routine maintenance to ensure optimum data quality.

Technical Sales Representative

Technical sales representatives sell technical goods and services to government, commercial and industrial establishments. They may sell commodities such as computers, software and business machines or services such as technical analysis and consulting services.

Technical Writer

Technical writers translate complex technical information into simpler language. They shape and deliver information to meet the needs of a target audience.

Telemarketer

Telemarketers call potential customers to sell goods and services, request donations or conduct surveys.

Toxicologist

Toxicologists investigate the possible harmful effects on living things of chemical agents (e.g. drugs, pesticides, food additives), physical agents (e.g. ionizing and electro-magnetic radiation) and biological agents (e.g. plant and animal toxins).

Urban, Regional and Park Planners

Urban, regional and park planners study the social, economic, political and physical conditions of urban and rural communities, and develop plans for the overall management and protection of specific land parcels or regions.

Visual Merchandiser

Visual merchandisers capture consumers' attention through the placement of merchandise, signage and interior displays in retail stores and shopping malls.

Webmaster

Webmasters are responsible for the design, development, maintenance and success of World Wide Web sites on the Internet and sites internal to their organizations.

Wireline Field Supervisor

Wireline field supervisors direct the work of wireline operators and collect and process data from wireline operations.

Public Administration Industry

Many occupational profiles describe work in federal, provincial, local and aboriginal government departments and agencies. Following are three lists:

1. profiles about work primarily carried out by government employees or agents
2. related profiles about occupations in which many, but not most, people are employed by government departments or agencies
3. indirectly related profiles about other types of work required in government settings.

Government Employees/Agents

Addictions Counsellor

Addictions counsellors help individuals, families and communities identify and deal with addictions through treatment and prevention programs.

Agricultural Commodity Inspector

Agricultural commodity inspectors ensure that agricultural products meet the production, storage and transportation standards set by federal and provincial agriculture departments.

Air Traffic Controller

Air traffic controllers are responsible for the safe and efficient movement of aircraft within an assigned air space and on the ground at airports.

Archivist

Archivists appraise, acquire, arrange, describe, preserve and facilitate the research of records that have ongoing value.

Assessor

Assessors determine the value of land, buildings, businesses, structures and certain types of equipment for property tax purposes.

Audiologist

Audiologists work with children and adults to prevent, assess, diagnose and provide treatment and counselling for hearing and balance disorders.

Bylaw Enforcement Officer

Bylaw enforcement officers are employed by municipalities to enforce local bylaws. In some cases, they may also be appointed as special constables to enforce certain provincial statutes in their municipality or county jurisdiction.

Canadian Forces Personnel - Commissioned Officer

Commissioned officers plan, organize, lead and manage operations and training activities in the Canadian Forces.

Canadian Forces Personnel - Non Commissioned

Non-commissioned members are skilled trades personnel who provide operational and support services in the Canadian Forces.

Conservation Officer

Conservation officers manage resources, visitor services, maintenance and recreation in provincial parks and educate the public about related issues.

Correctional Officer

Correctional officers are responsible for the supervision, control and custody of offenders who have been sentenced or of people awaiting trial in a court of law.

Correctional Services Worker

Correctional services workers supervise adult and young offenders and administer a wide variety of correctional programs and services.

Curator

Curators acquire, document, study, interpret, maintain and provide access to collections of artifacts (products of human hands) and/or specimens (natural history items). In smaller museums, historic sites or galleries, they may be responsible for the overall management of the facility. In larger institutions, curators are usually responsible for specific collections or represent particular academic disciplines.

Customs Inspector

Customs inspectors administer and enforce Canadian laws and regulations related to customs by controlling the movement of people, vehicles and goods in and out of the country.

Firefighter

Firefighters provide pre-hospital care and protect the public from the dangers of fire and other hazards by controlling and extinguishing fires, rescuing people, responding to dangerous goods incidents, maintaining equipment and practicing fire prevention.

Foreign Service Officer

Foreign service officers work in diplomatic offices in countries around the world providing advice to the Canadian government on foreign policy matters, and acting on behalf of Canada abroad.

Immigration Officer

Immigration officers examine immigration applications, visas and passports, and interview people to determine their eligibility for admission, residence or travel in Canada.

Judge

Judges adjudicate civil and family law cases (cases of non-criminal actions) and criminal cases (cases involving Criminal Code offenses and other federal and provincial statutory offenses) and administer justice according to the law.

Judicial Clerk

Judicial clerks provide paralegal support in provincial and federal courts in Alberta.

Land Titles Examiner

Land titles examiners examine land-related documents as they are presented to the land titles office for registration.

Municipal Administrator

Municipal administrators administer the affairs of municipalities including cities, towns, villages, summer villages, municipal districts and specialized municipalities.

Municipal Recycling Truck Driver

Municipal recycling truck drivers collect, sort and transport recyclable waste materials such as glass, plastic, metal and paper.

Municipal Recycling Waste Handler

Municipal recycling waste handlers sort recyclable domestic and commercial waste materials such as glass, plastic, metal and paper.

Museum Technician

Museum technicians assist curators, conservators and other museum staff with functions such as researching, developing, managing and conserving museum collections, setting up exhibits and delivering public programs.

Occupational Health and Safety Inspector

Occupational health and safety inspectors visit places of employment to detect unsafe or unhealthy working conditions, and ensure compliance with laws and regulations governing workplace safety.

Park Warden

Park wardens are responsible for natural and cultural resource management, public safety and law enforcement in Canada's national parks.

Parole/Probation Officer

Parole officers and probation officers help offenders integrate into the community and, at the same time, protect the community by supervising offenders. Parole officers are employed by Correctional Services Canada to manage the conditional release of federal and provincial offenders. Probation officers are employed by Alberta Solicitor General to conduct investigations and prepare predisposition and presentence reports, and supervise offenders in the community.

Police Officer

Police officers help to protect citizens and their property, maintain public peace, prevent and detect crime, apprehend those who break the law, process court requirements, handle traffic problems, enforce regulations, and act as agents of social change within the community to promote safer neighbourhoods.

Public Health Inspector

Public health inspectors prevent disease and promote health by educating people about public health issues and enforcing health legislation.

Refuse Collector

Refuse collectors pick up non-recyclable waste materials from homes, apartment buildings and businesses along designated routes. They may be employed by municipalities or for private waste management companies.

Refuse Truck Driver

Refuse truck drivers pick up non-recyclable waste materials from homes, apartment buildings and businesses along designated routes, and transport them to landfill sites or incinerators for disposal. They may be employed by municipalities or private waste management companies.

Safety Codes Officer

Safety codes officers inspect the construction, installation and maintenance of structures and systems to ensure compliance with relevant codes, standards and regulations. They are concerned with the elements of public safety covered under the Safety Codes Act.

Speech-Language Pathologist

Speech-language pathologists work with children and adults to prevent, assess, diagnose and provide treatment and counselling for speech, language, voice and swallowing disorders.

Urban, Regional and Park Planners

Urban, regional and park planners study the social, economic, political and physical conditions of urban and rural communities, and develop plans for the overall management and protection of specific land parcels or regions.

Wildland Firefighter

Wildland firefighters work in crews to suppress fires in remote locations.

Related Profiles

Many, but not most, people in the following occupations are employed by government departments or agencies.

Aboriginal Liaison

Aboriginal liaisons help build and maintain positive and effective relationships between Aboriginal and non-Aboriginal people who work for or are served by their employers.

Arbitrator

Arbitrators resolve disputes by hearing arguments and evidence, and rendering decisions that may be filed in a court of law and legally enforced.

Assessor

Assessors determine the value of land, buildings, businesses, structures and certain types of equipment for property tax purposes.

Biologist

Biologists conduct research to learn more about living organisms and ecosystems, manage natural resources, and develop new practices and products in such diverse fields as environmental conservation, forensics and pest control.

Career Development Professional

Career development professionals advise, coach, provide information and support people who are planning, seeking and managing their life/work direction.

Child and Youth Care Worker

Child and youth care workers work to improve the physical, emotional, intellectual and social development of vulnerable children and adolescents.

Collection Agent

Collection agents use various strategies to collect money owed on past due accounts including letter writing, telephone calls and credit management.

Community Health Nurse

Community health nurses provide professional nursing services for individuals, families, communities and groups in a variety of settings.

Conservator

Conservators plan, co-ordinate and participate in the preservation and conservation of cultural property (contemporary, historic, prehistoric and enthnographic objects, natural history specimens, archival materials and works of art) and study environmental influences on artifact preservation.

Economist

Economists conduct research, analyze economic information and prepare reports and plans that are used to analyze various economies and economic problems, forecast and anticipate future problems and opportunities and offer ideas for solutions and new initiatives.

Entomologist

Entomologists study the classification, life cycle and habits of insects and related life forms, and plan and implement insect surveys and pest management programs.

Environmental Auditor

Environmental auditors assess the environmental performance of operations in business and industry.

Food Scientist

Food scientists investigate the chemical, microbiological, physical and sensory nature of food, and apply their knowledge in the development, processing, preserving, packaging, distributing and storing of foodstuffs.

Forester

Foresters plan, administer and direct programs related to managing forested lands and related renewable resources.

Geographer

Geographers study the interactions between the distinctive, dynamic features and characteristics of the biosphere and of the human organization of activity within it. They may specialize in particular phenomena or regions at various scales of analysis.

Gerontological Specialist

Gerontological specialists are professionals who specialize in working with older adults.

Hazardous Waste Management Technologist

Hazardous waste management technologists provide information and advice on the packaging, handling and disposal of toxic wastes; conduct inspections and waste audits; investigate environmental incidents; and monitor and control the clean-up of contaminated land, water and air.

Health Service Administrator

Health service administrators plan, organize, direct, co-ordinate and evaluate health programs and services that promote health and provide care to individuals, groups and communities.

Historian

Historians research, analyze, interpret, synthesize and document human, cultural and technological history.

Home Economist

Home economists enhance people's quality of life by providing advisory, counselling, management, promotion and education services related to money management, consumer education, foods and nutrition, home design, clothing and textiles, and family function.

Interpretive Naturalist

Interpretive naturalists explain the natural and scientific features of parks, botanical gardens and wilderness areas to visitors.

Kinesiologist

Kinesiologists study the factors that influence human movement and look for ways to improve the efficiency and performance of the human body at work, in sport and in daily life.

Legal and Realtime Reporter

Legal and realtime reporters write machine shorthand at a minimum speed of 225 words per minute to capture every word spoken in a variety of settings. Computer technology instantly translates shorthand notes into English text that can be displayed or printed.

Librarian

Librarians assess the informational, educational, cultural and recreational needs of the community they serve, find resources to meet those needs, and provide access to and manage resources.

Library Clerk

Library clerks help librarians and library technicians by serving library users and performing many of the clerical tasks involved in library work.

Library Technician

Library technicians support and assist librarians by performing technical tasks involved in library work such as collection management, cataloguing and document delivery. They also provide reference services and may manage small corporate, school or public libraries.

Mechanical Engineer

Mechanical engineers research, design and evaluate machines, devices, equipment, systems and processes, and plan and oversee their development, installation, operation and maintenance.

Meteorologist

Meteorologists study the physics, chemistry and dynamics of the atmosphere and its interaction with land and water surfaces, weather, climate, climate change and their effect on people's health and safety, the economy and the earth's ecosystems.

Paralegal

Paralegals do independent legal work under the general supervision of lawyers. They perform routine legal and administrative functions and assist lawyers with more complex matters.

Real Estate Appraiser

Real estate appraisers estimate the value of vacant and improved residential, commercial, industrial, agricultural and other real estate.

Recreation and Sport Administrator

Recreation and sport administrators plan, organize and direct sport and recreation programs and services in accordance with policies set by management, owners, boards of directors or executive committees.

Recreation Co-ordinator/Supervisor

Recreation co-ordinators administer and oversee recreation programs and leisure services.

Social Worker

Social workers help individuals, families, groups, communities and organizations develop the skills and resources they need to enhance their social functioning and social environments.

Soil Scientist

Soil scientists study the composition, distribution, development and behaviour of soils and the interaction of soils with soil organisms, animals and plants.

Volunteer Manager

Volunteer managers plan volunteer involvement in organizations and co-ordinate volunteer programs in a variety of settings.

Water and Wastewater Treatment Plant Operator

Water and wastewater treatment plant operators monitor and operate control systems and equipment in water purification and treatment plants, and wastewater, sewage treatment and liquid waste plants.

Indirectly Related Profiles

People in the following occupations may be employed in government departments or agencies.

Accountant

Accounting Technician

Administrative Assistant

Biological Technician

Building Operator

Call Centre Agent

Cashier

Civil Engineer

Computer Programmer
Computer Service Technician
Demographer
Ecologist
Economist
Environmental Engineer
Ergonomist
Forester

Repair, Maintenance, Personal and Other Services Industry

Many occupational profiles describe occupations in which people repair and maintain vehicles, equipment or machinery, provide personal services or work for not-for-profit organizations. Following are six lists of profiles about occupations involved with:

1. repairing and maintaining motor vehicles (e.g. cars, trucks, motorcycles) and related equipment (e.g. trailers)
2. repairing and maintaining personal and household goods (e.g. home and garden equipment, appliances, televisions, furniture, footwear, watches, jewellery, musical instruments)
3. repairing and maintaining electronic equipment (other than televisions, radios and related household equipment)
4. repairing and maintaining other commercial and industrial machinery and equipment
5. providing personal care, laundry or other personal services (e.g. funeral, pet care and photo finishing services)
6. working in religious, civic, professional and other organizations.

Motor Vehicles

Auto Body Technician

Auto body technicians repair, replace and refinish damaged motor vehicle structures and body parts, and interior and exterior finishes.

Auto Detailer

Auto detailers clean and refurbish the interiors and exteriors of automobiles.

Automobile Accessories Installer

Automobile accessories installers install accessories such as heaters, audio systems, security systems, lights, antennas, upholstery and truck box liners.

Automotive Service Technician

Automotive service technicians perform preventative maintenance, diagnose faulty operations and repair automotive vehicles and light trucks.

Heavy Equipment Technician

Heavy equipment technicians maintain, repair and overhaul towed and self-propelled heavy vehicles and industrial heavy equipment and commercial transport devices connected to or moved by a power unit.

Motorcycle Mechanic

Motorcycle mechanics assemble, maintain, repair and restore motorcycles and other multi-wheeled lightweight all-terrain vehicles that do not have lateral seating and are equipped with a handle bar on which the vehicle's controls are located.

Parts Technician

Parts technicians dispense parts and manage inventories of automotive, heavy duty, farm implement, industrial, recreational vehicle, jobbers, plumbing, electrical or other parts.

Recreation Vehicle Service Technician

Recreation vehicle service technicians install, repair and maintain interior and exterior components on motor homes, travel trailers, fifth wheel trailers, truck campers, tent trailers and van conversions.

Transport Refrigeration Technician

Transport refrigeration technicians install, repair and maintain equipment that supplies and contains conditioned air in mobile units which transport perishable goods such as food and medical supplies.

Personal/Household Goods

Appliance Service Technician

Appliance service technicians install, service and repair household and commercial appliances such as ranges, ovens, clothes washers, dryers, freezers, refrigerators, microwave ovens, dishwashers, waste disposers and waste compactors.

Electronic Technician

Electronic technicians service and repair household and business electronic equipment such as radios and televisions, compact disc players and personal computer systems.

Jeweller

Jewellers design, make, repair and appraise fine, fashion and costume jewellery.

Locksmith

Locksmiths install, adjust and repair locks, make keys and change lock combinations. They work on residential, automotive, commercial and institutional locksets and door hardware. Locksmiths may also install and maintain more sophisticated security systems.

Musical Instrument Repair Technician

Musical instrument repair technicians, including piano technicians, pipe organ repairers, band instrument repair technicians and violin repairers, maintain and repair musical instruments.

Optical Technician

Optical technicians manufacture, assemble and repair eyeglasses according to prescriptions from optometrists or ophthalmologists.

Outdoor Power Equipment Technician

Outdoor power equipment technicians repair, service and maintain small gasoline and diesel powered marine, power, recreational and turf equipment used by industry and homeowners.

Upholsterer

Upholsterers cover furniture such as sofas and chairs with fabric, leather and other upholstery materials.

Watch Repairer

Watch repairers clean, oil, adjust and repair all types of mechanical and electronic clocks and watches.

Electronic Equipment

Automated Systems Technologist

Automated systems technologists analyze, implement, maintain and design electro-mechanical (automated) systems. These systems often include mechanical components, sensors, actuators and control systems and may include stationary or mobile robots.

Avionics Technologist

Avionics technologists modify, install, maintain and repair electronic equipment used in aviation.

Biomedical Engineering Technologist

Biomedical engineering technologists maintain and repair the biomedical equipment that physicians, nurses and other medical personnel use to monitor, diagnose and treat medical conditions.

Computer Service Technician

Computer service technicians install, service and configure computer systems and networks including desktop computers, servers and peripherals such as printers, disk drives and CD-ROM drives.

Electronics Engineering Technologist

Electronics engineering technologists apply the practical and theoretical principles of electronics to the development of electronic-based circuits, and the operation and servicing of electronic equipment and systems.

Office Equipment Technician

Office equipment technicians repair and maintain business machines such as photocopiers, facsimile (fax) machines and laser printers.

Other Machinery/Equipment

Agricultural Equipment Technician

Agricultural equipment technicians repair, overhaul and maintain agricultural equipment such as tractors, tillage, seeding and harvesting equipment.

Aircraft Maintenance Engineer

Aircraft maintenance engineers are licensed by Transport Canada to inspect and certify that work done on an aircraft complies with written airworthiness standards. They may specialize in different types of aircraft such as turbo jets, helicopters or propeller-driven airplanes.

Electrical Engineering Technologist

Electrical engineering technologists apply their knowledge and understanding of electrical theory in business, engineering and industry settings.

Electrical Motor Systems Technician

Electrical motor systems technicians test, rebuild and repair electric motors, generators, transformers, controllers and related electrical and mechanical equipment used in commercial, industrial and institutional establishments.

Elevator Constructor

Elevator constructors install, modify, service and repair electric and hydraulic elevators, personnel and man-hoists, moving walkways, stagelifts, escalators and related equipment.

Instrument Technician

Instrument technicians install, maintain and repair the measuring and control instruments used in industrial and commercial processing.

Millwright

Millwrights install, maintain, repair and troubleshoot stationary industrial machinery and mechanical equipment in factories, production plants and recreational facilities.

Railway Car Mechanic

Railway car mechanics inspect, test, maintain, repair and fabricate railway passenger and freight car equipment.

Refrigeration and Air Conditioning Mechanic

Refrigeration and air conditioning mechanics install, maintain, repair and overhaul industrial, commercial and residential refrigeration and air conditioning systems and their component parts.

Sawfiler

Sawfilers repair, set and sharpen blades for band, chain, hand, circular and other types of saws.

Vending Machine Repairer

Vending machine repairers install, service and repair coin-operated vending machines that dispense food, beverages and other products.

Personal Care, Laundry and Other Personal Services

Cosmetician

Cosmeticians demonstrate and sell cosmetic products and advise customers about their use.

Dietitian

Dietitians develop, implement and evaluate food and nutrition strategies to promote health and treat disease; manage food service systems; and develop and deliver related programs and policies.

Domestic Housekeeper

Domestic housekeepers provide household management and personal services for family members in private homes.

Dry Cleaning and Laundry Workers

Dry cleaning workers clean clothes, drapes and other items using dry and wet cleaning techniques. Laundry workers clean clothes and linens that can be washed in water.

Electrologist

Electrologists use a needle-type epilator to permanently remove unwanted hair.

Embalmer

Embalmers prepare the remains of people who have died for public visitation and burial.

Esthetician

Estheticians provide facial and body treatments designed to enhance the physical appearance of their clients.

Food and Nutrition Manager

Food and nutrition managers provide nutrition care and supervise food service operations in health care settings and commercial food service establishments.

Funeral Attendant

Funeral attendants perform a variety of duties in connection with preparing for and conducting funeral services, and maintaining funeral home facilities and equipment.

Funeral Director

Funeral directors take charge of caring for the remains of people who have died, help families plan funeral services, and co-ordinate and manage arrangements for services.

Hairstylist

Hairstylists cut and style hair to suit the client's face and lifestyle.

Massage Therapist

Massage therapists assess the soft tissue and joints of the body and administer massage treatments to relieve pain and symptoms of stress, or to develop, maintain, rehabilitate or augment physical function.

Nanny

Nannies care for children in private homes, providing for their social, emotional, intellectual and physical development.

Personal Care Attendant

Personal care attendants provide personal assistance and support services for elderly, disabled, acute or chronically ill people who require short term assistance or ongoing support.

Pet Groomer

Pet groomers shampoo, clip and groom dogs, cats and other pets to improve and maintain their

hygiene, comfort and appearance.

Photographic Processing Technician

Photographic processing technicians develop images and make prints and slides. They also may enlarge and retouch photographs or use computers to manipulate images.

Psychiatric Aide

Psychiatric aides work under the direct supervision of health care professionals caring for people who are mentally ill, developmentally handicapped, cognitively impaired or brain injured.

Religious, Civic, Professional and Other Organizations

Fundraiser

Fundraisers plan and organize annual fundraising programs, special gift appeals and capital campaigns to raise money for particular charitable groups or causes (e.g. community agencies, arts organizations, educational institutions, hospitals).

Religious Leader

Religious leaders, including ministers, rabbis, imam, priests, pastors, chaplains, bishops, curates and leaders in other religious communities, conduct religious services and provide inspirational, philosophical and religious education and guidance to members of their communities.

Volunteer Manager

Volunteer managers plan volunteer involvement in organizations and co-ordinate volunteer programs in a variety of settings.

Retail Trade Industry

Many occupational profiles describe work involved in selling merchandise and offering after-sales services such as installation or repair. Following are three lists:

1. profiles about occupations involved in selling merchandise and offering related services
2. other profiles related to retail trade
3. indirectly related profiles about other types of work required in the retail trade industry.

Selling Merchandise and Related Services

Appliance Service Technician

Appliance service technicians install, service and repair household and commercial appliances such as ranges, ovens, clothes washers, dryers, freezers, refrigerators, microwave ovens, dishwashers, waste disposers and waste compactors.

Auctioneer

Auctioneers arrange auction sales, evaluate goods and property, conduct bidding and sell items to the highest bidders.

Auto Body Technician

Auto body technicians repair, replace and refinish damaged motor vehicle structures and body parts, and interior and exterior finishes.

Automotive Service Technician

Automotive service technicians perform preventative maintenance, diagnose faulty operations and repair automotive vehicles and light trucks.

Baker

Bakers prepare and bake breads, cakes, cookies, pastries, pies and other baked goods.

Call Centre Agent

Call centre agents respond to questions and inquiries, resolve customer problems and provide information about company policies, products and services over the phone, by fax and via the Internet.

Carpet and Upholstery Cleaner

Carpet and upholstery cleaners operate cleaning machines to clean carpets, rugs and upholstered furniture at customers' premises or in cleaning plants.

Cashier

Cashiers total bills, accept payments, make change, provide information, fill out forms and provide receipts for goods and services in supermarkets, department stores, theatres, restaurants and other establishments.

Computer Service Technician

Computer service technicians install, service and configure computer systems and networks including desktop computers, servers and peripherals such as printers, disk drives and CD-ROM drives.

Direct Distributor

Direct distributors demonstrate and sell products such as books, candles, clothing, cookware, cosmetics, craft supplies, gourmet food, home care items, toys and vitamins.

Fashion Designer

Fashion designers create new styles of clothing and accessories such as jewellery, belts, gloves and hats.

Floral Designer

Floral designers create floral arrangements and purchase, sell and care for flowers and potted plants in retail flower shops.

Gemmologist

Gemmologists apply their knowledge of natural gemstones, synthetics and imitations to identify and grade coloured stones and diamonds.

Interior Decorator

Interior decorators assist clients in co-ordinating the decorative aspects of interior spaces.

Jeweller

Jewellers design, make, repair and appraise fine, fashion and costume jewellery.

Meat Cutter

Meat cutters prepare standard cuts of meat, poultry and fish, and products such as sausage in processing plants or retail food establishments.

Motorcycle Mechanic

Motorcycle mechanics assemble, maintain, repair and restore motorcycles and other multi-wheeled lightweight all-terrain vehicles that do not have lateral seating and are equipped with a handle bar on which the vehicle's controls are located.

Musical Instrument Repair Technician

Musical instrument repair technicians, including piano technicians, pipe organ repairers, band instrument repair technicians and violin repairers, maintain and repair musical instruments.

Optical Technician

Optical technicians manufacture, assemble and repair eyeglasses according to prescriptions from optometrists or ophthalmologists.

Optician

Opticians, sometimes called ophthalmic dispensers, fit and adapt eye glasses, contact lenses, low vision aids and other optical appliances according to prescriptions.

Parts Technician

Parts technicians dispense parts and manage inventories of automotive, heavy duty, farm implement, industrial, recreational vehicle, jobbers, plumbing, electrical or other parts.

Pharmacist

Pharmacists provide services and programs that are designed to promote health and well-being, and treat disease and other disorders through drug therapy, wellness promotion and disease state management.

Pharmacy Assistant/Technician

Pharmacy assistants and technicians assist pharmacists by compounding, packaging and labelling pharmaceutical products, and maintaining prescription records and inventories of medications and pharmaceutical products.

Retail Salesperson

Retail salespersons sell or rent goods and services to customers in stores and other retail businesses.

Retail Shelf Stocker

Retail shelf stockers unpack and price merchandise and stock shelves and displays. They may also pack customers' purchases.

Retail Store Manager

Retail store managers plan, organize, direct and control the operations of stores that sell merchandise and services to the public. They may be employees or self-employed.

Telemarketer

Telemarketers call potential customers to sell goods and services, request donations or conduct surveys.

Upholsterer

Upholsterers cover furniture such as sofas and chairs with fabric, leather and other upholstery materials.

Vending Machine Route Worker

Vending machine route workers fill, clean and maintain vending machines that dispense change or products in places such as offices, schools and hotels.

Visual Merchandiser

Visual merchandisers capture consumers' attention through the placement of merchandise, signage and interior displays in retail stores and shopping malls.

Watch Repairer

Watch repairers clean, oil, adjust and repair all types of mechanical and electronic clocks and watches.

Related Profiles

Banquet Manager

Banquet managers plan, organize and direct the service of food and beverages for banquets and other social functions.

Cabinetmaker

Cabinetmakers build and repair custom or production-type fixtures and furniture made of wood or wood substitutes.

Caterer

Caterers plan, organize and direct the preparation and service of food and beverages for banquets and other social functions.

Cosmetician

Cosmeticians demonstrate and sell cosmetic products and advise customers about their use.

Electrologist

Electrologists use a needle-type epilator to permanently remove unwanted hair.

Electronic Technician

Electronic technicians service and repair household and business electronic equipment such as radios and televisions, compact disc players and personal computer systems.

Esthetician

Estheticians provide facial and body treatments designed to enhance the physical appearance of their clients.

Exhibit Designer

Exhibit designers work with others to research, plan, design and oversee the fabrication and

installation of exhibits and displays.

Financial Customer Service Representative

Financial customer service representatives promote their financial institution's products and services, open and close accounts, keep records of transactions, accept payments, and receive and pay out money.

Floorcovering Installer

Floorcovering installers install, repair and replace resilient floorcovering materials such as underlay, carpet, sheet goods (e.g. vinyl) and resilient tile in commercial, residential and industrial buildings.

Food and Beverage Server

Food and beverage servers accept and serve customers' food and beverage orders in restaurants and bars.

Food Service Helper

Food service helpers clear tables and assist workers who serve food and beverages in restaurants and other food service establishments.

Furniture Mover

Furniture movers move furniture, office supplies and equipment to and from homes, apartments, offices and storage establishments.

Glazier

Glaziers cut and install glass and aluminum systems for commercial, residential and automotive applications.

Hairstylist

Hairstylists cut and style hair to suit the client's face and lifestyle.

Herbalist

Herbalists advise people about the use of herbs and dietary supplements to maintain good health and relieve symptoms related to conditions such as arthritis, rheumatism, asthma, skin disorders or stomach ailments.

Interior Designer

Interior designers create and enhance interior spaces to improve quality of life, increase productivity and protect public health, safety and welfare.

Messenger/Courier

Messengers sort, collect and deliver letters, telegrams, packages or messages; run errands; distribute office supplies and perform similar routine duties.

Nail Technician

Nail technicians clean, shape, extend and polish clients' fingernails and toenails.

Office Equipment Technician

Office equipment technicians repair and maintain business machines such as photocopiers, facsimile (fax) machines and laser printers.

Outdoor Power Equipment Technician

Outdoor power equipment technicians repair, service and maintain small gasoline and diesel powered marine, power, recreational and turf equipment used by industry and homeowners.

Photographer

Photographers use their skills and artistic talent to capture people, products, events, fashion,

landscapes, legal evidence and other subjects on film or silicon-based media.

Photographic Processing Technician

Photographic processing technicians develop images and make prints and slides. They also may enlarge and retouch photographs or use computers to manipulate images.

Postal/Wicket Clerk

Postal/wicket clerks provide postal services for customers and record transactions at sales counters and postal wickets.

Private Investigator

Private investigators gather information and conduct surveillance to secure evidence relating to a wide range of private, corporate and legal interests.

Restaurant Manager

Restaurant managers plan, organize, direct and control the operation of establishments in which food and beverages are served.

Security Alarm Installer

Security alarm installers install and maintain electronic security alarm systems for homes, businesses and industrial properties.

Shipper and Receiver

Shippers and receivers wrap, pack and unpack, store, ship, receive and record the movement of parts, supplies, materials, equipment and stock to and from retailers, wholesalers, manufacturing companies, and other commercial and industrial organizations.

Travel Consultant

Travel consultants, on behalf of travel suppliers, represent, advertise, promote and sell a wide variety of travel services to the public.

Warehousing Professionals

Warehousing professionals are responsible for general warehousing activities such as shipping and receiving and planning and managing the flow of goods into, within and from organizations.

Indirectly Related Profiles

Transportation and Warehousing Industry

A number of occupational profiles describe work associated with transporting passengers and goods, and/or storing goods. Following are five lists:

1. profiles about transporting passengers or goods via air, rail, water, truck or public transit
2. profiles about warehousing and pipeline transportation
3. profiles about postal/courier services
4. profiles about other occupations related to transportation and warehousing
5. indirectly related profiles about other types of work performed in the transportation and warehousing industry.

Transporting Passengers and/or Goods

Aerospace Engineer

Aerospace engineers research, design, develop, test, manufacture and maintain aerospace vehicles and systems such as commercial and military aircraft, missiles, spacecraft and related aerospace equipment.

Air Traffic Controller

Air traffic controllers are responsible for the safe and efficient movement of aircraft within an assigned air space and on the ground at airports.

Aircraft Maintenance Engineer

Aircraft maintenance engineers are licensed by Transport Canada to inspect and certify that work done on an aircraft complies with written airworthiness standards. They may specialize in different types of aircraft such as turbo jets, helicopters or propeller-driven airplanes.

Airline Pilot

Airline pilots fly aircraft transporting passengers, cargo and mail. With the exception of some small aircraft, a captain and first officer work together on commercial flights.

Airline Ticket Agent

Airline ticket agents make reservations and sell tickets to passengers travelling by air.

Avionics Technologist

Avionics technologists modify, install, maintain and repair electronic equipment used in aviation.

Bus Driver

Bus drivers transport passengers from place to place along established routes. They may operate transit buses, motor coaches or school buses.

Bus Line Ticket Agent

Bus line ticket agents provide information and sell tickets to passengers travelling by motor coach.

Chauffeur

Chauffeurs drive limousines and large sedans to transport passengers, ranging from corporate executives to children, from place to place.

Dispatcher

Dispatchers receive requests for service or emergency assistance and relay information to field personnel.

Flight Attendant

Flight attendants are responsible for the on-board safety of airline passengers and crew members. They assist passengers and other crew members in emergency situations and offer a variety of

services to passengers to make a trip as pleasant as possible.

Flight Service Specialist

Flight service specialists provide information for pilots that is relevant to the safe completion of their flights.

Furniture Mover

Furniture movers move furniture, office supplies and equipment to and from homes, apartments, offices and storage establishments.

Heavy Equipment Technician

Heavy equipment technicians maintain, repair and overhaul towed and self-propelled heavy vehicles and industrial heavy equipment and commercial transport devices connected to or moved by a power unit.

Helicopter Pilot

Helicopter pilots transport passengers and freight by helicopter, an aircraft which can move in any direction at varying speeds or remain stationary in the air.

Municipal Recycling Truck Driver

Municipal recycling truck drivers collect, sort and transport recyclable waste materials such as glass, plastic, metal and paper.

Railway Car Mechanic

Railway car mechanics inspect, test, maintain, repair and fabricate railway passenger and freight car equipment.

Refuse Truck Driver

Refuse truck drivers pick up non-recyclable waste materials from homes, apartment buildings and businesses along designated routes, and transport them to landfill sites or incinerators for disposal. They may be employed by municipalities or private waste management companies.

Station Attendant/Ramp Service Agent

Station attendants are employed at airports to operate ramp servicing vehicles and equipment, handle baggage and perform other duties on the ramp and in cargo warehouses.

Taxi Driver

Taxi drivers operate automobiles and vans to transport passengers from one place to another.

Traffic Manager

Traffic managers direct and co-ordinate the transportation of incoming materials from suppliers or raw material sources and outgoing products to distribution houses and customers.

Transport Refrigeration Technician

Transport refrigeration technicians install, repair and maintain equipment that supplies and contains conditioned air in mobile units which transport perishable goods such as food and medical supplies.

Truck Driver

Truck drivers operate gasoline or diesel-powered trucks, tractor-trailers and similar vehicles to transport goods and materials over local routes or long distances.

Vending Machine Route Worker

Vending machine route workers fill, clean and maintain vending machines that dispense change or products in places such as offices, schools and hotels.

Warehousing and Pipeline Transportation

Gas Pipeline Operators and Maintenance Workers

Gas pipeline operators and maintenance workers monitor the day to day operations of meter and compressor stations essential to the distribution and smooth flow of gas through pipelines.

Oil Pipeline Operators and Maintenance Workers

Oil pipeline operators and maintenance workers monitor and conduct the day to day operations of oil pipelines and associated facilities.

Warehousing Professionals

Warehousing professionals are responsible for general warehousing activities such as shipping and receiving and planning and managing the flow of goods into, within and from organizations.

Postal and Courier Services

Letter Carrier

Letter carriers are employees of Canada Post who sort and deliver mail for established routes, record delivery of registered mail and collect payments for cash-on-delivery (COD) parcels.

Mail Sorter

Mail sorters collect, process and sort incoming and outgoing mail, parcels and oversized mail for dispatch and delivery.

Messenger/Courier

Messengers sort, collect and deliver letters, telegrams, packages or messages; run errands; distribute office supplies and perform similar routine duties.

Postal/Wicket Clerk

Postal/wicket clerks provide postal services for customers and record transactions at sales counters and postal wickets.

Related Profiles

Canadian Forces Personnel - Commissioned Officer

Commissioned officers plan, organize, lead and manage operations and training activities in the Canadian Forces.

Canadian Forces Personnel - Non Commissioned

Non-commissioned members are skilled trades personnel who provide operational and support services in the Canadian Forces.

College, Technical or Vocational Instructor

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

Emergency Medical Responder

Emergency medical responders (EMRs) provide pre-hospital emergency medical care and transportation for the sick and injured.

Emergency Medical Technician - Ambulance

Emergency medical technicians - ambulance (EMT-As) provide pre-hospital emergency medical care at the basic life support level as well as transportation for the sick and injured.

Emergency Medical Technologist - Paramedic

Emergency medical technologist - paramedics (EMT-Ps) provide pre-hospital emergency medical care at the advanced life support level as well as transportation for the sick and injured.

Field Production Operator

Field production operators are responsible for the initial separation processes or the special treatment required to ensure that impurities such as water, gas and sediments are removed from oil and gas in the field. Once separated, the oil or gas is transported by pipeline to refineries, gas plants or markets.

Gas Plant Operator

Gas plant operators control automated processes which convert raw natural gas into forms that can be used by consumers.

Heavy Equipment Operator

Heavy equipment operators use a variety of mobile machines and attachments to excavate, grade and landscape earth or move workers, materials and equipment.

Hotel and Motel Desk Clerk

Desk clerks are employed in hotels and motels, and are often the first people to greet incoming guests.

Operations Research Analyst

Operations research analysts use mathematical modelling and information technology to develop decision support systems for decision-makers in public and private organizations.

Refinery/Upgrader Process Operator

Refinery/upgrader process operators are responsible for the day to day operations of oil refineries and upgraders.

Shipper and Receiver

Shippers and receivers wrap, pack and unpack, store, ship, receive and record the movement of parts, supplies, materials, equipment and stock to and from retailers, wholesalers, manufacturing companies, and other commercial and industrial organizations.

Utilities Industry

A number of occupational profiles describe work in power, water and natural gas utility companies. Following are three lists:

1. profiles about occupations involved in the generation, transmission and distribution of electric power, the distribution of natural gas or the operation of water and sewage systems
2. profiles about other occupations in which many people are employed by power, water or gas utilities
3. indirectly related profiles about other types of work required in power, water and gas utility companies.

Power, Water and Gas Utilities

Gas Utility Operator

Gas utility operators install and service gas utility pipeline systems that transport natural gas from its source to points of use such as building meter sets.

Power Lineman

Power linemen construct, maintain and repair overhead and underground electrical power transmission and distribution systems.

Power System Electrician

Power system electricians install, maintain and repair electrical power generation, transmission and distribution systems and equipment.

Utility Clerk

Utility clerks record information, receive payments, process forms, answer enquiries and handle complaints from the public regarding utility company services and policies.

Water and Wastewater Treatment Plant Operator

Water and wastewater treatment plant operators monitor and operate control systems and equipment in water purification and treatment plants, and wastewater, sewage treatment and liquid waste plants.

Related Profiles

Call Centre Agent

Call centre agents respond to questions and inquiries, resolve customer problems and provide information about company policies, products and services over the phone, by fax and via the Internet.

Dispatcher

Dispatchers receive requests for service or emergency assistance and relay information to field personnel.

Electrician

Electricians install, alter, repair and maintain electrical systems designed to provide heat, light, power, control, signals or fire alarms for all types of buildings, structures and premises.

Environmental Auditor

Environmental auditors assess the environmental performance of operations in business and industry.

Environmental Engineer

Environmental engineers design systems, processes and equipment for air, water and soil pollution

assessment, prevention and control, solid and hazardous waste management, and the remediation of contaminated sites.

Gasfitter

Gasfitters size, install, test, adjust and service natural gas and propane equipment ranging from residential furnaces to industrial boilers.

Heavy Equipment Operator

Heavy equipment operators use a variety of mobile machines and attachments to excavate, grade and landscape earth or move workers, materials and equipment.

Instrument Technician

Instrument technicians install, maintain and repair the measuring and control instruments used in industrial and commercial processing.

Pollution Control Technologist

Pollution control technologists conduct inspections, tests and field investigations to determine the extent of existing air, water or soil contamination and find ways to control and prevent contamination.

Power Engineer

Power engineers supervise, operate and maintain machinery and boilers that provide power, heat, refrigeration and other utility services to heavy industry and large building complexes.

Wholesale Trade Industry

A number of occupational profiles describe work in the wholesale trade industry. Following are three lists:

1. profiles about occupations directly involved in the sale and distribution of wholesale goods
2. profiles about related occupations in which many people work in the wholesale industry
3. indirectly related profiles about other types of work performed in wholesale distribution establishments.

Wholesale Sales and Distribution

Auctioneer

Auctioneers arrange auction sales, evaluate goods and property, conduct bidding and sell items to the highest bidders.

Direct Distributor

Direct distributors demonstrate and sell products such as books, candles, clothing, cookware, cosmetics, craft supplies, gourmet food, home care items, toys and vitamins.

Sales Representative (Wholesale, Nontechnical)

Wholesale, nontechnical sales representatives sell their organizations' nontechnical goods and services to retail, commercial, industrial and professional clients.

Shipper and Receiver

Shippers and receivers wrap, pack and unpack, store, ship, receive and record the movement of parts, supplies, materials, equipment and stock to and from retailers, wholesalers, manufacturing companies, and other commercial and industrial organizations.

Technical Sales Representative

Technical sales representatives sell technical goods and services to government, commercial and industrial establishments. They may sell commodities such as computers, software and business machines or services such as technical analysis and consulting services.

Truck Driver

Truck drivers operate gasoline or diesel-powered trucks, tractor-trailers and similar vehicles to transport goods and materials over local routes or long distances.

Warehousing Professionals

Warehousing professionals are responsible for general warehousing activities such as shipping and receiving and planning and managing the flow of goods into, within and from organizations.

Related Profiles

Many people employed in the following occupations work in the wholesale trade industry.

Agricultural Equipment Technician

Agricultural equipment technicians repair, overhaul and maintain agricultural equipment such as tractors, tillage, seeding and harvesting equipment.

Customs Broker

Customs brokers are employed by importers and exporters to clear goods through customs and ensure their timely delivery. They may also be involved in logistics or supply chain management.

Furniture Mover

Furniture movers move furniture, office supplies and equipment to and from homes, apartments,

offices and storage establishments.

Gemmologist

Gemmologists apply their knowledge of natural gemstones, synthetics and imitations to identify and grade coloured stones and diamonds.

Heavy Equipment Technician

Heavy equipment technicians maintain, repair and overhaul towed and self-propelled heavy vehicles and industrial heavy equipment and commercial transport devices connected to or moved by a power unit.

Marketing Manager

Marketing managers plan, organize, co-ordinate and control the activities of organizations or departments within organizations involved in marketing products or services.

Meat Cutter

Meat cutters prepare standard cuts of meat, poultry and fish, and products such as sausage in processing plants or retail food establishments.

Parts Technician

Parts technicians dispense parts and manage inventories of automotive, heavy duty, farm implement, industrial, recreational vehicle, jobbers, plumbing, electrical or other parts.

Traffic Manager

Traffic managers direct and co-ordinate the transportation of incoming materials from suppliers or raw material sources and outgoing products to distribution houses and customers.

Vending Machine Repairer

Vending machine repairers install, service and repair coin-operated vending machines that dispense food, beverages and other products.

E. Occupational Profile Reports by Title, National Occupational Classification (NOC) Number, Primary Interest, Industry Cluster and Production Date

February 14, 2006

This section contains a code key and five reports.

The OCCinfo Reports Code Key is in front of the reports. It contains definitions of the code levels for interests, education, growth rate and lifting.

The five reports are:

1. Occupational Profiles by Title
2. Occupational Profiles by NOC Number
3. Occupational Profiles by Primary Interest
4. Occupational Profiles by Industry Cluster
5. Occupational Profiles by Production Date

Each report shows the NOC number, interest codes, production date, education level, outlook level and lifting level for every occupational profile.

OCCinfo Reports Code Key

February 14, 2006

OCCinfo reports include the following information about each Alberta occupational profile:

- National Occupational Classification (NOC) number
- production date (the month and year the whole profile was last updated)
- letter codes for Canadian Work Preference Inventory (CWPI) interests associated with the NOC occupational group
- a code number for the **minimum** level of education/training required to enter the occupation
- a code number for the rate at which the occupation is growing
- a code number for how much weight people in the occupation are routinely required to lift.

Interest Codes[1]

D Directive persons like to take charge and control situations. They like to take responsibility for projects that require planning, making decisions and co-ordinating the work of others. They are able to give direction and instructions easily. They enjoy organizing their own activities. They see themselves as independent and self-directing.

I Innovative persons like to explore things in depth and arrive at solutions to problems by experimenting. They are interested in initiating and creating different ways to solve questions and present information. They enjoy scientific subjects. Innovative persons prefer to be challenged with new and unexpected experiences. They adjust to change easily.

M Methodical persons like to have clear rules and organized methods to guide their work. They prefer working under the direction or supervision of others, or to be guided by established policies and procedures. Methodical persons like to work on one thing until it is completed. They enjoy following a set routine and prefer work that is free from the unexpected.

O Objective persons enjoy working with tools, equipment, instruments and machinery. They like to repair or fabricate things from various materials according to specifications and using established techniques. Objective persons are interested in finding out how things operate and how they are built.

S Social persons like dealing with people. They enjoy caring for and assisting others in identifying their needs and solving their concerns. They prefer to be involved in work that requires interpersonal contact.

Minimum Education/Training Codes

1	Education/training requirements vary
2	At least Grade 10
3	Less than high school
4	High school diploma
5	Apprenticeship Trade – Grade 9
6	Apprenticeship Trade – Grade 10
7	Apprenticeship Trade – Grade 11
8	Apprenticeship Trade – Grade 12
9	Apprenticeship Trade
10	Designated Occupation
11	Designated Occupation – Grade 9
12	1 year post-secondary education/training
13	2 years post-secondary education/training
14	3 years post-secondary education/training
15	4 years post-secondary education/training
16	5 years post-secondary education/training
17	6 years post-secondary education/training
18	7 years post-secondary education/training
19	8+ years post-secondary education/training

Alberta Occupational Growth Rate Codes

1	Occupational growth information is not available
2	Above average occupational growth in Alberta
3	Average occupational growth in Alberta
4	Below average occupational growth in Alberta

Lifting Requirement Codes

1	Lifting requirements vary
2	Occupations requiring lifting up to 5 kg
3	Occupations requiring lifting up to 10 kg
4	Occupations requiring lifting up to 25 kg
5	Occupations requiring lifting more than 25 kg

Occupational Profiles by Title

Printed February 14, 2006

Occupational Profile Title	NOC Number	Interest Code	Production Date	Education Level	Outlook Level	Lifting Level
Aboriginal Liaison	1221	MDS	MAR 2005	1	3	2
Accommodation Manager	0632	DMS	MAR 2003	13	3	2
Accountant	1111.2	MID	NOV 2005	15	3	2
Accounting Technician	1231	MDi	OCT 2005	4	3	2
Actor	5135.1	MId	MAY 2003	1	3	3
Actuary	2161.3	IMD	NOV 2005	15	3	2
Acupuncturist	3232.2	SIM	MAR 2005	14	3	3
Addictions Counsellor	4153	SId	DEC 2005	13	3	2
Administrative Assistant	1411	OMi	OCT 2005	12	4	2
Advertising Account Executive	1122.2	ISD	FEB 2004	1	2	2
Advertising Copywriter	5121.3	IMd	MAY 2005	1	3	2
Aerospace Engineer	2146	IOD	JUN 2004	15	3	1
Agricultural Commodity Inspector	2222.2	Mid	FEB 2005	1	3	3
Agricultural Engineer	2148.1	IOD	JUN 2004	15	3	4
Agricultural Equipment Technician	7312	OMI	FEB 2006	9	3	4
Agricultural Products Processing Machine Operator	9461.2	OMi	FEB 2005	1	3	4
Agrologist	2123	ISD	AUG 2005	15	3	2
Air Traffic Controller	2272.1	OMD	OCT 2005	4	3	2
Aircraft Maintenance Engineer	7315.1	OIM	SEP 2003	13	2	4
Airline Pilot	2271.1	OID	OCT 2003	4	3	3
Airline Ticket Agent	6433.1	MSO	OCT 2003	4	3	2
Animal Care Attendant	6483	MOD	FEB 2005	1	3	4
Animal Health Technologist	3213	MOI	FEB 2005	13	3	4
Animator	5241.1	IMS	MAY 2005	1	3	2
Announcer	5231	MSI	MAY 2003	12	3	3
Anthropologist	4169.1	IDM	NOV 2005	15	3	2
Appliance Service Technician	7332.1	OMi	FEB 2006	6	3	4
Arbitrator	1121	IMS	OCT 2005	1	3	2
Arborist	2225.1	OMd	MAR 2005	1	3	4
Archaeologist	4169.2	IDM	NOV 2005	15	3	3
Architect	2151	ISD	MAR 2005	17	3	2
Architectural Technologist	2251	IMO	MAR 2005	13	3	2
Archivist	5113	MIS	DEC 2005	17	4	2
Assessor	1235.1	Mds	DEC 2005	13	4	2
Astronomer	2111.2	IOD	JAN 2006	17	3	2
Athletic Therapist	3144	SIM	MAR 2005	15	2	4
Auctioneer	6411	SMd	OCT 2003	1	3	3
Audiologist	3141.1	OIS	DEC 2004	17	2	2
Auto Body Technician	7322	OMi	FEB 2006	6	4	4
Auto Detailer	6662.5	OMd	JAN 2004	3	4	3
Automated Systems Technologist	2232.1	OIM	JUL 2004	13	2	4
Automobile Accessories Installer	9482.1	OMi	SEP 2003	1	3	4
Automotive Service Technician	7321.1	OIM	FEB 2006	6	3	4
Avionics Technologist	2244.3	OMi	JUN 2004	13	2	4
Baker	6252	MOd	FEB 2006	5	4	4
Banking/Investment Manager	0122.1	DMs	DEC 2005	13	3	2
Banquet Manager	0631	DMS	FEB 2004	1	3	2
Bartender	6452	MSd	MAR 2003	4	3	3
Beekeeper	8251	DMO	MAR 2005	1	4	4
Binding and Finishing Machine Operators	9473.1	OMi	DEC 2005	1	4	4
Binding and Finishing Machine Operators	9473.2	OMi	DEC 2005	1	4	4
Biochemist	2112	IOD	SEP 2005	15	3	2
Biological Technician	2221.2	Moi	SEP 2005	13	3	3

Occupational Profile Title	NOC Number	Interest Code	Production Date	Education Level	Outlook Level	Lifting Level
Biologist	2121.1	IOD	JAN 2005	15	3	2
Biomedical Engineering Technologist	2241.1	OIM	JUN 2004	13	2	4
Biotechnologist	2121.2	IOD	SEP 2005	15	3	2
Blaster	7372.2	OID	MAR 2005	1	2	4
Boilermaker	7262	OMI	FEB 2006	7	2	4
Bricklayer	7281	OMI	FEB 2006	5	3	4
Broadcast Maintenance Technologist	5224	OMi	JUL 2004	13	3	2
Building Operator	6663	MOI	FEB 2005	3	4	5
Building Operator	7351	Oim	FEB 2005	3	4	5
Building Superintendent	6663	MOI	DEC 2005	1	4	4
Bus Driver	7412.1	OMS	SEP 2003	1	3	4
Bus Line Ticket Agent	6434.1	MSO	OCT 2003	1	3	2
Bylaw Enforcement Officer	6463.2	MDs	APR 2003	1	3	4
Cabinetmaker	7272	OMI	FEB 2006	7	3	4
Call Centre Agent	1453.2	MSi	NOV 2005	1	3	2
Canadian Forces Personnel - Commissioned Officer	0643	DMs	JAN 2005	1	1	1
Canadian Forces Personnel - Non Commissioned	6464	MOs	JAN 2005	2	1	4
Cardiology Technologist	3217	OMi	NOV 2004	12	2	4
Career and Technology Studies Teacher	4141	SID	JAN 2006	15	3	2
Career Development Professional	4213	SMI	NOV 2005	1	3	2
Carpenter	7271	OMI	FEB 2006	5	2	4
Carpet and Upholstery Cleaner	6662.1	OMd	JUN 2003	1	4	4
Cartoonist	5241.1	IMS	MAY 2005	1	3	2
Cashier	6611	MOs	OCT 2003	1	4	3
Casino Dealer	6443.2	SMD	SEP 2004	3	3	2
Casting Director	5226.7	DMO	MAY 2003	1	3	2
Caterer	0631	DMS	FEB 2004	1	3	4
Chauffeur	7413.2	OMS	OCT 2003	1	3	4

F. Definitions of *Employment Outlook, Location, Employment Turnover, Occupational Growth*, and *Size of Occupation* as used in the Occupational Profiles

February 14, 2006

Employment Outlook

The number of job openings in a particular occupation will depend on:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment
- location in Alberta
- employment turnover (work opportunities generated by people leaving existing positions)
- occupational growth (work opportunities resulting from the creation of new positions that never existed before)
- size of the occupation.

For the 2005 to 2010 forecast:

- **below average** occupation growth is less than 1.5 per cent a year
- **average** occupation growth is 1.5 to 2.5 per cent a year
- **above average** occupation growth is over 2.5 per cent a year

Location

The employment outlook in an occupation may vary from one location to another in Alberta. For example, the employment outlook may be different in a rural or urban community, or in a prairie or forested region of the province. It is a good idea to discuss your career plans with people who are knowledgeable about the occupations that interest you and the **local** employment outlook for those occupations.

Employment Turnover

Employment turnover refers to job vacancies created by people leaving existing positions. For example, people may quit because they have found other jobs, been promoted or decided to retire.

A significant number of job openings are created by employment turnover. In some occupations, more job openings are created by employment turnover than by occupational growth.

Occupational Growth

Occupational growth refers to the creation of **new** positions that never existed before. The occupational growth rate is the rate at which the number of people employed in an occupation is expected to grow each year. For example, if there are 1,000 people currently employed in an occupation that is growing at an average rate (1.5 to 2.5 per cent), there probably will be 15 to 25 new jobs created each year.

The occupational growth rates in Alberta occupational profiles are based on the Alberta Modified COPS Outlook for the period from 2005 to 2010 in Alberta (COPS stands for Canadian Occupational Projection System). Growth rates are **averages** of **expected** annual growth rates and therefore do not reflect changes from year to year over the forecast period.

Projections are based on federal government data about occupational groups defined at the four-digit level in the National Occupational Classification (NOC) system. When an occupation described in a profile is one of several occupations in an occupational group, it is important to **consider how demand for other types of work in the group may influence a projection.**

NOC occupational groups often include several related occupations. For example, the 4212: Community and Social Services Workers occupational group includes a number of occupations, six of which are described in separate Alberta occupational profiles:

- Child and Youth Care Worker
- Community Health Representative
- Life Skills Coach
- Mental Health Worker
- Rehabilitation Practitioner
- Volunteer Manager.

The same occupational growth rate is reported in all six profiles because the Alberta Modified COPS Outlook data is based on NOC groups at the four-digit level.

If some occupations are **growing significantly faster or slower** than other occupations in a group, the **rate for the whole group** may be affected.

For example, if most people in the occupational group are employed in occupations that are growing at an above average rate, the occupational growth projection for the group as a whole will probably be above average. If some are employed in occupations that are growing at an above average rate but most are employed in occupations growing at an average rate and/or some are employed in occupations growing at a below average rate, the occupational growth

projection for the group as a whole will probably be average. Likewise, occupational groups forecasted to grow at a below average rate may include some occupations that are in decline and others that are growing at an average rate.

Size of the Occupation

High employment turnover or occupational growth does not necessarily mean that there will be many job openings in an occupation. Likewise, average or below average employment turnover or occupational growth does not necessarily mean that there will be only a few job openings in an occupation. It depends on the size of the occupation.

Examples:

Number of People employed in the occupation		Occupational growth rate	Number of new positions created each year
100	x	over 2.5 per cent (**above** average)	= more than 2
1,000	x	1.5 to 2.5 per cent (average)	= 15 to 25
10,000	x	less than 1.5 per cent (**below** average)	= fewer than 150

OCC info Alberta Occupational Profiles

Alberta Human Resources and Employment

Aboriginal Liaison

Produced MARCH 2005

Aboriginal liaisons help build and maintain positive and effective relationships between Aboriginal and non-Aboriginal people who work for or are served by their employers.

NOC Number(s): 1221
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D S**

Duties

Aboriginal liaisons are employed by public and private sector organizations. In general, they:

- bring together representatives of the Aboriginal community, the employing organization, government agencies and unions
- promote cross-cultural understanding and facilitate communication between people of Aboriginal and non-Aboriginal origin
- advise others in their organizations regarding Aboriginal issues, cultures, trends and demographics
- recommend ways to establish and maintain good working relationships between Aboriginal and non-Aboriginal employees, clients or customers
- work co-operatively with other community agencies to promote awareness of Aboriginal issues and support Aboriginal employment and career development.

Depending on the nature of the employing organization, Aboriginal liaisons may:

- promote their organizations' services and policies in the Aboriginal community
- promote their organization as a potential employer
- facilitate access to their organizations' services
- educate others in their organizations about discrimination
- provide advice regarding effective intervention and prevention strategies, and help implement strategies
- identify appropriate resources for use with Aboriginal clients or customers
- promote the integration of Aboriginal content in programs and resources
- assist in the development and delivery of related programs and support services.

Working Conditions

Aboriginal liaisons usually work standard weekday office hours but may be required to attend evening or weekend meetings. They spend much of their time away from their offices delivering programs, acting as a community resource and building community relationships. A considerable amount of travel may be required.

Personal Characteristics

Aboriginal liaisons need the following characteristics:

- excellent communication skills, in person and in writing
- the ability to work effectively as part of a team
- the ability to consistently project a positive, professional image, both on and off the job
- the ability to maintain a balanced perspective
- excellent organizational and time-management skills
- an interest in facilitating individual and organizational growth.

They should enjoy co-ordinating programs and services, and working with people from a wide variety of backgrounds (e.g. Aboriginal community leaders, government representatives, managers at all levels of the organization).

Educational Requirements

Aboriginal liaisons need a combination of related education and experience. They must be:

- able to write concise reports and facilitate communication and group learning
- knowledgeable about local Aboriginal history, cultures and issues
- knowledgeable about the field in which they work (e.g. business administration, oil and gas exploration or extraction, health care)
- knowledgeable about their employer's organizational structure, culture and services/products.

Some employers require applicants to have a high school diploma or three to five years of related experience. Other employers require applicants to have a post-secondary diploma or degree in a field related to the organization's business (e.g. marketing, social services, policing, education, banking). A cost-conscious attitude and computer literacy are definite assets. In particular, Aboriginal liaisons should be able to use presentation software and related technology effectively.

Job applicants may be expected to provide references from respected members of the Aboriginal community.

Employment and Advancement

Aboriginal liaisons are employed by large organizations that are currently dominated by people of non-Aboriginal origin (e.g. school authorities, post-secondary institutions, police forces, regional health authorities, government departments, banks and other large corporations).

This is a growing but relatively small occupation so there are a limited number of new positions created each year in Alberta.

Salary

(section revised SEPTEMBER 2005)

Salaries for Aboriginal liaisons vary considerably from one position to another, depending on the size and nature of the organization, the responsibilities of the position, and the qualifications required. Aboriginal liaisons who have professional qualifications earn salaries comparable to their professional counterparts.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Administrative Officers occupational group working part-time or full-time earned from **$11,900 to $145,000 a year.** The average salary was **$45,100 a year.**

Accommodation Manager

Produced MARCH 2003

Accommodation managers direct and control the operations of privately and publicly owned hotels, motels, campgrounds, trailer parks, camps, hostels and post-secondary institution residences.

NOC Number(s): 0632
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M S**

Duties

Accommodation managers are responsible for operating their establishments efficiently and economically, satisfying guests and handling any problems that may arise.

In smaller establishments, accommodation managers may have a limited staff and personally direct all aspects of the operation. Managers of small motels or hostels, for example, may perform the duties of a front desk clerk, as well as manage the operation.

In larger establishments such as luxury hotels, general managers may have several assistant managers or department heads. The general manager's responsibilities might include:

- establishing and controlling budgets and approving contracts
- strategic planning
- setting room rates
- approving expenditures
- staff training
- establishing standards of quality service
- marketing and public relations.

Department heads under the general manager would be responsible for day-to-day operations such as:

- accounting
- marketing and sales
- human resources
- front desk services
- food and beverage services
- housekeeping and maintenance
- security
- convention services and/or hotel entertainment services.

Working Conditions

Working conditions for accommodation managers are as varied as the establishments they operate. Most establishments are open 24 hours a day, seven days a week, and managers may work long, irregular hours in addition to always being on call for emergencies. Some managers live in their establishments and are constantly involved with operations. The work is sometimes hectic and stressful.

Personal Characteristics

Accommodation managers need the following characteristics:

- excellent communication skills, in writing and in person
- good general health, stamina and mental alertness to cope with the long, irregular hours of work
- the ability to get along with all kinds of people
- leadership and decision-making skills

- the ability to adapt to changing customer needs and the unexpected
- the ability to remain calm while under pressure.

They should enjoy being in charge, taking a methodical approach to their work, and negotiating with people.

Educational Requirements

(section revised AUGUST 2005)

Accommodation managers should be familiar with all areas of their establishment's operations. In particular, they need sound financial management skills, and a working knowledge of hospitality law and safety standards. Other required qualifications vary depending upon the type of accommodation. Managers of smaller commercial establishments such as motels, trailer parks and campgrounds may be entrepreneurs who have some hospitality-related work experience. Managers of specialized camps such as those for handicapped people may be required to have related post-secondary education.

The best background for hotel and motel managers is a combination of experience and education in hospitality management. It is still possible to work up from the bottom in hotel management, if on-the-job training is supplemented with further education. Some large hotels sponsor their own on-the-job management training programs. However, most employers look for job applicants who already have related post-secondary education such as **a business degree or a two year diploma in hospitality management**.

In Alberta, the following post-secondary institutions offer programs that are directly related to hotel management:

- The **Northern Alberta Institute of Technology** in Edmonton offers a one year certificate and a two year Hospitality Management diploma program. The minimum education requirement for both programs is Grade 11 including English and math.
- **Red Deer College** offers a two year Hospitality and Tourism diploma program with specializations in accounting and finance management, food and beverage management, and rooms and marketing management. The entrance requirement is a high school diploma or equivalent.
- **Robertson College** offers a 40-week International Hospitality and Hotel Management program. The entrance requirement is a high school diploma with a Grade 12 English.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Hotel and Restaurant Management diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, and Pure Math 30 or Applied Math 30 or Math 33.
- **Training Inc.**, a private vocational school in Lethbridge, offers a 12-week Hotel and Restaurant Operations program. Applicants must contact the school for entrance requirements.
- **Trend College**, a private vocational school in Edmonton, offers a 32-week Hotel and Tourism Management Studies program and a 50-week International Hotel and Tourism Management Studies program. Applicants must be at least 19 years of age, attend a personal interview and have the approval of the program co-ordinator, and have a high school diploma with English 30 or 33 (or equivalent) or be mature students who have specific course requirements.
- The **University of Calgary** offers a Bachelor of Hotel and Resort Management degree program that may also be taken as a co-op program. Applicants must be admitted to an approved two year diploma program such as the Hotel and Restaurant Management program at SAIT (see above) and achieve a minimum grade point average of 3.0/4 in the diploma program before they are admitted to the BHRM program. The University of Calgary also offers four year and five year co-op Bachelor of Commerce degree programs in Tourism and Hospitality Management. The entrance requirement for the B.Comm. program is a high school diploma with an average of at least 70 per cent in English 30, Math 30 or Pure Math 30, and three other appropriate subjects.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose will be accepted for credit at the institution to which they wish to transfer.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The **Alberta Tourism Education Council (ATEC)** offers one-day staff training seminars and two-day management seminars in service excellence which may be of benefit to accommodation managers.

Contact the **Alberta Hotel and Lodging Association** for information on a home/self study Certified Hotel Administrators certificate program offered by the **Educational Institute of the American Hotel and Lodging Association**, or contact the Educational Institute directly.

Employment and Advancement

(section revised JANUARY 2006)

Unless they already have considerable work experience in the field, new graduates of hospitality education programs usually start in junior positions such as hotel desk clerk.

Years of experience and in-house training are generally required to advance to hotel manager. A typical advancement path in a large hotel might be desk clerk, front office manager, rooms division manager, executive assistant manager and, finally, general manager. However, someone promoted to general manager from the rooms division would require food and beverage experience or they would require a knowledgeable food and beverage manager to assist them. Managers employed by chain hotels or motels may be transferred from one location to another as they are promoted.

In Alberta, most people employed as accommodation service managers work in the following industries:

- **Accommodation and Food Services**
- **Finance, Insurance and Real Estate.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,800 Albertans are employed in the Accommodation Service Managers occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for accommodation managers vary widely, depending on the size and nature of the establishment and the manager's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Accommodation Service Managers occupational group working part-time or full-time earn from **$16,700 to $134,000 a year.** The average salary was **$39,500 a year.**

Accountant

Produced NOVEMBER 2005

Accountants provide financial reporting and consulting services for organizations and individuals.

NOC Number(s): 1111.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I D**

Duties

Accountants work in business and industrial organizations, educational institutions, government and private firms that offer accounting services to the public. Duties vary from one position to another but, in general, accountants:

- design and administer accounting and information systems that include records of assets, liabilities and business transactions
- prepare budgets, tax returns and financial statements
- analyze financial information to assist in planning financial management policies, business strategies and the control and use of business assets
- provide personal and corporate income tax and estate planning services
- provide internal and external auditing services (for more information, see the Internal Auditor occupational profile)
- make recommendations regarding solutions to business and financial problems
- provide support in litigation matters
- serve as bankruptcy trustees and business valuators.

Accountants may have one of three professional designations:

- Certified General Accountant (CGA)
- Certified Management Accountant (CMA)
- Chartered Accountant (CA)

Working Conditions

Accountants usually work in an office setting. Their hours of work vary depending on the organization and level of responsibility but overtime is often required at company budgeting time, month end or in late winter and early spring (when public accountants are busy with year end corporate work and personal income tax returns). Depending on the position, some travel may be required.

Personal Characteristics

Accountants need the following characteristics:

- good oral and written communication skills
- critical thinking, logical analysis and problem solving skills
- the ability to work alone and as part of a team
- high ethical standards.

They should enjoy:

- having clear rules and organized methods to guide their activities
- developing innovative solutions to problems
- directing the activities of others.

Educational Requirements

(section revised DECEMBER 2005)

Training to become an accountant involves a combination of related post-secondary education and practical experience. Specific requirements vary depending on the professional designation.

To be certified by the **Institute of Chartered Accountants of Alberta** (ICCA), Chartered Accountants must:

- have a university degree or an equivalent combination of education and experience
- be employed with a CA firm approved to train students
- enrol in and complete the Chartered Accountants School of Business (CASB) program which includes online facilitated learning modules and group interactive learning meetings with facilitators.

Overall, after allowing for study leaves, two to three years are generally required to complete the ICAA program. The final national exam is generally completed before experience requirements.

To be certified by the **Society of Management Accountants of Alberta**, Certified Management Accountants must:

- have a university degree with 18 prerequisite syllabus topics
- pass the national CMA entrance exam
- complete the two year Strategic Leadership Program while employed full time in a qualifying accounting-related management position.

To be certified by the **Certified General Accountants' Association of Alberta**, Certified General Accountants must:

- have a bachelor's degree. CGA has agreements with post-secondary institutions that allow students to concurrrently study for the CGA designation as well as earn a bachelor's degree.
- complete 18 courses. Individuals who have taken equivalent post-secondary education courses may be granted exemptions up to a maximum of 14 transfer credits. Courses may be taken prior to obtaining employment in the accounting field but the program is designed for people who are working full-time.
- a minimum of twenty four months of full-time practical experience in finance and accounting.

Prospective students are strongly advised to check specific requirements and course suitability with the appropriate professional association, institute or society before enroling in post-secondary program.

In Alberta, the following post-secondary institutions offer degree programs in accounting.

- **Athabasca University** offers a four year Bachelor of Commerce degree program with a major in accounting. Anyone 16 years of age or older may apply for this distance education program.
- **Grande Prairie Regional College** offers a Bachelor of Commerce program in conjunction with Athabasca University.
- **Grant MacEwan College** in Edmonton offers a Bachelor of Applied Business Administration - Accounting degree program. Applicants for this two year program must have an Alberta business administration diploma in accounting (or equivalent) including specified courses with a minimum grade point average (GPA) of 2.3 on a 4.0 scale .
- **Lakeland College** in Vermilion offers a Bachelor of Applied Financial Services degree program. Applicants for this two year program must have a recognized two year diploma in business administration.
- **Mount Royal College** in Calgary offers a four year Bachelor of Applied Accounting degree program. The entrance requirement is a high school diploma with a 60 per cent average in English Language Arts 30-1 (or English 30), Pure Math 30 and three other appropriate Grade 12 subjects.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a Bachelor of Applied Business Administration - Accounting degree program that includes two directed field study semesters in industry. Applicants for this four semester program must have a two year business diploma from an accredited institution with specified coursework and a minimum GPA of 2.3.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Bachelor of Applied Business Administration degree program. Applicants must have a two year business administration or accelerated accounting diploma, or equivalent, with specified coursework and a minimum GPA of 2.3.
- The **University of Alberta** in Edmonton offers four year and five year co-op Bachelor of Commerce degree programs with a specialization in accounting. Applicants must have completed one pre-professional year in a Bachelor of Arts or Bachelor of Science program. In general, the entrance requirement for these programs is a competitive average in English Language Arts 30-1 (or English 30) and four other appropriate 30 level subjects.
- The **University of Calgary** offers a four year Bachelor of Commerce degree and five year co-op degree programs with specializations in accounting. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a language 30 other than English, one five credit Grade 12 subject.

- The **University of Lethbridge** offers a four year Bachelor of Management degree in accounting and five year combined degree programs. The entrance requirement is an average of 65 per cent in English Language Arts 30-1 (or English 30), three other approved 30 level subjects and a fifth approved Grade 12 subject, or an approved business administration/management diploma (for post-diploma admission).

CGA students can earn an Honours Bachelor of Commerce degree by distance education through Laurentian University.

The following post-secondary institutions offer two year Accounting or Business Administration diploma programs:

- **Athabasca University**
- **Bow Valley College** in Calgary
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **Keyano College** in Fort McMurray
- **Lakeland College** in Lloydminster and Vermilion
- **Lethbridge Community College**
- **Medicine Hat College** in Medicine Hat and Brooks
- **Mount Royal College** in Calgary
- **NAIT** in Edmonton and Fairview
- **Portage College** in Lac La Biche
- **Red Deer College**
- **SAIT** in Calgary

Admission requirements for these programs vary but generally include a high school diploma or equivalent with a minimum average in specified Grade 12 courses such as English Language Arts 30-1 or 30-2, and Pure or Applied Math 30.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Accountants may offer services on a fee-for-service basis or be employed on a salaried basis. They often work for:

- businesses
- governments
- management consultant practices
- corporate and personal tax preparation offices
- banks
- manufacturing companies
- stock exchanges
- credit offices
- public accounting practices
- educational institutions.

Experienced individuals who have professional accounting designations may advance to management positions or teach at the post-secondary level. Those in public accounting firms can move through the ranks of senior staff to become managers and partners. In industry, they can become:

- controllers
- treasurers
- chief financial officers
- senior executives.

In government, accountants may be employed as:

- budget officers
- internal auditors
- accounting managers
- information systems managers
- senior managers/executives.

Accountants are part of the larger National Occupational Classification 1111: Financial Auditors and Accountants. In

Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Finance, Insurance and Real Estate**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 26,400 Albertans are employed in the Financial Auditors and Accountants occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 390 to 660 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since accountants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for accountants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Accountants occupational group working part-time or full-time earned from **$14,000 to $194,200 a year.** The average salary was **$50,600 a year.** Accountants who have professional designations generally earn significantly more.

Accounting Technician

Produced OCTOBER 2005

Accounting technicians maintain systematic records of business transactions and verify and record those transactions. They use computers to calculate, prepare and process invoices, accounts payable and receivable, budget documents and other routine financial records.

NOC Number(s): 1231
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D i**

Duties

In small organizations, accounting technicians may:

- perform computer data entry and analysis functions
- prepare, type and mail monthly customer statements
- take telephone orders
- make up cheques
- make bank deposits and reconcile records of bank transactions
- assist with accounts receivable and accounts payable records, ledgers and journals
- assist with payroll calculations
- perform other clerical duties.

In large organizations, these duties are often divided among several employees called payroll clerks or cost clerks, for example. In general, they:

- use various computer applications
- record daily transactions
- total accounts by machine
- compute charges
- prepare invoices and reports.

To perform these duties, accounting technicians need an understanding of business documents such as receipts, till tapes, purchase orders, credit slips, sales slips, banking statements, financial statements and invoices.

Working Conditions

Accounting technicians usually work regular weekday hours in a comfortable office environment. Overtime may be required during peak business periods and standard hours may be different in the service industry.

Personal Characteristics

Accounting technicians must be able to:

- communicate effectively in person and on paper
- work with numbers quickly and accurately
- concentrate for extended periods of time and pay close attention to detail but also switch back and forth between tasks
- follow verbal and written instructions
- analyze data
- keep employer information confidential
- work independently on routine tasks.

They should enjoy having clear rules and organized methods for their work, balancing financial records and business transactions, and operating computerized systems and office equipment.

Educational Requirements

(section revised DECEMBER 2005)

The specific educational requirements for accounting and bookkeeping positions vary greatly from one employer to another depending on the scope and responsibility of the position. Most companies use electronic bookkeeping operations and require their employees to have related training or experience. Up to two years of on-the-job training or a related post-secondary certificate or diploma may be required. Employers may prefer to hire job candidates who are working toward a professional accounting designation (see the Accountant occupational profile).

High school courses in the following subject areas are valuable when seeking employment in this field:

- English
- accounting procedures
- law (especially contract law and statutes)
- basic economics
- business mathematics
- office procedures and business machine operation
- computer applications including word processing, spreadsheet and accounting software.

Most employers prefer to hire job candidates who have taken related courses and programs from colleges, technical institutes or private vocational schools. In Alberta, a number of institutions offer accounting courses and programs:

- **Academy of Learning** in Airdrie, Calgary, Edmonton, High River, Lethbridge, Medicine Hat and Red Deer
- **Alberta Career Computer Center Inc.** in Edmonton
- **Athabasca University**
- **Bow Valley College** in Calgary
- **CDI College of Business, Technology and Healthcare** in Calgary and Edmonton
- **Campbell College Ltd.** in Edmonton
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **HCC Choice College** in Spruce Grove
- **Keyano College** in Fort McMurray
- **Lakeland College** in Lloydminster and Vermilion
- **Lethbridge Community College**
- **Mann Career Training Ltd.** in Spruce View
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **NorQuest College** in Edmonton
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton and Fairview
- **Portage College** in Lac La Biche
- **Red Deer College**
- **Reeves College** in Lloydminster
- **Slate Training Centre** in Edmonton
- **Southern Alberta Institute of Technology (SAIT)** Continuing Education Division in Calgary
- **University of Alberta** Faculty of Extension in Edmonton
- **University of Calgary** Faculty of Continuing Education
- **University of Lethbridge.**

Prospective students should investigate the suitability and reputation of training programs with employers before enrolling in a program. Courses and programs vary considerably in content, length, admission requirements and cost. In general, a high school diploma or mature student status is required for admission. However, the entrance requirements for some programs include specific achievement and course requirements (e.g. at least 60 per cent in English Language Arts 30-1 or English 30 and Pure Math 30 or Math 30, or 65 per cent in ELA 30-2 or English 33 and Applied Math 30 or Math 33).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Accounting technicians are employed in organizations ranging from retail businesses and manufacturing firms to social service agencies that provide health, education or other social services. Some positions are part-time.

Advancement opportunities generally depend on the accounting technician's willingness to take further education. Some accounting technicians move into related data management positions.

Accounting technicians are part of the larger National Occupational Classification 1231: Bookkeepers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Construction**
- **Oil and Gas Extraction**
- **Retail Trade**
- **Transportation and Warehousing**
- **Repair, Maintenance, Personal and Other Services**
- **Finance, Insurance and Real Estate.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 19,500 Albertans are employed in the Bookkeepers occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 390 to 590 new positions will be created each year in addition to job openings created by employment turnover. (**Note:** Since accounting technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for accounting technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Inexperienced accounting technicians may start at salaries not much higher than minimum wage. Starting salaries are higher for graduates of related post-secondary programs.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Bookkeepers occupational group working part-time or full-time earned from **$10,800 to $91,300 a year.** The average salary was **$32,400 a year.**

© Government of Alberta, Human Resources and Employment

Actor

Produced MAY 2003

Actors perform roles in dramatic productions on stage, television, radio and in the movies. They also perform in television and radio commercials, and work in media narration and voice-overs.

NOC Number(s): 5135.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I d**

Duties

Actors' duties vary depending on the requirements of the roles they play but, in general, they:

- spend a considerable amount of time building a network of contacts (agents, casting directors, producers) in the entertainment industry
- audition for roles
- spend hours researching, studying, rehearsing and learning lines and cues
- work closely with directors, other actors and, sometimes, playwrights to find the interpretation they think is most suited to the role
- learn special skills such as singing, dancing, gymastics, juggling or stage combat, as required
- work together with other actors in ensembles.

Actors may be invited by directors or playwrights to "workshop" new plays and collectives (a collective is an improvisational technique for developing scripts). In this script development process, actors may be asked to read a character's lines or stage all or part of the play to help directors or playwrights see the characters brought to life.

Actors spend considerable time researching their characters and learning scripts. Rehearsals vary in length depending on the medium in which the actor is working. Weekly television shows and commercials are usually filmed in a short period of time. Mini-series, specials and movies take much longer to film. Generally, small segments are filmed at one time and film editors later put scenes in order.

Stage actors have longer rehearsal periods than performers on radio and television. They must be ready for opening night and be able to duplicate their performances consistently throughout the length of the play's run. Plays or musicals often run for weeks or even years, although the casts may change.

Working Conditions

Actors often work long, irregular hours. Rehearsals may be held on holidays and weekends. Most actors in stage productions perform six evenings and one or two matinees on weekends. Their normal day off is Monday.

It is common for actors to travel to other cities to perform in plays or work on films, which may require the actor to be away from home for a few weeks or several months. Working on location may involve working in just about any type of environment imaginable (e.g. noisy factories, underground, severe rain or snow storms).

Personal Characteristics

Actors need the following characteristics:

- imagination and creativity
- a talent for creating roles
- the ability to persevere when looking for work
- patience
- stamina and vitality
- self-discipline and a commitment to continually develop and refine their skills
- the ability to learn quickly and adapt to directors' interpretations

- the ability to work with others in an ensemble

They should enjoy having variety and creativity in their work, as well as the recognition and freedom their work brings.

Educational Requirements

(section revised SEPTEMBER 2005)

To succeed in this highly competitive field, actors must be versatile. Acting, singing, movement and dance skills increase an actor's potential for success.

Most actors have **formal training in performing arts.** In Alberta, the following post-secondary institutions offer related programs:

- **Grant MacEwan College** in Edmonton offers a two year Theatre Arts diploma program. The entrance requirement is a high school diploma or equivalent.
- **Keyano College** in Fort McMurray offers a two year Drama diploma program. The entrance requirement is a high school diploma with English 30, 30-1, 30-2 or 33 or equivalent and an audition or interview.
- **Mount Royal College** in Calgary offers a two year Theatre Arts diploma program. The entrance requirement is a high school diploma or equivalent.
- **Red Deer College** offers a two year Theatre Studies diploma program with a specialization in acting. The entrance requirement for the acting specialization is a high school diploma with English 30 or equivalent and an audition. Red Deer College also offers a one year post-diploma Motion Picture Arts, Advanced Certificate program and a Bachelor of Applied Motion Picture Arts degree program with a specialization in acting. The entrance requirements for the advanced certificate and bachelor's degree programs are two years of a post-secondary Theatre Studies Program, or equivalent, with a grade point average of at least 2.0/4 and an audition.
- **Rocky Mountain College** in Calgary offers a two year Theatre Arts diploma program. The entrance requirement is four matriculation level courses including English with a minimum average of 65 per cent in the four courses.
- The **University of Alberta** in Edmonton offers Bachelor of Fine Arts (BFA) and BA degree programs in Drama. The entrance requirement for the BFA program is successful completion of the first year of an approved BA or equivalent program with a junior-level English course (courses in the Humanities, Social Sciences and Fine Arts are recommended). This year is later credited toward the BFA degree program. The entrance requirement for the BA program is a high school diploma or equivalent with an average of at least 65 per cent in English 30, a 30-level language other than English or Math 30 or Pure Math 30, and three other approved Grade 12 subjects (Social Studies 30 is recommended). The University of Alberta in Camrose offers a bachelor degree programs in drama. The University of Alberta also offers a four year BFA degree program in Technical Theatre.
- The **University of Calgary** offers a four year BFA degree program in Drama. The entrance requirement is a high school diploma or equivalent with an average of at least 72 per cent in English 30 and four of the following subjects: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a 30-level language other than English, Drama 30, one five credit Grade 12 subject.
- The **University of Lethbridge** offers BA, BFA and combination degree programs in Dramatic Arts with a specialization in performance. The entrance requirement is an average of at least 65 per cent in English 30 or English Language Arts 30-1 and three other appropriate 30-level subjects, plus a fifth Grade 12 subject. Graduates of approved two year diploma programs may be eligible to enter the third year of the BFA program.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The **Banff Centre for the Arts** offers workshops for professional performers both at the Apprentice and the Professional levels. A resume and a statement of learning objectives are required.

Actors also need experience performing. This is often acquired through appearing in amateur theatre and school productions or working with community theatre groups.

Since most actors are self-employed independent contractors, they are often involved in the negotiation of individual contracts and must operate as a small business. Many actors benefit from skills training in negotiation and business management.

Throughout their careers, professional actors continue to take speech and voice training, movement, stage combat or other specialized courses or lessons to maintain and refine their skills.

Employment and Advancement

(section revised JANUARY 2006)

Getting started as an actor requires spending time preparing monologues for general auditions, reading for parts and getting to know people (and thereby becoming known) in the industry. Established actors, especially in television and film, often have agents who represent them and arrange for auditions.

Stage actors look for work by auditioning for the artistic directors of professional theatre companies. Once a year, they hold open auditions to see as many new actors as possible. Larger theatres such as the Citadel Theatre in Edmonton and Theatre Calgary send directors across Canada to audition actors. Professional theatres in Canada are permitted to hire a certain percentage of non-professional actors. This is how many new performers are hired for their first part. Being in the right place at the right time and having the right look also play a role in getting a first part.

Auditioning for film and television usually involves meeting with producers or directors who may already have seen the actor's resume and photograph. Sometimes actors are called back two or three times to audition before a casting decision is made. Most film and television actors have agents to arrange auditions and negotiate contracts.

Professional actors in Canada usually belong to the **Canadian Actors' Equity Association** (for live performance) or the **Alliance of Cinema, Television and Radio Artists**. These unions set minimum fees and working standards. Actors must gain some experience performing in equity productions before they are eligible to join. It is possible to work as a professional actor without joining either union; however, most actors do belong to at least one.

Actors are part of the larger National Occupational Classification 5135: Actors and Comedians. In Alberta, over 75 per cent of people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 900 Albertans are employed in the Actors and Comedians occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since actors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for actors.)

Salary

An actor's life is rarely financially rewarding. Minimum wages are set by the unions and maximum wages are negotiated by the actor or the agent. However, many actors accept non-equity work or work in co-operative productions. Some actors generate their own work by producing fringe festival productions.

The average ACTRA rate for speaking roles in film or television productions ranges from **$350 to $525 per eight hour day**, depending on the role (**2002 figures**). These figures do not include compensation for use of the production which these performers are entitled to under the ACTRA contract. In terms of the ratio for time worked versus total earnings, commercial work generates the highest earning potential.

Many actors must supplement their income between performances by taking part-time jobs, often jobs unrelated to acting. Some actors also work as directors, acting and voice coaches, or college drama teachers.

Actuary

Produced NOVEMBER 2005

Actuaries apply their knowledge of mathematics (particularly probability, statistics and risk theory) to financial problems involving future uncertainty. These uncertainties may be associated with life or property/casualty insurance, annuities, pension or other employee benefit plans.

NOC Number(s): 2161.3
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M D**

Duties

Much of life is uncertain. It involves risk such as risk of sickness, disability, unemployment, property damage/loss or dying unexpectedly. Although these risks are unpredictable for any one individual, actuaries can analyze statistics and calculate the probability of uncertain events occurring in the future among members of defined groups.

In **insurance companies**, actuaries are involved in almost every aspect of the business including:

- developing new products and services
- setting premiums
- managing investments
- marketing
- management and administration.

In other settings, actuaries may provide a wide variety of services. For example, they may:

- help employers, labour unions and trustees design and administer private pension plans and other employee benefit plans
- specialize in the probabilities of loss arising from events such as sickness, disability and casualties caused by fire, theft, windstorm or automobile accident
- appear as expert witnesses in court proceedings on issues such as lost future earnings
- help investment fund managers maximize their returns
- improve medical insurance plans by showing the long term savings possible through alternative treatments or the introduction of new drugs
- advise companies on how to set up trust funds to cover anticipated future expenses.

Working Conditions

Although actuaries work in offices with standard office hours, longer hours are sometimes required. Some travel may be required for business meetings and conferences.

Personal Characteristics

Actuaries need the following characteristics:

- an interest in mathematics
- practical business sense
- the creativity required to develop innovative solutions to problems
- effective communication skills
- the ability to work with a wide variety of people.

They should enjoy synthesizing information and solving problems, taking a methodical approach to their work, making decisions and consulting with people.

Educational Requirements

Actuaries need **related education and experience** and must pass a series of qualifying exams. A solid background in high school math, particularly algebra, calculus and finite math, is important.

While it is not a formal requirement, most actuaries have a university degree and have taken courses in many or all of the following areas:

- math
- statistics
- economics
- commerce
- accounting
- business administration
- computer science
- marketing.

Some Canadian universities offer courses in actuarial science that help students prepare for professional exams. In Alberta, the University of Alberta in Edmonton and the University of Calgary offer actuarial science courses.

- The **University of Alberta** in Edmonton offers a four year B.Sc. degree program in actuarial science with a business minor, and a B.Sc. degree program in mathematical finance. Students may apply for admission to the actuarial science program after completing at least one year of university studies. The entrance requirement for admission to the Faculty of Science is a competitive average in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, Math 31, a 30 level science (Physics 30, Chemistry 30 or Biology 30) and one other appropriate 30 level subject.
- The **University of Calgary** offers a Bachelor of Science (B.Sc.) degree program with a major in actuarial science. The program normally takes four years to complete but is also available as a five year co-operative education program in which classroom study is integrated with work experience. The entrance requirement is a high school diploma with an average of at least 70 per cent in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, and three other 30 level subjects selected from an approved list. The University of Calgary also offers a five year combined Bachelor of Commerce (B.Com.) and B.Sc. degree program in actuarial science.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the insitution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Professional exams leading to the designation Fellow of the Society of Actuaries are jointly sponsored by the Canadian Institute of Actuaries and the Society of Actuaries. Exams leading to the designation Fellow of the Casualty Actuarial Society are offered by the Casualty Actuarial Society in consultation with the Canadian Institute of Actuaries. One of these designations is required for the designation Fellow, Canadian Institute of Actuaries. There are two levels of exams. Most candidates complete the first level of exams within three to five years of graduating from university. It generally takes five to ten years to complete all of the exams to attain Fellowship.

Students are encouraged to complete economics, corporate finance and applied statistics course requirements and write some first level exams while still at university. This enables them to find employment in the actuarial field. Although most employers give actuarial students some time to study during working hours, students generally have to study on their own time as well.

Employment and Advancement

(section revised JANUARY 2006)

Actuaries may be employed by or work on a contract basis for:

- consulting firms
- life insurance companies
- property/casualty insurance companies
- reinsurance companies

- universities
- government departments
- large corporations.

There is an increasing demand for actuaries in non-traditional roles such as compensation consulting, workers' compensation, health care management, financial planning, investments, environmental liability, enterprise risk management and information systems.

Experienced actuaries may advance to senior management positions in insurance companies.

Actuaries are part of the larger National Occupational Classification 2161: Mathematicians, Statisticians and Actuaries. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Educational Services**
- **Food and Beverage Products Manufacturing**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 450 Albertans are employed in the Mathematicians, Statisticians and Actuaries occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since actuaries form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for actuaries.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries vary depending on the actuary's qualifications, location and the type of employer. According to a **2000** salary survey conducted by the **Canadian Institute of Actuaries**, salaries for:

- students who had successfully completed a number of qualifying exams ranged from **$48,000 to $55,000 a year**
- newly-qualified Fellows ranged from **$65,000 to $89,000 a year**
- Fellows with ten or more years of experience ranged from **$104,000 to over $168,000 a year**.

In 2003, Albertans in the Mathematicians, Statisticians and Actuaries occupational group earned an average salary of **$58,800 a year** (2003 Alberta Wage and Salary Survey).

Acupuncturist

Produced MARCH 2005

Acupuncturists diagnose patients' diseases, physiological disorders and injuries according to traditional Chinese medical theories, and treat them by inserting acupuncture needles or by using other methods of stimulating different points on the body.

NOC Number(s): 3232.2
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I M**

Duties

Acupuncture, a healing art practiced in China for over two thousand years, has received attention and acceptance in Western cultures relatively recently. It is based on the premise that illness occurs when the flow of vital energy, Qi, is obstructed or out of balance. Stimulating certain points on the body can help correct this obstruction or imbalance and, consequently, relieve pain and restore health.

Acupuncturists use unique techniques and diagnostic methods to determine patterns of imbalance or disharmony. In a typical assessment session, an acupuncturist assesses a patient's vitality and general physical, mental and emotional condition by:

- examining the patient's tongue and general appearance
- listening to the patient's voice, breathing and abdominal sounds
- noting body odours
- checking pulses at several points on each wrist and other specific points
- asking questions about body functions such as digestion, sleep patterns and eating habits.

Through patients' physicians, acupuncturists also may arrange for additional tests, analyses and x-rays to assist in diagnosing problems.

Once they have made a diagnosis, acupuncturists determine what body points should be stimulated, how and for how long. Acupuncturists may also recommend herbal supplements, exercises or dietary changes.

Working Conditions

Acupuncturists work in offices and treatment clinics, and may spend a great deal of their time on their feet. For the convenience of their clients, they may work some evening or weekend hours.

Lifting up to 10 kilograms is routinely required. Occasionally, acupuncturists may be required to lift patients (e.g. from wheelchair to treatment table).

Personal Characteristics

Acupuncturists need the following characteristics:

- an ethical, responsible and compassionate attitude
- good communication skills
- maturity
- the ability to establish rapport with patients and gain their trust and confidence.

They should enjoy observing and interviewing people, performing tasks requiring precision (e.g. inserting acupuncture needles at precise points), and advising patients.

Educational Requirements

(section revised JULY 2005)

In general, applicants for registration as acupuncturists (see Other Requirements below) must satisfactorily complete an approved program of studies (or equivalent) and have practiced acupuncture for at least 500 hours within the previous two years.

In Alberta, the following institutions offer acupuncture training programs:

- the **Alberta College of Acupuncture and Traditional Chinese Medicine** in Calgary, offers a 108-week Acupuncture program. The entrance requirement is a high school diploma with 60 per cent or better in Grade 12 English, math and science. Applicants must be at least eighteen years of age, out of school for two years or have successfully completed one year of post-secondary education or equivalent training. An interview is required.
- the **Calgary College of Traditional Chinese Medicine and Acupuncture** in Calgary offers a 102-week Acupuncture program. The entrance requirement is a high school diploma with at least 60 per cent in a Grade 12 English, math and science or equivalent.
- the **Canadian Institute of Traditional Chinese Medicine** in Calgary offers a three year diploma program that includes theory, clinical observation and practice. The entrance requirement is two years of related post-secondary education or an equivalent combination of education and experience.
- **Grant MacEwan College** in Edmonton offers a three year diploma program. The entrance requirement is a high school diploma with English 30, Biology 30, Chemistry 30 and two years of post secondary education, preferably in health sciences.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Health Disciplines Act and Acupuncture Regulation, you must be registered by the Acupuncture Health Disciplines Committee to call yourself an Acupuncturist. Registered members provide services listed in the Regulation.

Employment and Advancement

(section revised JANUARY 2006)

Most acupuncturists work in private practice, alone or in partnership with other health care professionals such as family physicians or chiropractors. Advancement in this occupation generally takes the form of building a larger, more prosperous practice.

Acupuncturists are part of the larger National Occupational Classification 3232: Midwives and Practitioners of Natural Healing. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 500 Albertans are employed in the Midwives and Practitioners of Natural Healing occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since acupuncturists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for acupuncturists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Incomes in this occupation vary considerably, ranging up to and over **$120,000 a year (2005 estimate).**

Addictions Counsellor

Produced DECEMBER 2005

Addictions counsellors help individuals, families and communities identify and deal with addictions through treatment and prevention programs.

NOC Number(s): 4153
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S I d

Duties

In general, addictions counsellors:

- work with clients from diverse cultures and lifestyles who have eating disorders or are addicted to alcohol, drugs, gambling, sex or tobacco
- assess client strengths, problem areas, severity of dependence and readiness to change
- develop patient treatment plans that are based on research, clinical experience and client history
- provide information about addiction issues and about available services and programs and make appropriate referrals where necessary
- conduct information sessions and therapy groups as required
- counsel affected individuals and family members through all stages of recovery using appropriate intervention strategies and treatment approaches
- review, evaluate and document client progress
- provide aftercare and follow-up as appropriate
- develop public education, prevention and health promotion programs
- work with organizations, institutions and communities to develop, implement and evaluate health and wellness programs.

Working Conditions

Addictions counsellors may work in residential treatment centres, detox centres, group homes, over night shelters, out patient centres, schools or community based agencies. Depending on the agency, they may work standard weekday office hours or work shifts that include evenings and weekends. Some travel may be required.

This work can be both emotionally rewarding and emotionally draining.

Personal Characteristics

Addictions counsellors need the following personal characteristics:

- emotional maturity and a balanced, healthy lifestyle
- patience
- tolerance for beliefs and values that not their own
- excellent communication and presentation skills
- the ability to manage time effectively.

They should enjoy working with people, synthesizing information to find innovative solutions to problems, and helping others.

Educational Requirements

A **related university degree** is the **preferred** credential for addictions counsellors. Depending on the place of employment, a related two year post-secondary diploma plus related work experience or training also may be acceptable.

Post-secondary institutions throughout Alberta offer related degree programs. For more information, see the Psychologist and Social Worker occupational profiles. The following institutions offer addictions counselling programs:

- **Medicine Hat College** offers a two-and-a-half-year Addictions Studies diploma program that includes a practicum. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30, Biology 30 or Chemistry 30, and three other approved 30 level subjects (Pure Math 30 or Math 30 recommended). Graduates may apply for admission to a related post-diploma degree program.
- **Mount Royal College** in Calgary offers a 120 hour, part-time Addiction Studies program through the Faculty of Continuing Education and Extension. Supported by **AADAC** (Alberta Alcohol and Drug Abuse Commission), this program gives human service practitioners the opportunity to learn about addictions.
- The **University of Lethbridge** offers a four year program leading to a Bachelor of Health Sciences (B.H.Sc.) degree. The entrance requirement is a high school diploma with a 65 per cent average in English Language Arts 30-1 or English 30, Biology 30 or Chemistry 30, and three other approved 30 level subjects (Pure Math 30 or Math 30 recommended). An approved diploma in Addictions Counselling is required for post-diploma admission.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Addictions counsellors are employed by agencies that offer prevention, health promotion, early intervention or treatment programs. They may work with dependent clients or in addiction programs, women's shelters, the criminal justice system, medical/health services, schools or community programs.

Advancement opportunities depend on the counsellor's qualifications and the size and nature of the organization.

Addictions counsellors are part of the larger National Occupational Classification 4153: Family, Marriage and Other Related Counsellors. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,800 Albertans are employed in the Family, Marriage and Other Related Counsellors occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since addictions counsellors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for addictions counsellors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Family, Marriage and Other Related Counsellors occupational group working part-time or full-time earned from **$16,600 to $105,300 a year.** The average salary was **$30,700 a year.**

Administrative Assistant

Produced OCTOBER 2005

Administrative assistants perform administrative duties ranging from general office tasks to acting as special assistants in particular departments.

NOC Number(s): 1411
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i**

Duties

Technology is constantly changing and so are administrative assistants' duties. However, in general, administrative assistants:

- use word processing, spreadsheet, database or presentation software to prepare invoices, reports, memos, letters, financial statements and other documents
- answer telephones, schedule meetings, manage executives' calendars, greet visitors, meet with clients, and handle business and administrative details
- prepare meeting agendas, attend meetings, and record and transcribe minutes
- open, sort and distribute correspondence (including faxes and electronic mail) and respond to routine inquiries
- draft correspondence and reports
- make travel arrangements, prepare expense reports, order and maintain office supplies
- develop or maintain a records management system including classifying and coding electronic and hardcopy files
- train staff members in computer applications and troubleshoot hardware and software problems
- research information on the Internet, prepare Intranet documents and assist in the maintenance of company websites
- handle basic bookkeeping duties such as accounts payable and receivable and the reconciliation of accounts
- operate office equipment such as fax machines, photocopiers, voice mail messaging systems and computer scanning equipment
- transcribe material from handwritten notes or electronic dictation
- edit or format documents for executives
- manage events (for more information, see the Special Event Co-ordinator profile).

Working Conditions

Administrative assistants work in office environments. They usually work standard office hours but overtime may be required to meet deadlines.

Personal Characteristics

Administrative assistants need the following characteristics:

- good oral and written communication skills
- good interpersonal skills
- good organizational and time management skills
- the ability to work independently or as part of a team.

They should enjoy working with people, using computer applications, and compiling and organizing information.

Educational Requirements

(section revised FEBRUARY 2006)

Most employers, particularly in specialized fields, require administrative assistants to have related post-secondary education and computer skills.

In Alberta, a number of colleges, technical institutes and private vocational schools offer post-secondary programs related to office administration:

- **3A Academy & Consulting Ltd.** in Lloydminster
- **Academy of Learning** in Airdrie, Calgary, Edmonton, High River, Lethbridge, Medicine Hat and Red Deer
- **Alberta Career Computer Centre** in Edmonton
- **Blue Quills First Nations College** in St. Paul
- **Bow Valley College** in Calgary
- **Campbell College Ltd.** in Edmonton
- **Careers in Transition** in Edmonton
- The **CDI College of Business, Technology and Healthcare** in Calgary and Edmonton
- **Columbia College** in Calgary
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **HCC Choice College** in Spruce Grove
- **Keyano College** in Fort McMurray
- **Lakeland College** in Vermilion
- **Lethbridge Community College**
- **Mayfair Business College** in Grande Prairie
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **NorQuest College** in Edmonton
- **Northern Alberta Institute of Technology** in Edmonton, Peace River and St. Albert
- **Northern Lakes College** in Athabasca, Grouard, High Prairie, Slave Lake, Valleyview and Wabasca
- **Olds College**
- **Portage College** in Lac La Biche
- **Prestwick College** in Calgary
- **Red Deer College**
- **Reeves College** in Calgary, Edmonton and Lloydminster
- **Slate Training Centre** in Edmonton
- **Southern Alberta Institute of Technology (SAIT)** in Calgary
- **Sprott-Shaw Community College** in Calgary and Edmonton
- **Training Inc.** in Lethbridge
- **Trend College** in Edmonton.

Prospective students should investigate the suitability and reputation of training programs with employers before enrolling in a program. Courses and programs vary considerably in content, length, admission requirements and cost. In general, a high school diploma or mature student status is required for admission but entrance requirements for some programs include specific courses such as English Language Arts 30-1 or 30-2 and Grade 11 math.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Administrative assistants may be employed in any industry. Some are self-employed and work from home.

Experienced administrative assistants may advance from routine clerical tasks to a skilled specialty or to supervision of other office assistants.

Administrative assistants are part of the larger National Occupational Classification 1411: General Office Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**

- **Public Administration**
- **Professional and Technical Services**
- **Finance, Insurance and Real Estate**
- **Management, Administrative and Other Support Services**
- **Educational Services**
- **Retail Trade**
- **Construction**
- **Transportation and Warehousing**
- **Wholesale Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,000 Albertans are employed in the General Office Clerks occupational group which is expected to grow 0.2 to 1.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 200 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since administrative assistants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for administrative assistants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for administrative assistants vary depending on the responsibilities of the position and the qualifications of the worker.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the General Office Clerks occupational group working part-time or full-time earned from **$11,300 to $138,500 a year.** The average salary was **$34,400 a year.**

Advertising Account Executive

Produced FEBRUARY 2004

Advertising account executives co-ordinate the day to day activities involved in planning and implementing print and electronic media advertising campaigns.

NOC Number(s): 1122.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I S D**

Duties

Advertising account executives are the primary link between advertising agencies and their clients. Their duties and responsibilities vary depending on the agency and the type of account but, in general, they:

- familiarize themselves with client products, services, target markets, goals, competitors and preferred media
- consult with clients to establish advertising campaign objectives and budgets, and build strong relationships with clients
- communicate client objectives to production and creative personnel such as art directors, copywriters and researchers
- assist in the development of campaign strategies
- submit campaign ideas and cost estimates to clients for approval
- act as a liaison for the client, production team, creative group and agency business personnel
- track progess, keep everyone involved informed and perform the administrative tasks required to ensure that campaigns are successfully completed profitably.

Advertising account executives may also be expected to bring in new business for the agency.

Working Conditions

Advertising account executives usually work in office environments. Some travel may be required.

Dealing with difficult clients and working long, irregular hours to meet deadlines can be stressful.

Personal Characteristics

Advertising account exectuives need the following characteristics:

- energy, self-confidence, initiative and competitive spirit
- excellent oral and written communication skills, including the ability to make presentations under pressure
- the interpersonal skills required to build and maintain professional relationships with clients and coworkers
- imagination, creativity and flexibility
- an open-minded attitude
- exceptional organizational skills
- the ability to pay close attention to details
- integrity.

They should enjoy consulting with people and analysing client needs, and developing, implementing and evaluating advertising campaigns.

Educational Requirements

Advertising account executives are marketing consultants and communications experts. They need **computer skills and related experience as well as related post-secondary education** (e.g. a two year diploma in advertising or marketing, or a bachelor's degree in commerce/management/business administration, psychology or sociology).

Courses in marketing, market research, economics, statistics, accounting, the psychology of persuasion/perception and communication arts are recommended. Some employers require applicants for account executive positions to have a related bachelor's or master's degree (e.g. Master of Business Administration) or experience in a particular industry (e.g. retail, insurance, health care).

Continuing education programs are often offered on an as needed basis. For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Suitable business administration/commerce/management and liberal arts programs are offered by post-secondary institutions throughout Alberta. For information about marketing programs, see the Marketing Manager occupational profile.

Employment and Advancement

(section revised JANUARY 2006)

Advertising account executives are employed by advertising agencies and the advertising departments of large companies. Most agencies and head offices are located in large urban centres.

Account executives generally start their careers in junior positions and work their way up. Advancement usually takes the form of being assigned higher profile clients and bigger campaigns. In advertising agencies, successful account executives may advance to account manager/supervisor and account director positions.

Advertising account executives are part of the larger National Occupational Classification 1122: Professional Occupations in Business Services to Management. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**
- **Finance, Insurance and Real Estate**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,250 Albertans are employed in the Professional Occupations in Business Services to Management occupational group which is expected to grow 2.8 to 3.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 280 to 390 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since advertising account executives form only a small part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for advertising account executives.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Advertising account executives may be paid a salary, work on an hourly rate and/or receive commissions.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Professional Occupations in Business Services to Management occupational group working part-time or full-time earned from **$11,500 to $179,800 a year.** The average salary was **$66,500 a year.**

© Government of Alberta, Human Resources and Employment

Advertising Copywriter

Produced MAY 2005

Advertising copywriters write advertisements for print, outdoor and broadcast media, and write copy for Internet home pages and CD-ROM applications.

NOC Number(s): 5121.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M d**

Duties

Copywriters write advertisements to promote the sale of goods and services, and promote and maintain positive images of their client organizations.

- In **print media,** copywriters write advertisements for clients who buy advertising space in newspapers and magazines.
- In **outdoor media**, they write advertisements for clients who buy billboards, outdoor posters and bus boards.
- In **broadcast media**, copywriters write radio and television commercials and short announcements for customers who buy advertising time. They also may write scripts for corporate or professional videos.

In advertising agencies, copywriters may write for all of the above mediums. They may specialize in writing for local and regional companies, national corporations, government departments, retail outlets or not-for-profit organizations.

In addition to writing advertisements, promotional materials and merchandising materials, copywriters may write media releases, brochures, direct mail pieces or trade journal articles. These materials may appear in a variety of formats including Internet home pages. In general, however, advertising copywriters:

- consult with account executives or clients, or follow client instructions that specify the messages to be conveyed
- research the product or service they are writing about
- work in conjunction with others to develop effective ways of attracting the attention of the target audience and influencing consumer attitudes and buying habits (creative thinking is an important part of the job)
- sell their ideas to clients, supervisors and account executives
- take into account client needs and the requirements of the overall marketing plan for the product or service
- work closely with layout artists (graphic designers, commercial artists and photographers) to add visual impact
- edit and proofread ads for accuracy and for copy or photo co-ordination
- help with layout and production, sometimes assisting in the direction of television film shoots or radio commercials, or supervising photo sessions
- act as producers for TV shoots.

Most copywriters routinely work on several projects at the same time.

Working Conditions

Because advertising is an intensely competitive, fast-paced industry, copywriters must be able to deal with the pressure of having to work on several projects simultaneously and meet deadlines. Copywriters must manage their time and balance a need for quiet, creative thinking/writing time with the need to deal with many interruptions such as phone calls and meetings with clients and co-workers.

Copywriters usually keep regular office hours but meeting deadlines frequently involves working overtime.

Travel to "on location" photo shoots, radio and film productions is sometimes required.

Personal Characteristics

Copywriters need the following characteristics:

- excellent communication skills in person and in writing
- the ability to think creatively and generate an unending supply of fresh, exciting, new ideas
- an outgoing personality able to relate well to others (clients, co-workers, intended audiences) and sell ideas
- the ability to focus on their work in circumstances that are sometimes chaotic
- the ability to give and take constructive criticism
- time management and organizational skills (copywriters may have to generate five to 15 ads per day)
- the ability to work well under pressure
- an interest in advertising, sales and marketing, and in keeping up to date in their field.

They should enjoy synthesizing information and finding innovative solutions to problems, studying products and services, and persuading people.

Educational Requirements

The most important qualifications for advertising copywriters are:

- the ability to write in a variety of styles
- a solid grasp of the English language
- good research skills
- a willingness to edit their own work ruthlessly
- excellent word processing and proofreading skills.

Building a strong portfolio of written work is essential for finding employment in this field.

Most copywriters have some **post-secondary education related to communications, journalism, marketing or broadcasting.** Many have a Bachelor of Arts (BA) degree in English. Suitable post-secondary education programs are offered by post-secondary institutions located throughout Alberta. Continuing education programs are offered on an as needed basis.

In Alberta, the following post-secondary institutions offer programs with course content directly related to advertising:

- **Grant MacEwan College** offers a two year diploma program and a four year Bachelor of Applied Communication Studies in Professional Writing degree program. The entrance requirement is a high school diploma or equivalent with an average of at least 65 per cent in English Language Arts 30-1 (or English 30), a 30 level language other than English or Pure Math 30 (or Math 30 or equivalent), and three other courses chosen from specified lists of eligible courses.
- **Lethbridge Community College** offers a two year Communication Arts diploma program with a specialization in Advertising/Public Relations. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1 or 70 per cent in ELA 30-2 (or equivalent), and 60 per cent in Social Studies 30 (or equivalent). Applicants must write a 500 word composition.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Advertising copywriters are employed by:

- advertising agencies
- newspaper and magazine publishers
- radio and television stations
- governments
- large corporations
- private consulting firms.

Advertising agencies recommend that people who have not had previous training in advertising study ads currently in circulation critically and read books or other publications on the topic. Applicants for jobs should provide portfolios of their work and may be required to take a writing skills assessment.

Initially, a copywriter's position may be difficult to obtain. Experience writing for school or community publications, and sales experience are definite assets.

There are relatively few specialized advertising agencies in Alberta. Generally, copywriters start working with smaller print or broadcast media companies and progress to larger newspapers, radio or television stations. In larger stations and agencies, there may be opportunities to advance to copy chief or creative director positions.

With additional training, copywriters may move into areas such as broadcast sales, promotions or production; public relations; fund-raising or marketing. Or they may choose to move into a different area media or do freelance work.

Advertising copywriters are part of the larger National Occupational Classification 5121: Authors and Writers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,450 Albertans are employed in the Authors and Writers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since advertising copywriters form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for advertising copywriters.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Authors and Writers occupational group working part-time or full-time earned from **$15,300 to $85,400 a year.** The average salary was **$42,600 a year.**

Aerospace Engineer

Produced JUNE 2004

Aerospace engineers research, design, develop, test, manufacture and maintain aerospace vehicles and systems such as commercial and military aircraft, missiles, spacecraft and related aerospace equipment.

NOC Number(s): 2146
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Aerospace engineers may specialize in:

- flight testing or simulation
- aerodynamics
- structures and materials
- structural dynamics
- mass and weight analysis
- stress analysis
- propulsion systems
- systems analysis
- avionics systems
- navigation systems
- robotics
- project management
- maintenance
- component and system design
- qualification testing of components
- stability, control and performance of flight systems
- manufacturing: machining, forming and joining aerospace materials and composites
- particular products such as military aircraft, helicopters, surveillance systems, simulators, ground stations, satellites or rockets.

Some of the specializations within aerospace engineering are described below:

Aerospace engineers specializing in aerodynamics deal with the forces generated by motion through the air which affect aircraft performance. Working with design engineers and using computers and wind tunnels to simulate flight, they:

- study and develop appropriate designs for aircraft, rocket vehicles and spacecraft that also fly through the atmosphere (e.g. the shuttle on its re-entry)
- analyze and test the effects of airflow to obtain the information they need to design appropriate structures
- determine the aerodynamic loads used by structural engineers (see below).

Structural engineers determine if the aircraft or spacecraft will safely carry the loads it is designed to carry. Structural/stress analysis and testing is required to determine safety margins for aircraft, rockets and spacecraft.

Design engineers design and develop new aircraft, spacecraft and their components, or make improvements to the design of existing crafts. Design engineers:

- analyze and optimize the constraints associated with the aerodynamics, stability, structures, materials and propulsion systems of aircraft and spacecraft, and determine how these factors affect the craft
- conduct fretting fatigue analyses
- apply principles of concurrent engineering and design to ensure manufacturability and reduce impact on the environment
- use computer-aided design (CAD) applications to translate specific design specifications into drawings and

standards for performance.

Aerospace engineers specializing in **experimental testing** construct models and analyze prototypes to test the aerodynamics, stability, control, propulsion and structural performance of a proposed design. These aerospace engineers:

- make modifications to the design and study test results to determine the effects of such factors as weight distribution
- test the performance of aircraft, spacecraft or components by determining the operating conditions likely to exist and recording the actual conditions that did exist during testing.

Materials engineers are responsible for selecting the specific type of materials to be used in each section of the aircraft or spacecraft to ensure high strength-to-weight ratios and resistance to heat or cold. Materials engineers:

- decide which processes (e.g. heat-treating or plating) should be used to make materials usable without destroying their desired properties
- prepare specifications and procedures for the use of particular materials and treatment processes
- advise engineering, manufacturing and quality control departments on the properties, application, treatment, salvage and substitution of materials.

Project management engineers develop workplans and schedules designed to ensure the timely production of quality products, and avoid cost increases and delays in production. Project management engineers:

- estimate costs
- co-ordinate work flow
- work with other engineers to solve technical problems associated with production
- apply and implement ISO (International Organization for Standardization) principles and procedures
- supervise each stage of the production process to meet production schedules until the project is completed.

Working Conditions

Aerospace engineers work primarily indoors in offices and testing laboratories. They spend a considerable amount of time working with computers. They may also supervise work performed at production sites or manufacturing facilities, or work at a field site such as a launching pad.

Aerospace engineers may be required to work overtime to meet project deadlines. Project managers may be called back to work whenever there are problems with projects. They experience a great deal of pressure to meet deadlines or design standards. Some traveling may also be required.

Personal Characteristics

Aerospace engineers need the following characteristics:

- inquiring, creative and inventive minds
- patience, motivation, determination and perseverance
- strong problem-solving skills
- an aptitude for mathematics and science
- excellent oral and written communication skills
- a capacity for details.

They should enjoy being innovative, doing work that requires precision and working in a team environment.

Educational Requirements

The minimum educational requirement for entry-level employment as an aerospace engineer is a **bachelor's degree in engineering or applied science.** Advanced specialist engineers in the aerospace industry should have at least a master's degree. Aerospace engineers engaged in research and development frequently have doctoral (PhD) degrees.

Several Canadian post-secondary institutions offer degree programs related to aerospace engineering:

- **Carleton University** in Ottawa offers bachelor's, master's and doctoral degree programs in aerospace engineering.
- **McGill University** in Montreal offers a master's degree program in aerospace engineering in collaboration with **Concordia University** in Montreal, **Ecole Polytechnique**, **Universite de Laval** and **Universite de Sherbrooke**.
- **Ryerson University** in Toronto offers bachelor's, master's and doctoral degree programs in aerospace engineering.
- **University of Toronto,** Faculty of Applied Science and Engineering offers a bachelor's degree program in

Engineering Science with an aerospace specialization. Master's and PhD programs are offered by the **University of Toronto Institute for Aerospace Studies.**

- **York University** in North York offers a bachelor's degree program in space and communication sciences that includes industrial internships. York University's Centre for Research in Earth and Space Science offers graduate studies programs in earth and space sciences.

A high school graduate may, however, enroll in any university-level engineering or science program and then specialize in aerospace engineering at the post-graduate level. A number of universities have mechanical engineering programs with some emphasis on aeronautical and aerospace disciplines.

In Alberta, four year degree programs in engineering are offered by:

- the **University of Alberta** in Edmonton
- the **University of Calgary**.

The minimum admission requirement for engineering programs at both universities is a high school diploma with an overall average of 78 or 80 per cent in English 30, Pure Math 30, Math 31, Chemistry 30 and Physics 30.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study to university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Employment in aerospace engineering is concentrated in cities such as Montreal, Toronto, Ottawa and Winnipeg and on military bases. There is some aerospace-related activity in Amherst and Dartmouth, Nova Scotia; Saskatoon, Saskatchewan; Edmonton, Calgary and Medicine Hat, Alberta; and Richmond and Kelowna, British Columbia.

Aerospace engineers usually start work under the direct supervision of senior engineers. With experience and a good track record, they are given additional responsibilities. They can advance to positions such as project manager, department head, division manager and vice president.

In Alberta, over 75 per cent of people employed as aerospace engineers work in the following industries:

- **Other Manufacturing**
- **Transportation and Warehousing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 50 Albertans are employed in the Aerospace Engineers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

No information is currently available regarding salary ranges in Alberta in this occupation.

Agricultural Commodity Inspector

Produced FEBRUARY 2005

Agricultural commodity inspectors ensure that agricultural products meet the production, storage and transportation standards set by federal and provincial agriculture departments.

NOC Number(s): 2222.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M i d**

Duties

The duties and responsibilities of agricultural commodity inspectors vary depending on the types of products they inspect (e.g. fruits and vegetables, meat, grains). They may specialize in a particular type of product or inspect more than one type of product. In general, however, they:

- conduct inspections, checking for sanitation, quality control and food safety programs
- ensure accurate product labelling and packaging
- interpret and enforce government acts and regulations, explain the standards required and make recommendations to agricultural product plant managers.

Dairy inspectors:

- conduct hazards analysis and critical control point (HACCP) inspections in dairy plants
- inspect dairy products, taking samples for microbiological assessment, ingredient verification, chemical residue testing and vitamin testing
- register dairy plants
- ensure that transportation and handling meet regulatory requirements
- ensure uniform standards of quality and proper labelling of pre-packaged products.

Some dairy inspectors specialize in providing consultative services for dairy plants in areas such as problem solving, equipment and product evaluation, plant construction and layout or food safety systems.

Fruit and vegetable inspectors:

- inspect fresh and processed fruit and vegetable products (including honey) at all stages of merchandising (with the exception of the retail phase)
- monitor the application of grade packaging and marking regulations
- inspect imported produce to check for disease or damage resulting from transit, storage or handling, and to ensure proper grading and labelling
- check processing plants for sanitation, quality and compliance with product standards.

Meat inspectors work in meat processing facilities where they:

- determine if animals are healthy and fit for slaughter
- inspect animal carcasses to determine if they are fit for consumption
- identify carcasses and portions of carcasses suspected of disease
- inspect facilities for sanitation and adherence to federal and provincial regulations regarding the manufacture, preparation and packaging of meat products.

Poultry inspectors:

- inspect wholesale establishments, storage facilities, registered egg stations, hatcheries or egg product plants
- monitor the grading done by company employees
- inspect sanitation procedures
- certify that the quality and condition of finished products meet established standards.

Plant products inspectors:

- examine the products of feed mills, seed cleaning plants, fertilizer plants, pedigree seed growers and formulated

pesticide retail outlets
- collect samples for laboratory analysis and ensure that the information contained on pesticide, fertilizer, seed and feed labels is correct
- inspect farmers' fields for purity of variety of pedigreed seed, establish the grade of seed, and label and seal the graded product.

Working Conditions

Agricultural commodity inspectors experience a wide variety of working environments depending on their specialty. They may work in:

- livestock auction markets and terminal yards
- frozen food plants
- canneries
- dairy plants
- meat and poultry processing plants
- hatcheries or egg stations
- nurseries
- fertilizer manufacturers, blenders and outlets
- feed mills
- producer fields
- pesticide manufacturing plants or distribution warehouses
- farms
- seed cleaning/conditioning plants.

Agricultural commodity inspectors may encounter unpleasant odours and loud noises from animals and machines. Lifting (up to 10 kilograms) is often required.

Commodity inspectors may meet many different people during a working day, and may be required to do a considerable amount of travelling. They sometimes work long and irregular hours.

Personal Characteristics

Agricultural commodity inspectors need the following characteristics:

- the ability to communicate well in person and in writing
- the ability to pay close attention to details.

They should enjoy having clear rules and organized methods for their work, analyzing information, and dealing with people.

Educational Requirements

The minimum education requirement for agricultural commodity inspectors is a high school diploma plus related experience or training. However, a post-secondary diploma or degree in a related subject (e.g. agriculture, animal health technology, food science) is a definite asset. Dairy specialists **must** have a related university degree such as a Bachelor of Science (B.Sc.) degree in Agriculture.

In Alberta, the following post-secondary institutions offer agriculture-related diploma and degree programs.

- **Lakeland College** in Vermilion
- **Lethbridge Community College**
- **Olds College**
- **University of Alberta** in Edmonton
- **University of Lethbridge**

Admission requirements vary, but generally include a high school diploma with specified Grade 12 English, math and science courses.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For information about animal health technology and food science programs, see the Animal Health Technologist, Food Scientist and Food Science Technologist occupational profiles.

Federal government meat inspectors undergo a three year on-the-job training program. Alberta government inspectors

undergo a two year on-the-job training program. All agricultural commodity inspectors must take professional development courses on an ongoing basis to keep up to date.

Employment and Advancement

(section revised JANUARY 2006)

Agricultural commodity inspectors are employed by provincial agricultural departments and the federal government's Canadian Food Inspection Agency.

Inspector trainees are trained on the job under the direction of an experienced inspector. Because inspectors' jobs are specific to particular industries, working and learning on the job is really the only comprehensive means of training. All trainees' activities are supervised while they learn legislation and regulations, and develop skills and judgment. After an initial training period of six months to one year, trainees are given increased responsibility. By their third year, they become full working-level inspectors who are capable of working independently.

Agricultural commodity inspectors are part of the larger National Occupational Classification 2222: Agricultural and Fish Products Inspectors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Food and Beverage Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including

- trends and **events** affecting overall employment (especially in the industries listed above),
- **location** in Alberta,
- **employment turnover** (work opportunities generated by people leaving existing positions),
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before), and
- **size of the occupation.**

Over 350 Albertans are employed in the Agricultural and Fish Products Inspectors occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for agricultural commodity inspectors vary according to the type and level of work performed.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Agricultural and Fish Products Inspectors occupational group working part-time or full-time earned an average salary of **$46,500 a year**.

Agricultural Engineer

Produced JUNE 2004

Agricultural engineers integrate engineering science and design with applied biological science to solve problems in agriculture, food and other resource industries.

NOC Number(s): 2148.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Agricultural engineers may specialize in areas such as the relationships among organisms and their environments, soil and water, structures and environments, power and machinery, electronic and computer applications, or electrical power and processing. Depending on their specialty, they may:

- use computer-aided design (CAD) technology to design equipment and machine parts
- develop plans for the design and layout of agricultural structures and utilities such as farm buildings, farm electrical systems or feed processing plants
- develop plans for drainage, waste management, land improvements and irrigation
- design and supervise environmental and land reclamation projects in agriculture and other related industries
- carry out environmental studies
- develop technologies and practices to improve the sustainability of crop and livestock production
- design food processing plants and related mechanical systems
- supervise food or agricultural value-added processing or manufacturing plant operations.

Working Conditions

Agricultural engineers work in offices but sometimes travel to production or processing sites, research laboratories or other locations to do field tests or study equipment and processes. Their work can be very demanding and time consuming due to the seasonal and weather-dependent nature of the industries in which they work.

Personal Characteristics

Agricultural engineers need the following characteristics:

- an aptitude for mathematics, physics, mechanics and the biological sciences
- strong computer skills
- the ability to analyze and solve problems
- a strong work ethic
- good communication skills, both oral and written.

They should enjoy being innovative and doing work that requires precision.

Educational Requirements

Agricultural engineering students may find a farm background helpful, but it is not essential.

A **bachelor's degree in agricultural or bioresource engineering** is the usual educational prerequisite for working in this field, although individuals who have degrees in civil, mechanical or other branches of engineering may work in certain types of agricultural engineering positions.

There is currently no bachelor's degree program in agricultural engineering available in Alberta. However, a scholarship is available for Alberta students studying in this field in other provinces. For more information, contact the Office of Student Awards at the University of Alberta.

The **University of Saskatchewan** College of Engineering in Saskatoon offers a Bachelor of Science degree in Agricultural and Bioresource Engineering. The university also offers related master's and doctoral degree programs. The admission requirement for the bachelor's degree program is a high school diploma with English 30, Pure Math 30, Biology 30, Physics 30 and Chemistry 30. Math 31 is recommended but not required.

For current information about programs (i.e. admission requirements) and mature student admission policies, please check post-secondary calendars or websites.

Post-secondary institutions across Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Agricultural engineering graduates usually begin working as trainees. As they gain experience, they advance to positions of greater responsibility within industry, government, universities or research institutes. Agricultural engineers in industry are employed by:

- producers, manufacturers and distributors of agricultural machinery, equipment and structures
- power and light companies
- food processing firms
- firms in the energy industry
- consulting firms.

They work as:

- project managers
- designers
- researchers
- sales and service advisors
- production managers.

In government, agricultural engineers may work:

- in community education
- in applied research
- in regulatory positions
- as consultants on the development of agricultural projects relating to the construction of specially designed buildings, machinery, irrigation and drainage, waste handling and energy conservation systems.

Teaching or doing research at the university level generally requires a doctoral (PhD) degree.

Advancement may come through assignments to more difficult or more responsible work, doing independent agricultural research, or developing new agricultural products. For those who have an interest in supervisory, administrative, or management positions, work as a chief engineer or plant manager may be an option. Many engineers seeking executive positions obtain graduate training in engineering or business administration to improve their opportunities for advancement.

Agricultural engineers are part of the larger National Occupational Classification 2148: Other Professional Engineers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Other Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 950 Albertans are employed in the Other Professional Engineers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since agricultural engineers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for agricultural engineers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

A growing number of agricultural engineers are finding employment in developing countries where their skills are needed to adapt existing technologies to local conditions.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Other Professional Engineers occupational group earned **up to $79,900 a year**. Those with three years of experience earned from **$41,500 to $67,200 a year.** The average salary was **$60,000 a year**.

Agricultural Equipment Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Agricultural equipment technicians repair, overhaul and maintain agricultural equipment such as tractors, tillage, seeding and harvesting equipment.

NOC Number(s): 7312
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M I

Duties

Duties vary from one position to another but, in general, agricultural equipment technicians:

- service and repair engines, transmissions, hydraulic systems, and the electrical and electronic systems of agricultural equipment
- pinpoint problems by discussing equipment operation with owners, visually checking and listening to machinery in operation, and using testing equipment
- take defective units apart, and repair or replace broken, worn-out or faulty parts
- reassemble, adjust, lubricate and test repaired units
- assemble and adjust new farm machinery.

They may specialize in fuel injection pumps and injectors, engine overhaul, hydraulic systems, power shift transmissions or specific types of equipment (e.g. combines).

Working Conditions

Agricultural equipment technicians may work in fully equipped service centres or they may travel to farms to make service calls. They may work long and hectic hours during planting and harvesting seasons.

Agricultural equipment technicians may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Agricultural equipment technicians need the following characteristics:

- mechanical ability and good hand-eye co-ordination
- the flexibility of working overtime when required
- physical strength and stamina
- the ability to read and understand technical manuals
- the ability to work independently with little supervision
- effective interpersonal and good customer service skills.

They should enjoy working with their hands and be capable of diagnosing complex mechanical problems.

Educational Requirements

Apprentices need some experience in the agriculture industry.

To work in Alberta, agricultural equipment technicians must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta high school transcript with a minimum of 100 credits with Math 10 or 13, Applied Math 10 or Pure Math 10 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Agricultural equipment technician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Keyano College in Fort McMurray
- Lakeland College in Vermilion
- Lethbridge Community College
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Fairview
- Olds College
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **Lakeland College** in Vermilion offers a six-month Agricultural Mechanics certificate program. The entrance requirement is Grade 10 or equivalent. Students must supply their own basic tools. A farm background is an asset.
- **Lethbridge Community College** offers a one year Agricultural and Heavy Equipment Technician certificate program. The entrance requirement is Applied Math 20 or Pure Math 20 and English Language Arts 20-1 or 20-2 or equivalent.
- **Olds College** offers a two year Agricultural Mechanic diploma program. The entrance requirement is a high school diploma or equivalent with Pure Math 20 or Applied Math 20 and English Language Arts 30-1 or 30-2.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Agricultural implement companies sometimes provide short manufacturers' service courses to help agricultural equipment technicians develop essential skills for servicing a particular line of equipment.

Employment and Advancement

Agricultural equipment technicians are employed by retail farm machinery dealerships.

Where a number of technicians are employed by one business, the opportunity exists for advancement to supervisory positions. Alberta certified journeyman agricultural equipment technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Some agricultural equipment technicians move into sales positions or become manufacturer's service representatives. Those who have business and administrative skills may move into a management position or purchase a farm machinery dealership.

Agricultural equipment technicians are part of the larger National Occupational Classification 7312: Heavy-Duty Equipment Mechanics. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Oil and Gas Extraction**
- **Wholesale Trade**
- **Repair, Maintenance, Personal and Other Services**
- **Transportation and Warehousing**

- **Metals, Metal Fabrication and Machinery Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 8,950 Albertans are employed in the Heavy-Duty Equipment Mechanics occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 170 to 270 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since agricultural equipment technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for agricultural equipment technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice agricultural equipment technicians are paid at least 60 per cent of the journeyman wage rate in their place of employment in their first year, 70 per cent in the second, 80 per cent in the third and 90 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$16 to $32 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Heavy-Duty Equipment Mechanics occupational group working part-time or full-time earned from **$22,000 to $126,800 a year.** The average salary was **$55,900 a year.**

Agricultural Products Processing Machine Operator

Produced FEBRUARY 2005

Agricultural products processing machine operators run machines that process and package food and beverage products.

NOC Number(s): 9461.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

For simplicity, agricultural products processing machine operators are called machine operators throughout this profile. They operate various machines depending on the type of product being processed, the methods used and the size of the organization and plant.

In general, machine operators:

- operate single function and multi-function processing machines
- observe gauges, computer printouts and video monitors to ensure correct processing
- make adjustments as required
- maintain shift logs of production and other data
- prepare products for wholesale or retail distribution
- check product quality and adjust as necessary.

Depending on the type of operation, they also may:

- set up or adjust machines for specific processing operations
- package and label products for sale
- record production information
- serve customers
- load transport trucks.

Dairy plant machine operators run machines that pasteurize milk or process and package dairy products such as cheese, ice cream, butter, non-fat dry milk and condensed milk.

Fruit and vegetable machine operators operate machines that clean, wash, sort, trim, peel and cut fruit and vegetables. They may also operate machines that process fruit and vegetables and package products for sale.

Grain processing machine operators process grain into animal feed or food products such as flour, cereal, pasta, cooking oil, margarine or beer.

Working Conditions

Working conditions for machine operators vary. Most production line work is performed indoors in warm, sanitary and well-ventilated conditions. Some machine operators work in cold storage or freezing departments; in grain processing plants which can be dusty, near noisy machinery; or near cooking or sanitizing operations that generate heat and create humid surroundings. In some settings, machine operators work close to others in relatively small spaces.

Production line processing is often highly mechanized and automated. Machine operators must follow safe work practices and may be required to lift items weighing up to 25 kilograms.

Some plants operate 24 hours a day, seven days a week so employees work rotating shifts.

Personal Characteristics

Machine operators need the following characteristics:

- good health and stamina
- a high degree of co-ordination and manual dexterity
- the ability to work steadily and swiftly
- the ability to perform routine tasks yet remain alert and flexible
- the ability to read and understand written specifications and instructions, and adapt to new technologies
- the mechanical aptitude required to maintain equipment and trouble-shoot problems.

They should enjoy operating and controlling equipment, having clear rules and organized methods for their work, and adjusting machines and process variables such as cooking times and temperatures.

Educational Requirements

There are **no standard educational requirements** for work in a processing plant. However, employers may require job applicants to have a high school diploma or related post-secondary education. The degree of skill required to operate processing machinery varies depending on the nature of the operation.

On-the-job training is provided to teach workers how to operate and maintain machines, and trouble-shoot mechanical problems. Depending on the nature of the equipment, three months or more of on-the-job experience may be required before a machine operator is ready to work independently. In some situations, workers may be cross-trained on other machines as well.

Other Requirements

Pasteurizer operators are required to obtain a pasteurizer operator's license by successfully completing a mandatory three-and-a-half day licensing course. Licenses must be renewed annually.

Employment and Advancement

(section revised JANUARY 2006)

Agricultural products processing machine operators are employed by food and beverage processing plants including:

- bakeries
- breweries
- dairies
- flour mills
- fruit and vegetable processing plants
- meat plants
- sugar refineries
- seed plants and feedmills.

New employees usually start working as general plant help and may be rotated throughout the plant to gain overall exposure to the plant's operation. Advancement from general plant help to a skilled positions comes through specific on-the-job training. As employees become skilled in particular production processes, they may advance to positions such as lead hand or shift supervisor.

Agricultural products processing machine operators are part of the National Occupational Classification 9461: Process Control and Machine Operators, Food and Beverage Processing. In Alberta, most people employed in this classification work in the **Food and Beverage Products Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Food and Beverage Products Manufacturing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Process Control and Machine Operators, Food and Beverage Processing occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**:

Since agricultural products processing machine operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for agricultural products processing machine operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries vary considerably depending on the size and nature of the plant and the level of skill required.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Process Control and Machine Operators, Food and Beverage Processing occupational group working part-time or full-time earned from **$11,900 to $54,000 a year.** The average salary was **$26,300 a year.**

Agrologist

Produced AUGUST 2005

Agrologists provide advice and conduct research related to agricultural and environmental science and technology. They apply scientific principles to the production, improvement, use, processing and marketing of plants and animals, and the management of related resources.

NOC Number(s): 2123
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I S D**

Duties

Agrologists may be involved in agricultural science and technology fields ranging from farming, food processing, packaging, transportation and marketing to the protection of soil, water and wildlife resources. Those employed in the public sector may:

- develop and distribute information and advice for the public and stakeholders in the agri-business and agri-food industries
- develop and distribute specialized information and training materials for producers (e.g. grain farmers, livestock producers)
- manage and co-ordinate government programs and make recommendations regarding agricultural and resource use policies
- anticipate economic opportunities and challenges, and develop appropriate strategies
- promote the sustainable development of agricultural resources
- act as liaisons between researchers, government personnel, business managers, environmental groups, educators and others
- conduct research and prepare research reports.

Agrologists employed in the private sector may be involved in:

- crop or livestock production
- market development
- production input management
- agri-food business management
- ensuring products meet quality and regulatory requirements
- research and development of new products and services
- sales and marketing (for more information, see the Technical Sales Representative occupational profile).

Agrologists usually specialize in specific fields such as:

- beef, pork, poultry or diversified livestock production
- production of grain and other field crops
- farm management
- agri-business development and marketing
- soil and land management
- reclamation and remediation
- design and management of irrigation and drainage systems
- agri-business financial planning and lending
- land use planning
- education and training about particular aspects of agriculture.

Working Conditions

Working environments in this occupation range from offices and research settings to processing and manufacturing facilities to farm fields and ranch pastures. In rural areas, agrologists may spend long hours travelling. They generally work weekday office hours but may be required to do some evening and weekend work. Workloads may vary depending on the season.

Personal Characteristics

Agrologists need the following characteristics:

- the intellect, curiosity, creativity, patience and perseverance required to solve complex problems and keep their technical knowledge up to date
- good oral and written communication skills
- good organizational skills
- good analysis and problem solving skills
- interpersonal and leadership skills
- the ability to work independently or as part of a team.

They should enjoy co-ordinating, analyzing and synthesizing information to develop innovative solutions to problems, working with people, and advising and supervising others.

Educational Requirements

The minimum education requirement is the equivalent of a **four year bachelor's degree in agriculture** that is recognized by the Alberta Institute of Agrologists (AIA). Applicants also must complete articling requirements. A farm background is an asset but not required.

In Alberta, the AIA recognizes programs offered by the **University of Alberta** in Edmonton and the **University of Lethbridge**:

- the University of Alberta four year Bachelor of Science (B.Sc.) degree program in Agriculture. The entrance requirement is an average of 65 to 80 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Biology 30, Chemistry 30 and one other approved 30 level subject.
- the University of Alberta four year B.Sc. program in Agricultural/Food Business Management. The entrance requirement is completion of 30 credits in the Agriculture program, 24 of which must be transferable, and a minimum grade point average (GPA) of 2.7/4.
- the University of Alberta four year B.Sc. program in Environmental and Conservation Sciences. The entrance requirement is an average of 65 to 80 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Biology 30, Chemistry 30 and one other approved 30 level subject.
- the University of Lethbridge four year Bachelor of Arts program in Agricultural Studies. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30 or equivalent), two other 30 level subjects and a fifth Grade 12 subject. Biology 30 is recommended.
- the University of Lethbridge four year B.Sc. program in Agricultural Studies. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30 or equivalent), Biology 30, Chemistry 30 and another Grade 12 subject. Math 31 is recommended.
- related graduate degree programs offered by both universities.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary institution calendars or websites.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Other Requirements

(section revised SEPTEMBER 2005)

Agrologist is a protected title under Alberta's Agrologists Act. This means that to call yourself an Agrologist, you must be a registered member of the Alberta Institute of Agrologists (AIA). You do **not** have to be a registered AIA member to work in Alberta; however, employers may prefer to hire job applicants who are registered AIA members.

Employment and Advancement

(section revised JANUARY 2006)

Agrologists work for:

- federal, provincial and municipal government departments
- manufacturers and suppliers of agricultural production inputs (e.g. fertilizers, pesticides, feedstuffs, seeds, livestock)
- farm business advisory services
- financial institutions
- agri-food companies
- agricultural producers
- conservation authorities
- educational institutions
- consulting and appraisal firms
- oil and gas companies
- land reclamation companies.

Self-employed agrologists work on a contract basis.

New graduates may work on a seasonal basis until they gain experience. A doctoral degree is usually required to direct and administer research programs or teach at the university level.

Experienced agrologists may advance to supervisory and management positions.

Agrologists are part of the National Occupational Classification 2123: Agricultural Representatives, Consultants and Specialists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Wholesale Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 550 Albertans are employed in the Agricultural Representatives, Consultants and Specialists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (Note: Not all agrologists are employed in this classification. For example, some may be classified in 2115: Other Professional Occupations in Physical Sciences or 6221: Technical Sales Specialists - Wholesale Trade. For more information, see the Soil Scientist and Technical Sales Representative occupational profiles.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Agricultural Representatives, Consultants and Specialists occupational group earned **up to $72,200 a year.** The average salary was **$61,200 a year**.

© Government of Alberta, Human Resources and Employment

Air Traffic Controller

Produced OCTOBER 2005

Air traffic controllers are responsible for the safe, efficient and orderly movement of aircraft within an assigned airspace and on the ground at airports.

NOC Number(s): 2272.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M D**

Duties

Air traffic controllers specialize in VFR (Visual Flight Rules) or IFR (Instrument Flight Rules) control. Straight line of sight enables VFR controllers to identify and resolve visual air traffic conflicts. IFR controllers use radar, procedural standards and the Northern Airspace Display System (NADS).

Tower controllers direct air traffic within a five to fifteen kilometre radius around an airport. They work in a glass-walled room at the top of airport control towers. As a group, they are responsible for ensuring the safe separation and movement of airport vehicles and departing, landing and taxiing aircraft.

Enroute/terminal controllers work at area control centres where they:

- use radar and communications technologies to track flights and keep aircraft separated as they fly along airways (usually above 20,000 feet) and land or take off at airports that do not have control towers
- transfer control to other controllers when aircraft leave the control centre's airspace
- start search and rescue operations to find overdue aircraft.

Each area control centre is responsible for more than 250,000 square kilometres of airspace (that generally covers an entire province) and has between 110 and 250 controllers on staff.

Working Conditions

Air traffic controllers normally work rotating shifts so their days off don't necessarily fall on the weekend. In most facilities, shifts cover the full 24 hours each day.

On the job, air traffic controllers must make rapid decisions and often work under considerable pressure.

Personal Characteristics

Air traffic controllers must be:

- decisive
- stable
- mature
- mentally alert
- able to accept responsibility
- able to handle details quickly and accurately
- able to take two dimensional data and convert it into three dimensional visualizations.

They should enjoy using specialized equipment and instruments, having clear rules and organized methods for co-ordinating information, and taking charge of situations.

Educational Requirements

To be employed by NAV Canada, air traffic controllers must:

- be Canadian citizens or landed immigrants
- be at least 18 years of age
- have successfully completed Grade 12 or equivalent education
- pass the Air Traffic Controller basic aptitude exam and interview
- qualify for security clearance
- pass a civil aviation medical exam
- have good hearing and vision (including colour perception)
- have good oral communication skills (diction, enunciation, voice projection) and a command of the English language for positions outside of Quebec. Knowledge of both English and French is essential for positions in Quebec and Ottawa.

Recommended high school courses include mathematics (algebra and trigonometry) and physics. Experience talking to groups or over microphones, and hobbies that require some knowledge of air regulations and aeronautics are assets.

After VFR (airport controller) candidates are accepted into the training program, they are enrolled in the **NAV Canada** Training Institute at Cornwall, Ontario, for five to six and a half months. After IFR (enroute/terminal controller) candidates are accepted, they are enrolled at an Airport Control Centre for anywhere from 156 to 319 training days. Entrance and training standards are very high; not all candidates successfully complete the training.

Employment and Advancement

(section revised JANUARY 2006)

Air traffic controllers are employed by NAV Canada. Application forms and information are available on the **NAV Canada website** or by calling 1-877-389-9934.

After their training, air traffic controllers may be assigned to any Air Traffic Control Centre or Tower in Canada.

Air traffic controllers are part of the larger National Occupational Classification 2272: Air Traffic Control and Related Occupations. In Alberta, most people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 800 Albertans are employed in the Air Traffic Control and Related Occupations group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since air traffic controllers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for air traffic controllers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for air traffic controllers range from **$43,000 to $101,00 a year**. Trainees earn $30,000 a year **(2005 figures).** For current salary figures, see the NAV Canada website.

Aircraft Maintenance Engineer

Produced SEPTEMBER 2003

Aircraft maintenance engineers are licensed by Transport Canada to inspect and certify that work done on an aircraft complies with written airworthiness standards. They may specialize in different types of aircraft such as turbo jets, helicopters or propeller-driven airplanes.

NOC Number(s): 7315.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M**

Duties

Duties and responsibilities vary from one position to another but, in general, aircraft maintenance engineers:

- repair, replace, assemble and install aircraft parts
- test the operation of aircraft systems to locate the source of malfunctions and trouble-shoot problems
- inspect parts for wear or other defects
- perform routine maintenance tasks such as changing oil and cleaning filters
- conduct and record routine and special inspections as required by regulations
- certify that maintenance meets standards
- supervise aircraft maintenance workers
- make entries in technical records.

Working Conditions

Aircraft maintenance engineers work on aircraft indoors in hangars or shops, and outdoors. They may work in noisy environments, in uncomfortable positions or on scaffolds, and be required to lift items weighing up to 25 kilograms or use hoists to move larger, heavier objects. Having to work quickly while still observing safety standards can be stressful.

Aircraft maintenance engineers often work during the evening and night when airplanes are not in use. Shift work, overtime and being on call are common. Some aircraft maintenance engineers work away from home in remote locations for extended periods of time.

Personal Characteristics

Aircraft maintenance engineers need the following personal characteristics:

- excellent mechanical aptitude
- good eyesight and hearing
- good eye-hand and muscle co-ordination
- the desire and ability to be careful and accurate to the smallest detail
- the ability to work well with others but also to make decisions independently, often under pressure
- the physical fitness and agility required for reaching and climbing
- the ability to select, interpret and follow instructions provided in written or blueprint form, and to interpret regulations.

They should enjoy using tools, equipment and machinery to perform tasks requiring precision, analyzing information and troubleshooting problems, and having organized methods for their work.

Educational Requirements

(section revised JUNE 2004)

In Alberta, the following institutions offer training programs approved by Transport Canada. These are quota programs so better than minimum specified qualifications may be required to gain admission.

The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers:

- a one year (three semesters) Aircraft Skin and Structure Repair program. The entrance requirement is Grade 11 English, math and science (Physics 20 recommended).
- a two year Avionics Engineering Technology diploma program. The minimum admission requirement is a high school diploma or equivalent with English 30 or 33, Math 30 (or 60 per cent in Math 33 or Pure Math 30), and one of the following: Physics 30 (recommended), Science 30 or Chemistry 30. Keyboarding skills are an asset.

The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers:

- a one year Aircraft Structures Technician certificate program. The entrance requirement is a high school diploma or equivalent with Grade 12 English and math.
- a two year Aircraft Maintenance Engineers Technology diploma program. The entrance requirement is a high school diploma with English 30 or 33 and Math 30, Math 33, Pure Math 30 or Applied Math 30.
- a two year Avionics Technology diploma program. The entrance requirement is a high school diploma with English 30 or 33 and Math 30, Math 33, Pure Math 30 or Applied Math 30.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Many companies provide ongoing compulsory and voluntary training courses to help their aircraft maintenance engineers upgrade and update their qualifications. To remain valid, a licence must be renewed every five years and the holder must meet current requirements.

Aircraft maintenance engineers are required to supply their own hand tools. Specialized tools and equipment are usually supplied by the employer.

Other Requirements

All maintenance on aircraft must be certified by **licensed** Aircraft Maintenance Engineers. AME licences are issued by Transport Canada in different categories and are further divided into specific groups (endorsements) within each category. Training, experience and examination requirements vary with each licence category and group but, in general, applicants for licensing must be:

- at least 21 years of age
- able to provide proof of citizenship
- able to read and answer examination questions in English or French, without assistance.

All applicants must write an air regulations exam.

An **AME - Category M** licence authorizes AMEs to certify work for the type of aircraft for which they are endorsed and trained (e.g. helicopters, piston powered airplanes, turbo propelled aeroplanes). To qualify, applicants must:

- have successfully completed a Transport Canada approved or accepted maintenance training course
- have four years of satisfactory maintenance experience, one year of which must be on complete aircraft for the group for which the individual is endorsed
- provide evidence of having completed at least 70 per cent of the tasks relevant to the category sought.

An **AME - Category E** licence authorizes AMEs to certify work on avionics systems. To qualify, applicants must:

- successfully complete a Transport Canada approved basic avionics training course
- have four years of maintenance experience on aeronautical products, one year of which must be on installed avionics systems for the appropriate group.

An **AME - Category S** licence authorizes AMEs to certify structural work on the type of structures for which they are trained. To qualify, applicants must have:

- successfully completed a Transport Canada approved or accepted structure training course
- three years of maintenance experience with twelve months appropriate to the group for which the AME is endorsed.

Employment and Advancement

(section revised JANUARY 2006)

Aircraft maintenance engineers may be employed by:

- large and small air carriers
- aircraft repair and overhaul companies
- flight training schools
- aeronautical product manufacturers
- component shops.

A willingness to relocate is an employment advantage.

Experienced, licensed aircraft maintenance engineers may advance to supervisory and management positions in approved maintenance organizations. Some aircraft maintenance engineers are employed as sales representatives for aeronautical products or quality control inspectors.

Aircraft maintenance engineers are part of a larger National Occupational Classification 7315: Aircraft Mechanics and Aircraft Inspectors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Transportation and Warehousing**
- **Other Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,650 Albertans are employed in the Aircraft Mechanics and Aircraft Inspectors occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since aircraft maintenance engineers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for aircraft maintenance engineers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for aircraft maintenance engineers depend on factors such as location, the size of the employing organization, the type and quality of equipment and aircraft, and the individual AME's licence and endorsements.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Aircraft Mechanics and Aircraft Inspectors occupational group working part-time or full-time earned from **$20,200 to $82,000 a year.** The average salary was **$48,800 a year.**

Since this group includes mechanics and inspectors who may not be licensed, salaries for licensed AMEs are probably toward the high end of this range.

Airline Pilot

Produced OCTOBER 2003

Airline pilots fly aircraft transporting passengers, cargo and mail. With the exception of some small aircraft, a captain and first officer work together on commercial flights.

NOC Number(s): 2271.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I D**

Duties

The captain and first officer usually arrive at the air terminal about one hour before flight time to check enroute weather, prepare the flight plan and brief the crew. Once in the cockpit, they check emergency equipment, flight instruments, radios, electronic equipment and fuel load. After passengers board the plane and cargo is loaded, pilots conduct final instrument checks.

Take-off, climb-out, descent and landing require concentration on complex procedures and the ability to make logical decisions quickly. In the air, pilots:

- make periodic position reports
- calculate and revise flight plans as necessary
- enter data in the aircraft log book
- monitor aircraft systems
- monitor air traffic control for traffic information, clearances and weather information
- make announcements regarding the flight on the public address system.

Pilots' specific duties vary according to the type of aircraft and the length and nature of the flight.

Working Conditions

All airline pilots must work on weekends and holidays. In most airlines, pilots spend approximately 75 hours a month in the air plus preparation time on the ground. They may be assigned blocks of flight times (one to three month schedules) according to seniority and required to work reserve duty with rotating days on call and days off.

Smaller charter airlines fly on an unscheduled demand basis so working hours can be very irregular. Charter and corporate flying may involve long periods of waiting and require extended periods away from home.

Pilots spend much of their time in cramped aircraft cockpits and are sometimes exposed to dangerous situations.

Personal Characteristics

Pilots need the following characteristics:

- good spatial perception
- good motor co-ordination
- leadership qualities
- the ability to work well with others in a team.

They should enjoy operating aircraft and related equipment, evaluating aircraft performance and directing the work of others.

Educational Requirements

(section revised JUNE 2005)

Pilots should have **at least a high school diploma** with good standing in mathematics and physics and be fluent in spoken and written English. A university degree, or a college or technical diploma is a definite advantage. Fluency in French is also an asset.

Airline pilots usually are between 20 and 35 years of age when they start employment with an airline. Major airline companies require vision corrected to 20/20. Family and personal medical history should be good with no mental or physical problems which would interfere with the safe handling of an aircraft. Airline pilots must be in top physical condition to pass the annual Transport Canada physical examination.

The **minimum licensing requirement** for airline pilots is a Canadian Commercial Pilot's Licence with night endorsement, instrument flight rating and a Canadian Radio Telephone (Restricted) Licence. Some airlines require, and others prefer to hire, pilots who have:

- an Airline Transport Pilot's Licence with multi-engine endorsement and Class I Instrument Rating
- several thousand hours of flying experience
- an advanced training ground school course on aviation subjects or related post-secondary education
- previous commercial flying experience.

Training programs are offered by private flying clubs and schools throughout Alberta. The cost for a qualified instructor and plane rental varies.

The following institutions offer airplane pilot or aviation programs from which students can graduate with a commercial pilot's licence and multi-engine instrument rating:

- **Adventure Aviation** in Grande Prairie
- **Aircraft Services (Lloydminster Ltd.)**
- **Bar XH Air Inc.** in Medicine Hat
- **Border City Aviation Ltd.** in Lloydminster
- **Calgary Flight Training Centre** in Calgary
- **Calgary Flying Club** in Calgary
- **Centennial Flight Centre Ltd.** in Edmonton
- **Cooking Lake Aviation Academy Inc.** in Sherwood Park
- **Edmonton Flying Club** in Edmonton
- **Excel Flight Training Inc.** in Lethbridge
- **Fly Right Ltd.** in Calgary
- **Frontier Flying Ltd.** in Cold Lake
- **LFC Flight Centre (2000) Inc.** in Lethbridge
- **McMurray Aviation** in Fort McMurray
- **Morgan Air Services Co. Ltd.** in Calgary
- **Mount Royal College** in Calgary
- **Mountain Air Flight Center** in Rocky Mountain House
- **Namao Flying Club**
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Prairie Bible College** in Three Hills
- **Red Deer College** in Red Deer
- **Sky Wings Aviation Academy** in Penhold and Okotoks
- **Springbank Aero Flight Training Inc.** in Calgary
- **Springbank Air Training College Ltd.** in Calgary
- **Weber Aviation Inc.** in Lac La Biche
- **Wetaskiwin Air Services Ltd**. in Wetaskiwin.

Flying clubs and schools generally require applicants for commercial pilot training to have a private pilot's license, meet all Transport Canada requirements including a Category 1 Aviation medical and be at least 18 years of age prior to taking the test. The entrance requirements for college and technical institute programs also include a high school diploma with English 30 and Pure Math 30. Physics 30 is recommended.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

After they are employed, airline pilots must continue to study operating manuals to keep up to date with improvements to

facilities, equipment and procedures. They are also required to complete practice and check flights, in flight simulators and aircraft, at regular intervals to requalify for their licences.

Employment and Advancement

(section revised JANUARY 2006)

Pilots must acquire the required flying experience before they are eligible for airline pilot positions. Competition for airline positions is keen. Prospective pilots should be willing to relocate to find employment.

In major airlines, starting pilots must complete a three to four month course before they are assigned to a pilot base. They generally start as second officers on heavy aircraft such as a B-747, DC-10, L-1011 or DC-8, or as first officers on medium or short-range aircraft such as a DC-9, B-737 or A-320. Promotions depend upon ability and seniority. Opportunities for advancement to executive positions are limited and require business education.

Airline pilots are part of the larger National Occupational Classification 2271: Air Pilots, Flight Engineers and Flying Instructors. In Alberta, over 75 per cent of people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Air Pilots, Flight Engineers and Flying Instructors occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since airline pilots form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for airline pilots.)

Employment turnover is generally low in this occupation but is expected to increase as members of the baby boom generation retire.

Salary

(section revised OCTOBER 2005)

Salaries increase after completion of the initial training, with years of experience, and according to other factors such as aircraft gross weight and overseas differential. Other employee benefits vary depending on the company.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Air Pilots, Flight Engineers and Flying Instructors occupational group working part-time or full-time earned from **$20,200 to $131,000 a year.** The average salary was **$52,100 a year.**

Airline Ticket Agent

Produced OCTOBER 2003

Airline ticket agents make reservations and sell tickets to passengers travelling by air.

NOC Number(s): 6433.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S O**

Duties

Airline ticket agents' duties and responsibilities vary from one airline to another but, in general, they:

- provide information over the phone or in person regarding routes, schedules and fares
- process passenger flight reservations and issue tickets
- prepare boarding passes at airports, check baggage, announce flights and assist passengers who have special needs.

They may also arrange for cargo shipments or provide related customer services for airline passengers.

Working Conditions

Airline ticket agents work shifts (including evenings, weekends and holidays) with rotating days off. During vacation seasons and around holidays, they may be required to work overtime.

At airport ticket counters, the work environment can be hectic and some customers are difficult to deal with, especially when poor weather conditions cause delays.

Personal Characteristics

Airline ticket agents need the following characteristics:

- a well-groomed and friendly appearance
- a good speaking voice
- good communication skills
- the ability to remain tactful and courteous at all times.

They should enjoy having clear rules and organized methods for their work, talking to people and operating equipment.

Educational Requirements

Airline ticket agents must have Transport Canada security clearance. Employers prefer to hire applicants who have a **high school diploma or related experience** in clerical, sales or related public contact positions. The ability to speak other languages, a good knowledge of geography, keyboarding and computer skills, previous airline experience or post-secondary courses in travel and tourism are definite assets when applying for employment. Some employers require job candidates to be able to communicate fluently in both English and French.

Airline companies may require successful job applicants to attend a training session ranging in length from three to seven weeks. New employees may be required to relocate wherever the company needs staff.

Employment and Advancement

(section revised JANUARY 2006)

Airline ticket agents are employed by airline companies, usually in or near urban centres. Competition for airline ticket agent positions is often keen. New employees usually work in casual or part-time positions in call centres. They may transfer to airports or ticket offices when they have sufficient seniority.

Airline ticket agents may advance to supervisory positions (e.g. customer service manager, cargo manager or reservation manager). However, competition for such positions is usually keen and there are few other advancement opportunities.

Airline ticket agents are part of the larger National Occupational Classification 6433: Airline Sales and Service Agents. In Alberta, most people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,900 Albertans are employed in the Airline Sales and Service Agents occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since airline ticket agents form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for airline ticket agents.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries and employee benefits for airline ticket agents vary considerably from one employer to another. Employers may offer shift work premiums, irregular shift premiums or reduced airfares.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Airline Sales and Service Agents occupational group earned **up to $52,800 a year.** Those with three years of experience earned from **$25,000 to $40,800 a year.** The average salary was **$36,600 a year**.

© Government of Alberta, Human Resources and Employment

Animal Care Attendant

Produced FEBRUARY 2005

Animal care attendants feed, clean and generally care for animals in animal shelters, stables, kennels, pet shops, aquariums, zoos and wildlife parks.

NOC Number(s): 6483
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O D**

Duties

Duties vary depending on the type of animal but, in general, animal care attendants:

- clean and disinfect enclosures (e.g. pens, cages, aquariums, kennels, stalls) by removing feces, soiled bedding and left-over food, and washing floors, walls, windows, etc.
- spread fresh straw, paper, sawdust, gravel or other bedding materials
- keep cleaning tools (e.g. shovels, rakes, garbage cans) clean and in good repair
- feed and water animals according to a daily schedule
- observe animals and report any unusual behaviour or health concerns
- groom, trim, bathe and clip animals to maintain hygiene, comfort and appearance
- dust, spray or bathe animals to control insect pests
- help to administer treatments prescribed by veterinarians
- keep records.

Animal shelter, dog pound and wildlife rehabilitation facility attendants care for stray dogs, cats, other pets and wildlife as well as those surrendered by their owners. In addition to providing general care, they may:

- answer inquiries from the public
- contact dog and cat owners to inform them that their pets are at the shelter or dog pound
- assist in destroying unclaimed and unadoptable animals
- adopt out unclaimed animals after a specified waiting period or release rehabilitated wildlife.

Aquarists work in aquariums where they:

- feed and care for fish and other aquatic life
- clean aquariums and keep them in good working order
- maintain water quality for a variety of species of aquatic life
- check the chemical content, oxygen level and temperature of the water in the tanks
- add appropriate chemicals to the water when required or report their findings to other staff
- provide information about the aquarium to the public.

Grooms and stable workers care for horses at riding stables, horse farms and racetracks. In addition to the general care described above, they:

- exercise horses
- assist with basic training, breeding and foaling
- transport horses from one racetrack or competition to another
- act as trail guides
- clean and repair riding, jumping and racing equipment.

Kennel attendants care for dogs, cats and other pets which are being boarded, or bred and sold to the public. In addition to providing general care, they:

- exercise dogs
- answer inquiries from the public
- assist with the breeding and birthing of pedigreed dogs and cats.

Pet shop attendants work in retail stores where they care for and sell may different species of birds, fish, reptiles, cats, dogs, hamsters, guinea pigs, gerbils, monkeys and other animals and:

- sell pet supplies, pet accessories and related literature
- answer inquiries regarding pet care and pet supplies
- advise customers regarding choice of pet.

Zookeepers/wildlife park attendants care for animals in zoos and wildlife parks. They are usually assigned to a particular section of the zoo or park where they:

- assist other workers in transferring, restraining, crating and uncrating animals
- train animals
- make minor repairs on cages, settings and living areas
- watch for births, breeding and unusual behaviour, and record their observations in logbooks
- answer visitors' questions, advise people not to feed animals and warn them to be cautious around potentially dangerous animals.

Working Conditions

Animal care attendants may work entirely indoors in laboratories, animal shelters and pet shops, or they may work both indoors and outdoors in all weather conditions at kennels, stables, racetracks, aquariums, zoos or wildlife parks. No matter where they work, attendants must be able to tolerate unpleasant odours and not mind getting dirty. They may be required to restrain animals as well as lift and carry light (up to 5 kilograms) to heavy animals and cages (over 25 kilograms). Since attendants frequently handle animals, there is a risk of occasionally being bitten or scratched, or catching a disease that can be transfered from animals to humans.

Animals need daily care so most attendants work shifts including weekends and holidays.

Personal Characteristics

Animal care attendants need the following characteristics:

- reliable and alert
- gentle, quiet and patient with animals
- the ability to control animals
- physically fit and no allergies to animals
- good observational skills
- written communication skills.

Attendants who have regular public contact should enjoy dealing with people. Pet shop attendants must have an aptitude for sales.

Animal care attendants should enjoy having clear rules and guidelines for their work, and caring for animals.

Educational Requirements

Most employers prefer to hire attendants who have **previous animal care experience** in a work situation or with farm animals or pets. Some employers also require related training or post-secondary education.

- Some aquariums, zoos and wildlife parks require post-secondary education in the biological sciences, animal husbandry or a related field.
- Dog kennel staff must be knowledgeable about behaviours and problems with specific breeds.
- Dog pounds prefer to hire attendants who have some post-secondary education related to bylaw enforcement. (For more information, see the Bylaw Enforcement Officer occupational profile.)
- Employers of aquarists may require job candidates to have basic knowledge in the use and handling of hazardous chemicals (e.g. chlorine), some knowledge of plumbing and pool filtration systems, or certified scuba skills.

Regardless of whether they require previous experience, formal training or both, employers of animal care attendants usually provide some on-the-job training. Training programs also may be available through related associations.

The following colleges offer post-secondary programs and continuing education courses that are directly related to animal care:

- **Lakeland College** in Vermilion
- **Lethbridge Community College**

- **Olds College.**

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites. For information about Animal Health Technology programs in particular, see the Animal Health Technologist occupational profile.

Continuing education programs are often offered on an as needed basis.

Employment and Advancement

(section revised JANUARY 2006)

Employment opportunities for some animal care attendants are limited in Alberta. There are very few employers of aquarists, zookeepers, wildlife park attendants, animal shelter or dog pound attendants in the province. More opportunities exist for grooms, kennel attendants and pet shop attendants.

One way to get started in the field and gain the necessary experience is to do volunteer work or look for short-term employment during busy times such as spring and summer months or holidays periods when many employers of animal care attendants require additional staff.

Advancement possibilities are limited for many animal care attendants. Animal shelter or dog pound attendants, aquarists and zookeepers or wildlife park attendants may advance to supervisory positions. With experience and on-the-job training, grooms may become assistant trainers, trainers, drivers, barn foremen or, possibly, race secretaries or judges. Kennel attendants who are trained on the job to groom may become pet groomers (see the occupational profile Pet Groomer). With experience, kennel attendants and pet shop attendants may eventually become managers or start their own businesses.

Animal care attendants are part of the larger National Occupational Classification 6483: Pet Groomers and Animal Care Workers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,100 Albertans are employed in the Pet Groomers and Animal Care Workers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since animal care attendants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for animal care attendants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries vary widely depending on the type of animal and the employer.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Pet Groomers and Animal Care Workers group working part-time or full-time earned from **$10,100 to $36,700 a year.** The average salary was **$15,300 a year.**

Animal Health Technologist

Produced FEBRUARY 2005

Animal health technologists provide primary support to veterinarians by caring for animals, and assisting in the diagnosis and treatment of companion and livestock animal health disorders.

NOC Number(s): 3213
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O I**

Duties

Animal health technologists provide a wide range of animal health services under the supervision of veterinarians. In general, their duties include:

- emergency first aid
- collecting and preparing laboratory specimens for testing
- performing blood, urine, fecal and other routine laboratory tests
- filling prescriptions and administering prescribed medications and treatments
- receiving and preparing animals for examination or surgery
- monitoring clinical symptoms
- assisting veterinarians in surgically-related operations
- anesthetic induction and monitoring
- producing and developing radiographs
- performing dental cleaning
- restraining animals
- providing nursing care and rehabilitation therapy for animals
- implementing radiation safety and quality control procedures
- providing health care guidance to owners (e.g. regarding behaviour problems in pets, animal nutrition)
- assisting in the euthanasia and aftercare of animals
- cleaning, maintaining and sterilizing surgical and medical instruments and equipment
- pharmaceutical and product inventory management
- ensuring facility sanitation to control the spread of disease
- assisting in food animal monitoring programs
- maintain medical records and log books.

Animal health technologists also may have other responsibilities such as:

- writing reports
- recommending and selling products
- maintaining inventories of supplies
- maintaining research information
- reception, accounting and invoicing duties.

Working Conditions

Most animal health technologists are employed in veterinary clinics and hospitals, laboratories, research facilities and animal shelters. Some are employed by pharmaceutical and private companies, or work outdoors on farms, stockyards and feedlots.

Hours of work vary and may include weekends, nights, emergency on-call rotations or overtime to assist in emergencies. The work can be physically demanding. Depending on the work situation, animal health technologists may be required to lift up to or over 25 kilograms.

Animal health technologists sometimes have to work around strong, unpleasant odours. Occupational hazards include contact with potentially dangerous animals and potential exposure to radiation, biohazardous substances and waste, anesthetics (gases) and diseases that may be transmissible to human beings.

Personal Characteristics

Animal health technologists need the following characteristics:

- the ability to work quickly and decisively under pressure
- good manual dexterity
- an aptitude for math, record keeping and writing reports
- excellent communication and interpersonal skills
- good organization skills
- good physical health and strength
- a high degree of integrity.

They should enjoy having clear rules and guidelines for their work, and performing laboratory and diagnostic procedures.

Educational Requirements

Animal health technologists must have **a two year Animal Health Technology/Veterinary Technology diploma** accredited by the Canadian Veterinary Medical Association. In Alberta, the following institutions offer two year diploma programs in Animal Health Technology:

- **Lakeland College** in Vermilion. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or English 30 (or at least 65 per cent in ELA 30-2 or English 33), Chemistry 30 and at least 60 per cent in Biology 30 and Pure Math 20, Math 20, Applied Math 30 or Math 33. Applicants must complete a career investigation report and have 80 hours of voluntary or paid work experience in a veterinary clinic.
- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton and Fairview. The entrance requirement for the Edmonton program is a high school diploma or equivalent with English 30 or 33, Math 30 (Pure or Applied), Chemistry 30 and Biology 30. A career investigation report is required. Success in the program requires computer literacy.
- **Olds College**. This program includes 14 months at Olds College, two months of work experience and one month at the Western College of Veterinary Medicine in Saskatoon. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English Language Arts 30-1 or 30-2 (or English 30 or 33), Pure or Applied Math 30 (or Math 30 or 33), Chemistry 30 and Biology 30. A minimum of 80 hours of volunteer or work experience in a veterinary clinic must be completed within two years prior to admission.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Before enrolling in any program, prospective students should check with the **Canadian Association of Animal Health Technologists and Technicians** to make sure the program is recognized across Canada.

Other Requirements

In Alberta, membership in the Alberta Association of Animal Health Technologists (AAAHT) is required to work as an animal health technologist under the direction of a registered veterinarian. Graduation from an accredited Animal Health Technology diploma program and successful completion of an examination administered by the AAAHT are required for membership in the association.

Employment and Advancement

(section revised JANUARY 2006)

Animal health technologists may be employed by:

- private veterinary practices
- zoos, wildlife parks and rehabilitation centres
- biomedical research laboratories
- kennels, animal shelters and humane societies
- the Canadian Forces
- government departments and food inspection agencies (see the Agricultural Commodity Inspector occupational

profile)
- pet shops
- companies that sell animal care or pharmaceutical supplies
- farms and feedlots
- post-secondary institutions.

Animal health technologists may progress to positions of greater responsibility.

Animal health technologists are part of the larger National Occupational Classification 3213: Veterinary and Animal Health Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:
- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 650 Albertans are employed in the Veterinary and Animal Health Technologists and Technicians occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Veterinary and Animal Health Technologists and Technicians occupational group working part-time or full-time earned from **$14,200 to $44,200 a year.** The average salary was **$33,400 a year.**

Animator

Produced MAY 2005

Animators create the illusion of movement by manipulating sequences of still images. They may use a variety of materials and techniques including computer software, drawings on paper and three-dimensional sculptures.

NOC Number(s): 5241.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M S

Duties

Animators work on visual productions such as short and feature length films, television series, educational films, commercials and computer games. They may work independently or as part of a small team of animators on projects of their own creation, or they may work in the feature film, computer game or television departments of large animation studios.

Animators working on their own films:

- develop an initial concept or story idea
- sketch a storyboard (visual script) for the project
- create a dialogue (voice) track for the film (if desired)
- break down the soundtrack frame-by-frame
- digitally create, draw or build characters, sets and graphics
- assemble images digitally or film drawings, puppets or cutouts one frame at a time
- edit scenes together, matching them to the soundtrack
- edit in and mix additional tracks including music and sound effects
- market animations by screening finished films at local film co-operatives or cinemas, broadcasting animations on the Internet, entering animations in film festivals or showing them directly to broadcasters, film distributors or computer game developers.

Animators in large studios work within a director's guidelines and only on specified parts of a production. In general:

- the story department develops the concept
- the character designer designs the characters
- the art director creates the look of the film
- animators in the layout department (layout artists) create the technical plans for each scene
- animators in the storyboard department (storyboard artists) draw the script
- the director and sound editor are responsible for the soundtrack (planning during pre-production and editing during post-production).

Animators may specialize in one or more of the following types of animation:

- character
- settings or environments
- special effects
- titles or credits.

They also may specialize in techniques such as:

- cutouts
- clay or plasticine
- silhouettes
- rotoscoped drawings (traced from live action)
- pixillation (frame-by-frame movement of people and objects in a live action setting)
- computer-generated sequences integrated into film or video.

Animators usually specialize in two-dimensional (2D) or three-dimensional (3D) animation. 2D animation is an evolution of traditional cell or character animation, and may employ a wide variety of art materials and styles. 3D animation is often created with computer programs that add gravity, texture and other realistic effects.

Working Conditions

Animators often sit for long periods of time but, to really understand the movement they are creating, may regularly get up to act out their characters in front of a mirror or in front of colleagues. They work under the pressure of constant deadlines; 60-hour work weeks are not uncommon.

Personal Characteristics

Many animators work on a freelance or contract basis and therefore must be able to:

- promote themselves and market their talent
- adapt their artistic style to different studios and different clients
- convey their ideas to others
- work well with others as members of a team.

Animators should enjoy synthesizing information, finding innovative approaches, taking a methodical approach to tasks requiring precision (e.g. preparing specifications, estimating costs) and consulting with clients.

Educational Requirements

Animators are hired on the basis of:

- a strong "demo reel" of previous animation work
- strong colour theory, compositon and life-drawing skills as demonstrated in portfolios of their work
- ability to work quickly and meet deadlines.

Animators, including computer animators, need **fine art or graphic design training at the post-secondary level**. For information about related post-secondary programs in Alberta, see the Painter/Printmaker, Graphic Designer, Interactive Media Developer and Web Designer occupational profiles. The following post-secondary institutions offer programs directly related to animation:

- The **Alberta College of Art and Design** in Calgary offers a four year Bachelor of Fine Arts degree program in Media Arts and Digital Technologies. Applicants must have completed first year at the college (or equivalent education) with a grade point average (GPA) or at least 2.67/4. Applicants must also have an average of at least 70 per cent in English 30, Math 30 or Pure Math 30, a 30-level science (Physics 30 recommended), and Social Studies 30 or a 30-level Fine Arts option.
- **DevStudios**, a private vocational school in Edmonton, offers a 36 week 3D Animation and Digital Compositing program. The entrance requirement is a high school diploma or equivalent.
- **Sprott-Shaw Community College**, a private vocational school in Calgary, offers a 45 week Digital Animation program. Contact the school for entrance requirements.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Elsewhere in Canada, the following institutions offer animation programs:

- **Algonquin College** in Ottawa
- **Capilano College** in North Vancouver
- **Concordia University** in Montreal
- **Emily Carr Institute of Art and Design** in Vancouver
- **New Brunswick Community College** in Mramichi
- **Nova Scotia Community College** in Truro
- **Seneca College** in Toronto
- **Sheridan College** in Oakville

Admission requirements for these programs vary but, in general, include a high school diploma with English 30 (or equivalent) and appropriate samples of the applicant's art work. Competition for admission is often keen. Applicants are selected on the basis of their academic transcripts, submitted art work and an assessment of their suitability for the program.

Many post-secondary institutions offer individual courses in animation through Continuing Education. In Calgary, the **Quickdraw Animation Society** offers regular courses on various media and occasional workshops on special topics.

Before enrolling in any program, aspiring animators should discuss their training options with potential employers. Some major animation studios offer their own in-house training programs.

Employment and Advancement

(section revised JANUARY 2006)

Many animators start by taking a course from their local university or college. Some are then able to go on and apprentice at a local production studio. Another alternative is to seek out workshops and projects at film and video co-operatives.

Almost all animation work is freelance, paid on a contract basis. Most opportunities for animation work are found in larger cities where there is a lot of film, television and CD-ROM production (e.g. Vancouver, Toronto, Montreal). Many professional animators travel from city to city, working on short-term contracts.

Animators may work for:

- film and video production companies or post-production houses
- independent filmmakers
- television stations
- advertising companies
- computer game developers
- other computer-based multimedia developers or producers.

Many animators must supplement their income from animation with income from other work (eg. teaching, illustration, camera work).

Animators are part of the larger National Occupational Classification 5241: Graphic Designers and Illustrators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 6,950 Albertans are employed in the Graphic Designers and Illustrators occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 180 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since animators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for animators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

In Canada, animators negotiate each contract separately. Their incomes can vary greatly from one animator to another, and from one year to another.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Graphic Designers and Illustrators occupational group working part-time or full-time earned from **$15,800 to $92,600 a year.** The average salary was **$37,200 a year.**

© Government of Alberta, Human Resources and Employment

Announcer

Produced MAY 2003

Announcers read news, sports, weather, commercial and public service messages, and host live events as well as entertainment and information programs for broadcast on radio or television.

NOC Number(s): 5231
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S I**

Duties

Depending on the station and the market it serves, announcers may specialize in a particular type of work or share the following tasks with other station personnel. However, in general, radio and television announcers:

- research and write their own material (completely or in part)
- prepare stories for later broadcast (especially sports and news reporters)
- develop longer feature stories for local audiences
- read commercials and public service messages.

Announcers may also:

- operate control boards and other equipment for complex productions or programs
- run programming "on air" according to station schedules
- rewrite copy from wire services
- edit and read news, sports and weather reports at regular intervals.

Announcers are often invited to make public appearances or to serve as the master of ceremonies at special events. They may also broadcast live from commercial businesses or shopping malls, or be asked to judge contests.

Between music selections, **announcers who host music programs** on commercial radio stations:

- comment on the music, local events and interest stories
- use humour, small talk and background information to fill spaces
- offer giveaways and prizes to listeners
- follow a predetermined schedule for airing commercials
- answer calls from listeners.

In most radio stations, computer software programs are used to schedule the music for each radio program. In some stations, announcers play special listener requests.

When music announcers are off air, they record commercials for later broadcast, preview new music and prepare material for later shows. They also host local station and charity events, and participate in station promotions.

Talk show hosts and interviewers host radio and television shows that feature discussions with a variety of guests on topics of interest to the general public. Listeners may talk to guests live during the show and voice their own opinions about the topic. Most talk shows are recorded live in a radio or television station.

Talk show hosts and interviewers must research topics before going on air to talk about them.

Sportscasters are radio and television announcers who specialize in sports broadcasts. In general, they:

- attend press conferences to gather sports information
- cover live sporting events
- broadcast live play-by-play commentary
- interview players, coaches and owners for comments and reactions.

Sportscasters prepare their stories on computer terminals, working from material gathered from wire services and adding their own information. Sometimes, they host sports programs that feature interviews with sports figures or review recent or upcoming sporting events.

At regular intervals during the day and evening, sportscasters provide sport reports. These reports may be taped or broadcast live.

News broadcasters (newscasters and reporters) gather, organize and report the news. For more information, see the Reporter occupational profile.

Working Conditions

Announcers generally work shifts that often include evenings, weekends and holidays and may include early mornings or late nights. Sports announcers often work irregular hours or split shifts because their schedules are determined by sporting events. The work can be stressful because live broadcasting allows little room for error.

Announcers may work in comfortable, although sometimes crowded, studios or in broadcast booths at various locations.

Personal Characteristics

Announcers need the following characteristics:

- pleasant-sounding voices
- good enunciation
- a good command of the English language
- the ability to accurately pronounce foreign names
- excellent writing and reading skills
- self-confidence
- the ability to "ad lib " and provide interesting small talk
- the ability to relate to an audience
- a high level of interest and enthusiasm.

They should enjoy working with music, videos and other entertainment materials for broadcast, entertaining others and compiling information.

Educational Requirements

(section revised MARCH 2005)

Announcers must be able to write clearly and concisely, and keep up to date on current events. Interviewers must be able to guide discussions in a direction that is interesting and informative. Computer skills are a definite asset, especially with regard to digital on-air and sound editing systems.

Most announcers have **related post-secondary education**. In Alberta, the following post-secondary institutions offer related programs:

- The **Banff Centre for the Arts** offers short Television and Video programs. Applicants must be experienced in television production and provide samples of their work, two letters of reference and a statement of objectives.
- The **Canadian School of Modern Broadcasting,** a private vocational school in Edmonton, offers a 17 week Radio Broadcasting program that includes a four week work placement in the school's simulated radio station. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33, or equivalent and a personal interview.
- **Grant MacEwan College** in Edmonton offers a two year Journalism diploma program. The entrance requirement is a high school diploma with at least 65 per cent in English 30, Social Studies 30 and Math 33. Applicants must complete a Journalism Aptitude and Proficiency Test and a 400 word career report. Grant MacEwan College may also offer a Native Communications program.
- **Lethbridge Community College** offers a two year Communication Arts diploma program. The entrance requirement is a high school diploma with at least 60 per cent in English 30 (70 per cent in English 33) at least 60 per cent in Social Studies 30. An interview and a 500 word composition are also required.
- **Mount Royal College** in Calgary offers a two year Broadcasting diploma program. The entrance requirements include a high school diploma or equivalent, keyboarding skills, a portfolio, departmental testing and an interview.
- The **Northern Alberta Institute of Technology** in Edmonton offers a two year Radio and Television Arts diploma program with specializations in radio and in television. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33, and at least 50 per cent in Grade 11 math, science and social studies (Grade 12 math, science and social studies recommended). This is a quota program and competition for admission is keen. A career investigation report is required.

- The **Southern Alberta Institute of Technology** in Calgary offers a two year Cinema, Television, Stage and Radio diploma program with specializations in broadcast news, film/video, radio and television. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33. Typing skills are essential. A resume/portfolio, research paper and an interview may be required. SAIT also offers a two year Broadcast Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33 and Pure or Applied Math 30 or 33.
- The **University of Calgary** offers a four year Bachelor of Arts (BA) degree program and a five year BA (co-operative education) degree program in Communication Studies (in conjunction with SAIT). The entrance requirement is a high school diploma with an average of at least 60 per cent in English 30, Math 30 or 31 and three other appropriate Grade 12 subjects (French 30, 30S, 30N, Francaise 30 or French Language Arts 30 strongly recommended).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Announcers usually find work by marketing themselves through audition tapes and personal interviews. Aspiring announcers must be willing to start at small radio and television stations, usually in rural communities. Larger stations usually hire experienced announcers.

At small stations, announcers may host music shows and read news, weather and sports reports as well. Sometimes, they are also involved in writing commercial advertisements and selling air time.

Experienced announcers usually specialize in music, news, sports or interviewing. Movement from station to station is common as announcers seek positions with larger audiences or return to smaller stations in management positions. Announcers may become programming directors, station managers, news anchors or directors or executives with broadcasting companies.

Some announcers freelance as masters of ceremonies or disc jockeys for special functions, or record commercials on a contract basis.

Announcers are part of the larger National Occupational Classification 5231: Announcers and Other Broadcasters. In Alberta, over 75 per cent of people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 850 Albertans are employed in the Announcers and Other Broadcasters occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since announcers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for announcers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for announcers vary tremendously.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Announcers and Other Broadcasters occupational group working part-time or full-time earned from **$12,300 to $88,000 a year.** The average salary was **$29,700 a year.**

© Government of Alberta, Human Resources and Employment

Anthropologist

Produced NOVEMBER 2005

Anthropologists study the biological evolution of human beings and the nature of human societies and cultures.

NOC Number(s): 4169.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D M**

Duties

Anthropologists study all aspects of society and culture, past and present, including material possessions, traditions, beliefs, customs, languages, and patterns of subsistence and settlement. Their research may involve many different aspects of society (cultural beliefs and symbols, kinship and social organization, ethnicity, and religious, economic, political and legal aspects).

Anthropologists may specialize in particular geographic areas of the world, in particular populations in a locale or region, or in any of the following branches of anthropology:

- **Social and cultural anthropologists** study, compare and analyze socio-cultural information through close observation and contact with cultural, class or minority groups. For example, **medical anthropologists** study health-related beliefs and behaviours, the related history of disease, and the relationship between human health and the environment as indicated by such factors as nutrition and population changes. Social and cultural anthropologists try to study a society's concepts and world views without imposing concepts from their own cultural traditions.
- **Physical or biological anthropologists** may study the evolution of human physical characteristics as influenced by heredity and environment, or the behaviour and biology of non-human primates. Human remains are sometimes used in research. For example, **forensic anthropologists** assist police departments and pathologists in specialized forensic activities (for example, the identification of bone and tooth structures).
- **Linguistic anthropologists** study the development and everyday use of human languages and, in particular, modern language patterns and their influence on thought and action.
- **Applied anthropologists** look for practical solutions to particular problems in any of the above areas of anthropology. They may be employed by governments (for example, in immigrant or health services), industry (social impact assessments), First Nations (land claims or self-government research) or work as self-employed consultants.

Working Conditions

In urban settings, anthropologists' working conditions are usually quite pleasant and comfortable. However, anthropological research is sometimes conducted outdoors in severe weather conditions (extreme heat, cold or humidity), remote locations or foreign countries where environmental or personal risks may be high.

When they are doing field work, anthropologists may live in tents or in local housing and work long hours for extended periods of time. Their work can be slow and difficult.

Personal Characteristics

Anthropologists need the following characteristics:

- excellent reading, writing and research skills
- a natural curiosity about and a respect for other cultures
- a willingness to work in field conditions.

In some specializations, they also should be interested in blending social and natural science approaches to issues.

All anthropologists should enjoy gathering and analyzing data and finding innovative approaches to intellectual puzzles, consulting with and directing the work of others, and taking a methodical approach to reconstructing cultural records.

Educational Requirements

Anthropologists come from a variety of educational backgrounds. The minimum requirement for entry into this field is a bachelor's degree in a related discipline. Physical anthropologists require extensive training in human anatomy and biology.

Specialization in particular areas of anthropology generally requires a master's or doctoral (PhD) degree in anthropology. Research positions and teaching positions at the post-secondary level normally require a doctoral degree.

In Alberta, the following universities offer degree programs in anthropology:

- **Athabasca University** offers three and four year Bachelor of Arts (BA) degree programs in anthropology by distance education. Applicants must be at least 16 years of age.
- The **University of Alberta** in Edmonton offers a four year BA degree program in anthropology. The entrance requirement is a competitive average of 65 to 80 per cent in English Language Arts 30-1 (or English 30), a 30 level language other than English or Pure Math 30 (or Math 30), and three other approved 30 level subjects (Social Studies 30 recommended). The University of Alberta also offers Master of Arts (MA) and PhD programs in anthropology.
- The **University of Calgary** offers four year BA and Bachelor of Science (B.Sc.) programs in anthropology. The entrance requirement is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 or Math 30 or 31, and three of the following: Biology 30, Chemistry 30, Physics 30, Science 30, Social Studies 30, a 30 level language other than English, one five-credit Grade 12 subject. The University of Calgary also offers MA and PhD degree programs in anthropology.
- The **University of Lethbridge** offers four year BA and Bachelor of Arts and Science programs, and five year combined degree programs in anthropology. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), three other appropriate 30 level subjects and a fifth Grade 12 subject. The University of Lethbridge also offers an MA program in anthropology.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Most newly-graduated anthropologists are self-employed in business or contracted by government agencies. They may work for:

- museums as museum technicians and curators
- provincial and federal government departments involved in parks and historic site development, or cultural resources and public education
- private and public sector organizations that carry out market research, or social and historical research and impact assessments.

Due to very low employment turnover and a limited number of positions, employment and advancement opportunities are limited. There is a trend toward short-term, contract work rather than long-term employment with a single employer.

Anthropologists employed by universities are involved in teaching as well as field and laboratory research (for more information, see the University Professor occupational profile).

Anthropologists are part of the much larger National Occupational Classification 4169: Other Professional Occupations in Social Science. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Other Professional Occupations in Social Science occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since anthropologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for anthropologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Social Science occupational group working part-time or full-time earned from **$31,800 to $79,600 a year.** The average salary was **$54,900 a year.**

Appliance Service Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Appliance service technicians install, service and repair household and commercial appliances such as ranges, ovens, clothes washers, dryers, freezers, refrigerators, microwave ovens, dishwashers, waste disposers and waste compactors.

NOC Number(s): 7332.1
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M i

Duties

Duties vary from one position to another but, in general, appliance service technicians:

- determine the source of the problem by consulting with the customer, referring to the manufacturers' service manuals and bulletins, or using specialized tools and testing devices
- disassemble the appliance, clean all internal parts and replace any faulty or worn parts
- reassemble the appliance and adjust and test that it is working properly
- answer customers' questions
- provide cost estimates
- advise customers on the correct use and care of appliances
- prepare work orders, complete billing reports and maintain records for parts inventories and future service calls.

Working Conditions

Appliance service technicians usually work alone with little supervision. Those who repair portable appliances work indoors at a workbench in a shop. Technicians who repair large appliances usually have to drive a truck with an inventory of parts and tools.

Appliance service technicians usually work a 40-hour week, but overtime may be required for emergencies or busy times of the year. Some work Saturdays and evenings to serve customers and the hours of work can vary considerably for those who are self-employed.

Physical demands vary depending on the size of appliance. Installing and servicing large appliances requires moving heavy items and a considerable amount of standing, stooping, kneeling and reaching. Benchwork is not as physically demanding. There is some risk of physical injury due to electrical shocks, cuts, burns and muscle strain.

Technicians may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Appliance service technicians need the following characteristics:

- good mechanical aptitude and manual dexterity
- good eyesight and colour vision
- the ability to pay careful attention to details
- the ablility to keep up to date with changing technology
- a neat appearance
- good customer service skills.

They should enjoy problem-solving and working with their hands.

Educational Requirements

To work in Alberta, appliance service technicians must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 10 education with a "B" standing in Math 13, Pure Math 10, Applied Math 10 and English 10 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Courses in math and physics are particularly important.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,600 hours of on-the-job training each year with eight weeks of technical training in the first and second year and six weeks of technical training in the third. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Appliance service technician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Appliance service technicians are employed by:

- appliance dealers
- independent appliance service companies
- department stores
- appliance manufacturers' service departments
- gas and electric utility companies
- owners of rented appliances.

Experienced appliance service technicians employed in larger organizations may become specialists or advance to supervisory positions such as foreman or service manager. Alberta certified journeyman appliance service technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

With experience and knowledge of how to run a small business, appliance service technicians may start their own independent appliance service companies or appliance sales and service outlets. They may also become factory service representatives employed by manufacturers to supervise authorized repair depots in a particular region.

Appliance service technicians are part of the larger National Occupational Classification 7332: Electrical Appliance Servicers and Repairers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Retail Trade**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,500 Albertans are employed in the Electrical Appliance Servicers and Repairers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since appliance service technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for appliance service technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice appliance service technicians earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second and 85 per cent in the third. Journeyman wage rates for appliance service technicians employed in repair shops range from **$12 to $28 an hour plus benefits** (2005 estimate). According to the Alberta Provincial Apprenticeship Committee for this trade, journeymen who are self-employed or work on a commission basis may make more, depending on their skill and initiative.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Electric Appliance Servicers and Repairers occupational group earned from **up to $77,200 a year.** The average salary was **$35,700 a year**.

© Government of Alberta, Human Resources and Employment

Arbitrator

Produced OCTOBER 2005

Arbitrators resolve disputes by hearing arguments and evidence, and rendering decisions that may be filed in a court of law and legally enforced.

NOC Number(s): 1121
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M S**

Duties

Arbitrators have responsibilities similar to those of judges but their "courtroom" can be anywhere. The place and arbitrator are usually chosen by the disputants (the people involved in the dispute).

In general, arbitrators:

- conduct an initial meeting with disputants to outline the arbitration process, settle procedural matters such as meeting locations or arbitration fees, and determine the number of witnesses and how much time resolving the dispute is likely to take.
- conduct hearings in which each disputant gets a chance to present arguments and evidence, call witnesses and cross-examine the other party's witnesses.
- assess the merits and validity of the arguments and evidence presented.
- write a decision which makes an award and states the reasons for the decision.

Arbitration may be used to settle disputes between management and labour, businesses and consumers, claimants and insurance companies, business partners, marriage partners or other parties. Arbitration is recommended over taking a dispute to court when:

- the disputants want to resolve the conflict quickly and relatively efficiently and cost-effectively
- the dispute involves complicated matters requiring an arbitrator who has expertise in a particular field
- the parties can agree to a schedule and guidelines for resolving the dispute
- the dispute involves confidential matters.

Arbitration gives disputants the opportunity to choose an arbitrator who has some expertise regarding the issues in dispute.

Working Conditions

Arbitration can be a formal process or it can be quite informal depending on the circumstances. Arbitrators may conduct hearings in board rooms, hotel conference rooms or anywhere else that is acceptable to all parties. Likewise, hearing dates and times are negotiated at the beginning of the process.

Personal Characteristics

Arbitrators need the following characteristics:

- a neutral, unbiased attitude
- good communication skills including listening skills and the ability to write decisions clearly, logically and concisely
- the ability to establish rapport with all kinds of people
- the intellectual ability required to deal with complex factual material, analyze problems, and identify and separate the issues involved
- good judgement.

They should enjoy synthesizing information to develop innovative approaches to conflict resolution, co-ordinating information, and dealing with people.

Educational Requirements

Although many arbitrators have a professional background, there are no specified minimum education requirements for arbitrators. However, arbitrators need:

- an appreciation of the principles of natural justice
- a working knowledge of contract law and evidence
- a thorough understanding of the Alberta Arbitration Act and other relevant legislation.

Expertise related to the nature of the dispute is an asset.

The Continuing Education or Extension Services departments of the following post-secondary institutions offer a certificate program in Conflict Management in co-operation with the **Alberta Arbitration and Mediation Society (AAMS)**:

- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **Red Deer College**.

The AAMS program requires successful completion of 210 hours (30 days) of training including core and elective courses. Participants must successfully complete competency-based skill assessments in both negotiation and mediation. A two year time frame is recommended for completion of the program. There are no entrance requirements.

Mount Royal College in Calgary offers a Conflict Resolution certificate program through Continuing Education. This 220 hour program includes seven required courses and at least five optional courses. One of the two final assessments (Mediation or Negotiation) must be successfully completed. Applicants must be 18 years of age or older.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

The Alternative Disputes Resolution (ADR) Institute of Canada Inc. offers the designation Chartered Arbitrator (C.Arb.) to members who have related training and experience. In Alberta, the Alberta Arbitration and Mediation Society is the regional association of the Institute.

Employment and Advancement

Usually, arbitrators work in other occupations and contract their services as arbitrators when they are needed.

When people agree to take their dispute to arbitration, they must find a mutually acceptable arbitrator, preferably someone who has:

- training or experience in arbitration
- a good reputation for making sound, impartial decisions
- some knowledge of the subject area concerned in the dispute.

Disputants may obtain lists of suitable candidates from the Alberta Arbitration and Mediation Society or ADR Institute of Canada.

Procedures for appointing arbitrators vary. Disputing parties may choose a single arbitrator or a panel of three arbitrators. Or, if necessary, the court may appoint an arbitrator.

Salary

Arbitrators' fees are negotiated with disputants at the beginning of the arbitration process and **vary greatly.** Sometimes, arbitrators volunteer their time. Arbitrators who are lawyers, engineers, accountants or other professionals usually charge fees that are in line with their other professional fee structures.

Arborist

Produced MARCH 2005

Arborists maintain healthy trees, and treat or remove injured and diseased trees.

NOC Number(s): 2225.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M d**

Duties

Arborists' duties vary depending on where they are employed and their specialization. In general, however, they:

- prune trees to maintain tree health and improve structure
- evaluate trees for hazards and repair splitting or breaking branches by securing cables and braces to large limbs
- install lightning protection on trees
- diagnose and treat problems
- fertilize trees and provide advice on tree care
- remove trees, sometimes in confined spaces
- appraise the monetary value of trees
- plan and develop budgets for tree work
- provide information to the public
- supervise the work of tree crews or private contractors
- inspect work to ensure high standards
- provide related consulting services (e.g. tree care, hazard evaluation, inventory and appraisal).

Most arborists specialize in a particular area of tree care such as pruning, planting or tree health maintenance.

Working Conditions

Arborists use hand and power tools, specialized pruning tools and spraying equipment. They must observe safety precautions to avoid injury when working with tools and machinery, and dangerous chemicals. The work involves considerable physical exertion: climbing, bending and twisting, and lifting items weighing up to 25 kilograms.

Arborists generally work in urban settings in crews of two to six people. The work is performed primarily outdoors and, in many cases, work continues throughout the year. Long hours may be required in spring and summer, and after storms and emergencies.

Personal Characteristics

Arborists need the following characteristics:

- the strength, stamina and agility required to climb trees and lift heavy objects
- steady nerves and no fear of heights
- good co-ordination and manual dexterity
- a keen interest in arboriculture (tree care)
- mechanical aptitude
- the ability to communicate with other workers and the public.

They should enjoy operating equipment, analyzing information to determine appropriate treatment methods, and advising and directing the work of others.

Educational Requirements

Education and training requirements for arborists vary. Inexperienced employees who do not have related formal education may start as labourers or grounds workers and learn on the job. High school physics courses are an asset.

At least two or three years of extensive on-the-job training is generally required before an arborist is ready to lead a crew on some tasks. Employers may send employees to one or two day safety training courses on topics such as climbing techniques or aerial rescue.

Arborists should be skilled in the use of ladders, ropes, knots and climbing saddles. Since most emergency response units are not trained to remove an injured person from a tree, arborists should be familiar with aerial rescue and safety techniques.

In Alberta, **Olds College** offers a two year Horticulture diploma program with a specialization in arboriculture. The program provides a general horticultural background with specific courses in tree care, pruning and tree climbing plus on-the-job training. The entrance requirement is a high school diploma with at least 55 per cent in Chemistry 20, Biology 20, and Pure or Applied Math 20 (or equivalent). Previous experience in the industry is desirable but not essential. For current information about the program or mature student admission, please check the Olds College calendar or website.

Related short courses are also available:

- **Landscape Alberta Nursery Trades Association** in Edmonton offers a course in pruning
- **Lakeland College** offers a home study course in pesticide application.

Other Requirements

Arborists require special certification to work on trees near energized power lines. Through Olds College, the Industrial Vegetation Management Association of Alberta provides training for this certification.

Aborists who use pesticides to control pests must hold a Landscape Pesticide Applicator Certificate from Lakeland College.

Arborists who have at least three years of work experience can pursue certification by the International Society of Arboriculture through home study courses.

Employment and Advancement

(section revised JANUARY 2006)

Arborists are employed by:

- municipal, provincial and national parks departments
- firms that contract tree care services to government departments
- utility companies
- large institutions such as universities
- commercial or residential landscape management companies
- tree nurseries.

Advancement is based on the arborist's ability to keep up to date with new developments in the field and willingness to take on greater responsibilities. Arborists who have considerable experience and additional training may advance to technical management positions. Some establish their own companies or work as consultants.

Arborists are part of the larger National Occupational Classification 2225: Landscape and Horticultural Technicians and Specialists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Professional and Technical Services**
- **Agriculture**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,050 Albertans are employed in the Landscape and Horticultural Technicians and Specialists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since arborists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for arborists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Landscape and Horticultural Technicians and Specialists occupational group working part-time or full-time earned from **$14,600 to $83,100 a year.** The average salary was **$39,900 a year.**

© Government of Alberta, Human Resources and Employment

Archaeologist

Produced NOVEMBER 2005

Archaeologists reconstruct, describe and interpret the origin, characteristics and development of human societies and cultures, mainly through the study of archaeological sites and their contents.

NOC Number(s): 4169.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I D M

Duties

Archaeologists may study cultures that existed prior to recorded history, recent societies that have written records, or industrial sites and processes throughout the world. In general, they:

- locate, research and assess sites in search of answers to specific research questions
- excavate sites and record the exact location and condition of artifacts
- study the objects found (e.g. animal bones, plant specimens, metals, tools, texts and sediments)
- conduct laboratory studies
- reconstruct the cultural, economic, physical and intellectual life of past societies and consult with present day members of those societies
- develop theories to explain changes in culture over time
- clean, restore, preserve and prepare artifacts for long term curation
- conserve and manage archaeological sites for future generations
- write reports.

Archaeologists often work closely with researchers in other disciplines. They also may:

- train field staff and volunteers in excavation methods
- authenticate stone, bone, metal and other artifacts
- conduct experiments with replicas of ancient technologies
- conduct research for First Nations communities
- work as curators in museums or interpretive centres
- manage archeological activities for a particular geographic area by issuing permits and reviewing reports
- manage historical resources under government jurisdiction
- evaluate the potential impact of development on archaeological sites
- teach at colleges and universities.

Working Conditions

Some archaeologists work primarily indoors in office, classroom and laboratory environments. Others work outdoors in field environments for at least part of the year. They may travel extensively to survey or excavate archaeological sites.

Field work is usually seasonal. It can be tedious, involving heavy manual labour and extended periods of isolation. Living conditions may be uncomfortable.

Archaeologists may be required to lift and carry materials weighing up to 10 kilograms.

Personal Characteristics

Archaeologists need the following characteristics:

- excellent oral and written communication skills
- good organizational skills
- the ability to analyze problems and think logically
- patience, enthusiasm and the ability to do the required physical labour

- the ability to pay close attention to details
- a good memory for details
- a sensitivity to the needs and problems of co-workers and the local population
- the ability to adapt to changing circumstances.

They should enjoy co-ordinating information and developing innovative approaches, directing the work of others and handling artifacts methodically.

Educational Requirements

The basic educational requirement to work as an archaeologist is a bachelor's degree in archaeology or in anthropology with a specialization in archaeology. To direct an excavation, a master's degree or doctoral (PhD) degree is required (see Other Requirements below). Research positions and teaching positions at the post-secondary level normally require a doctoral degree.

Admission to master's degree programs generally requires an acceptable average in a four year bachelor's degree program (preferably an honours program).

In Alberta, archaeology and anthropology degree programs are offered by the following institutions:

- **Athabasca University** offers three and four year Bachelor of Arts (BA) degree programs in anthropology by distance education. Applicants must be at least 16 years of age.
- The **University of Alberta** in Edmonton offers a four year BA degree program in anthropology with a specialization in archaeology. The entrance requirement is a competitive average of 65 to 80 per cent in English Language Arts 30-1 (or English 30), a 30 level language other than English or Pure Math 30 (or Math 30), and three other approved 30 level subjects (Social Studies 30 recommended). The University of Alberta also offers Master of Arts (MA) and PhD programs in anthropology.
- The **University of Calgary** offers four year BA and Bachelor of Science (B.Sc.) programs in archaeology. The entrance requirement is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 or Math 30 or 31, and three of the following: Biology 30, Chemistry 30, Physics 30, Science 30, Social Studies 30, a 30 level language other than English, one five-credit Grade 12 subject. The University of Calgary also offers MA and PhD degree programs in archaeology.
- The **University of Lethbridge** offers four year BA and Bachelor of Arts and Science programs, and five year combined degree programs in anthropology. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), three other appropriate 30 level subjects and a fifth Grade 12 subject. The University of Lethbridge also offers an MA program in anthropology.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

A permit from the Government of Alberta is required to carry out archaeological research in Alberta. To qualify, archaeologists must have at least a master's degree in anthropology or archaeology, 24 weeks of supervised training in archaeological surveying and excavation techniques, and six weeks of training in curation or laboratory analysis.

Employment and Advancement

(section revised JANUARY 2006)

Archaeologists are employed by:

- museums as curators and exhibit directors
- governments in conservation or research programs or in historic or cultural resource management
- colleges and universities to teach and conduct research
- First Nations communities to conduct research and record culture history
- consulting firms to conduct impact studies and excavations.

Individuals who have a bachelor's degree may be employed on a seasonal contract basis. Those who have master's degrees may find employment as teachers in community colleges, or work in government museums or consulting firms. To pursue independent research in archaeology, teach at the university level or move into senior government positions, a PhD degree is essential.

Archaeologists are part of the much larger National Occupational Classification 4169: Other Professional Occupations in Social Science. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Educational Services**
- **Health Care and Social Assistance**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Other Professional Occupations in Social Science occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since archaeologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for archaeologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Archaeologists' incomes vary considerably depending on the employer and the archaeologists' qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Social Science occupational group working part-time or full-time earned from **$31,800 to $79,600 a year.** The average salary was **$54,900 a year.**

© Government of Alberta, Human Resources and Employment

Architect

Produced MARCH 2005

Architects design building projects and advise clients regarding building projects. They prepare programs, sketches and cost estimates, produce scale construction drawings, write specifications and review on-site construction work.

NOC Number(s): 2151
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I S D

Duties

Architects meet with clients to discuss their needs and desires, visit the proposed building site, analyze requirements, and review land use by-laws and other codes and regulations. Then they prepare sketches of proposed layouts and present them to clients.

Upon client approval of the design concept and budget, architects proceed through design development to the construction document stage. These documents, usually produced on computers, include:

- detailed drawings
- specifications (written instructions for contractors)
- contract documents.

In planning building layouts, architects must keep in mind the space relationships of the interior, structural, electrical and mechanical systems, and current codes and regulations affecting site planning. They prepare estimates of construction costs from information obtained from building contractors. They also may consult with:

- soils engineers and surveyors (hired by clients)
- structural, electrical and mechanical engineers
- urban planners
- landscape architects
- interior designers and kitchen consultants
- cost estimators
- acoustical engineers
- local planning, zoning and building code officials
- contractors
- materials and equipment manufacturers and suppliers.

Architects frequently meet with clients to:

- evaluate designs and discuss concerns
- provide advice concerning building sites, tenders and the selection of contractors
- report on progress and costs
- review plans
- choose materials, finishes and colours.

Architects also may prepare land use studies, and carry out long range land development plans.

Architectural firms must spend a considerable amount of time marketing their work with potential clients to ensure a steady and growing workload of projects. This requires socializing with clients as well as producing brochures and proposals.

Some architects specialize in areas such as:

- programming
- design
- building and construction technology

- specifications writing
- cost estimating
- project management
- arbitration.

Individual architects or architectural firms may choose to specialize in, or become associated with, the design of particular types of buildings:

- residential buildings (e.g. single or multi-family homes, high rise apartments)
- commercial buildings (e.g. office buildings, shopping centres)
- institutions (e.g. churches, schools, hospitals)
- historic/heritage rehabilitation (restoration of older buildings).

Working Conditions

Architects spend most of their time working in offices and meeting with clients, consultants and co-workers. At times, they are required to visit building sites. The pressure of deadlines and unexpected delays can be stressful.

Architects may work anywhere in the world. International work is common for some Canadian firms.

Personal Characteristics

Architects need the following characteristics:

- creative and imaginative
- able to visualize spatial relationships in three dimensions
- good problem solver
- self-motivated
- organized
- good oral and written communicator
- interested and able to pay attention to details
- able to accept criticism
- able to lead and work well with clients and other professionals.

They should enjoy synthesizing information and developing innovative designs, working with people at tasks requiring precision and supervising the work of others.

Educational Requirements

In Alberta, the **University of Calgary** Faculty of Environmental Design offers a four year Master of Architecture program. Applicants must have a bachelor's degree from a recognized university with a grade point average (GPA) of at least 3.0/4 (or equivalent) in the final two years of study and submit a portfolio of their work.

Post-secondary institutions throughout Alberta offer four year bachelor's degree programs. In general, entrance requirements include a high school diploma with a minimum average (60 to 70 per cent, depending on the program) in English 30 or English Language Arts 30-1 and four other suitable Grade 12 subjects such as 30 level science, math, social studies and language courses.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Architects Act, you must be registered with the Alberta Association of Architects (AAA) to practice as an Architect and use the title Architect. If you are not registered with AAA, you may work under the supervision of a registered architect. Licensed interior designers and restricted practitioners may practice architecture on projects of limited scope with AAA approval.

Employment and Advancement

(section revised JANUARY 2006)

Architects may be self-employed or employed by:

- architectural firms
- government agencies
- commercial or industrial organizations
- developers, real estate companies or contractors.

Some architects work on very large projects; others work directly with users on smaller projects. Architects who are self-employed must be good business managers.

Registered architects may become project architects or specifications writers. Experienced architects may become project designers or, if skilled in all stages of architectural design and construction, associates or partners in larger firms. Some architects teach in post-secondary institutions and some do research or pursue careers as writers or critics.

In Alberta, most architects work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,250 Albertans are employed in the Architects occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Architects occupational group working part-time or full-time earned from **$31,000 to $114,700 a year.** The average salary was **$63,100 a year.**

Architectural Technologist

Produced MARCH 2005

Architectural technologists work with architects, engineers and others in designing and developing plans and working drawings, estimating costs and supervising building construction projects.

NOC Number(s): 2251
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M O**

Duties

Architectural technologists implement architects' design concepts by:

- analyzing the technical implications
- assembling the data necessary to complete architectural designs
- using computers to prepare appropriate design and working drawings
- co-ordinating structural, electrical and mechanical designs
- preparing detailed instructions and specifications.

Under an architect's supervision, architectural technologists also may:

- prepare requests for quotations, cost estimates and contracts for projects
- represent the architect on the construction site, conduct site inspections, attend site meetings and prepare meeting notes, and ensure that the builder is complying with design specifications
- instruct site managers or contractors about specific actions needed to correct design problems.

Working Conditions

Architectural technologists generally work in an office environment. Their hours of work may be longer during peak construction periods, and overtime is required to meet deadlines.

Technologists who work directly on construction sites may be required to use scaffolding or ladders, and must follow safety precautions to avoid injury. They may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Architectural technologists need the following characteristics:

- high moral and ethical standards
- precise, persistent and imaginative
- concerned about detail and accuracy
- able to visualize the details of building components in three dimensions and reproduce them in two dimensions
- able to communicate well and work in co-operation with people in the construction industry
- able to work well under pressure to meet deadlines.

They should enjoy analyzing requirements and finding solutions to problems, taking a methodical approach to their work, and working with instruments and equipment at tasks requiring precision.

Educational Requirements

The minimum educational requirement for employment as an architectural technologist is a **diploma related to architectural technology.**

In Alberta, the following institutions offer architectural technology diploma programs:

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Architectural Technology diploma program. The entrance requirement is a high school diploma or equivalent, with English 30

or 33, Pure Math 30 and one of the following: Physics 30 (recommended), Chemistry 30 or Science 30. An interest in and aptitude for applied sciences, especially those with a physics base, are definite assets. This is a quota program so higher marks may be required to gain admission.

- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Architectural Technology diploma program with specializations in architecture and building development. The entrance requirement is a high school diploma or equivalent with English 30 or 33, Pure or Applied Math 30 and a Grade 12 science (or successful completion of the Pre-Careers program at SAIT).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary. The Alberta Association of Architects (AAA) offers affiliate memberships to architectural technologists who have at least two years of work experience under the supervision of a registered or licensed member of the AAA, and pass an exam.

Employment and Advancement

(section revised JANUARY 2006)

Architectural technologists may work for:

- architects
- consulting engineers
- local authorities
- government departments
- building contractors
- surveyors
- building materials and equipment suppliers
- home design and construction companies
- real estate developers
- utilities companies such as hydro-electric, gas, telephone and oil companies.

They may be employed part-time, full-time or on a contract basis.

Architectural technologists usually start out as assistants to architects, other technologists or engineers. Technologists who work with a number of other technologists on a project team may advance to the position of team captain in charge of the production of working drawings and details. Other options include working as specifications writers for consulting firms or becoming self-employed architectural technologists.

Architectural technologists also may work in related fields such as:

- estimating
- building product sales and promotion
- building contracting or maintenance
- building inspection
- real estate
- building component manufacturing
- graphic design
- desktop publishing.

Architectural technologists are part of the National Occupational Classification 2251: Architectural Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the **Professional and Technical Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Professional and Technical Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 750 Albertans are employed in the Architectural Technologists and Technicians occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since architectural technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for architectural technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Architectural Technologists and Technicians occupational group working part-time or full-time earned from **$20,000 to $78,400 a year.** The average salary was **$49,400 a year.**

© Government of Alberta, Human Resources and Employment

Archivist

Produced DECEMBER 2005

Archivists appraise, acquire, arrange, describe, preserve and facilitate the research of records that have ongoing value.

NOC Number(s): 5113
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M I S**

Duties

Archivists select, acquire, maintain and provide access to original documents of ongoing value such as government records, corporate and municipal records, personal papers, and records of associations and businesses. These documents may include textual records, photographs, maps, films, tapes, microforms or computer records.

Duties and responsibilities vary from one position to another but, in general, archivists:

- appraise records based on research into the legal, evidential, financial and historical values of records
- preserve original records and, in some cases, determine whether to keep the original document or transfer the information it contains to another medium such as microfilm, magnetic tape, CD-ROM or optical disc for preservation
- locate valuable records and acquire them for preservation and subsequent research
- arrange and describe archival records to facilitate access to information
- use their knowledge of the extent and availability of relevant sources to provide reference services for sponsoring agencies or the public in general
- preserve materials in their care
- prepare displays and on-line exhibitions to showcase their archives' holdings
- do public relations work for their archives and the profession in general
- supervise the work of assistants and technicians.

Working Conditions

Archivists' working environments vary depending on the size of the institution they work for and the nature of the task at hand:

- When appraising records, archivists work in offices, boardrooms and data processing centres and, sometimes, in storage rooms, warehouses, attics and basements.
- When processing historical materials, they work in an office environment.
- When assisting researchers, they work in an office environment and the archive itself. Temperature and humidity are controlled in most archives. Some archives have dust ventilation systems.

Archivists usually work standard office hours, alone or with other people. When providing reference services, they work with a wide variety of researchers and may be required to work some evenings and weekends.

Personal Characteristics

Archivists need the following characteristics:

- strong organizational and analytical skills
- good communication skills
- good time management skills
- an interest in helping people and preserving the history of the community.

They should enjoy taking a methodical approach to their work, co-ordinating information, and developing innovative solutions to problems.

Educational Requirements

Archivists need:

- well-developed research skills
- a thorough knowledge of the principles and methods of records management and archival work
- computer skills and knowledge related to using information technology for electronic record keeping and preservation
- knowledge of history (particularly Canadian history)
- knowledge of the legal and administrative contexts in which records are created and used.

Since conservators are rarely on staff at archives, archivists also need basic conservation skills and knowledge. Audio/visual archivists require technical knowledge related to the processes and equipment involved with photographs, negatives, film, video and sound archives.

The preferred qualification for archivists is a **master's degree in archival studies**, although many archivists have masters' degrees in history, library science or political science. Candidates who have a Bachelor of Arts (BA) or Bachelor of Science (B.Sc.) degree may be considered if they also have some recognized archives or records management training or extensive experience in those fields.

No master's programs in archival science are offered in Alberta. For information about history, library science and political science degree programs, see the Historian, Librarian and Political Scientist occupational profiles.

Outside of Alberta, the following post-secondary institutions offer two year master's degree programs in archival studies:

- **University of British Columbia**
- **University of Manitoba**
- **University of Toronto**
- **Universite Laval** (instruction in French)
- **L'Universite de Montreal** (instruction in French).

For current information about these programs, prospective students should refer to the appropriate university calendar or website.

Employment and Advancement

(section revised JANUARY 2006)

In Alberta, archivists are employed by:

- provincial government archives
- municipal archives
- university archives
- regional archives
- community archives
- private business and religious archives.

Archivists also may work in records management in organizations such as oil companies and government departments, or have responsibilities related to freedom of information and protection of privacy legislation.

In Alberta, most people employed as archivists work in the following industries:

- **Information, Culture and Recreation**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 50 Albertans are employed in the Archivists occupational group which is expected to grow up to 0.9 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Employment prospects are best for archivists who are willing to work on a contract basis.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Archivists occupational group working part-time or full-time earned from **$26,700 to $63,700 a year.** The average salary was **$53,000 a year.**

Assessor

Produced DECEMBER 2005

Assessors determine the value of land, buildings, businesses, structures and certain types of equipment for property tax purposes.

NOC Number(s): 1235.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M d s**

Duties

In general, assessors:

- inspect properties of all types including single family residences, apartment buildings, shopping centres, recreational facilities, hotels, office buildings, farm land, petroleum and other industrial sites and facilities
- collect and analyze information (including statistical data) relating to the value of property or businesses (for example, information about sales or rental income, construction methods and costs, market conditions)
- classify and estimate property values according to assessment legislation using valuation techniques (mass appraisal) and data.
- maintain the municipal assessment roll
- explain assessed values to property owners and defend them at Assessment Review Board and Municipal Government Board hearings.

Assessors must understand and keep current with legislation, regulations, Minister's guidelines and bylaws regarding property assessment and taxation.

Working Conditions

Assessors work in offices and in the field, and may be required to travel extensively particularly in rural areas. Occasionally, they work long and irregular hours to meet deadlines and attend meetings.

Personal Characteristics

Assessors need the following characteristics:

- mature judgement
- initiative and motivation
- excellent oral and written communication skills
- the ability to get along well with all types of people
- the ability to do detailed work
- the ability to make decisions and accept responsibility for them
- the ability to handle stress.

They should enjoy analyzing data, taking a methodical approach to their work, making decisions and working with people.

Educational Requirements

Assessor trainees acquire the necessary experience, knowledge and skills through **a combination of formal education and field experience** under the supervision of an experienced assessor. Most assessors have at least two years of post-secondary education in a related field such as economics, business administration or agriculture. However, those who do not have post-secondary education can satisfy education requirements through distance learning programs. Computer, math and communication skills are essential.

In Alberta, **Lakeland College** in Vermilion offers a two year Appraisal and Assessment diploma program. The entrance requirement is a high school diploma with at least 50 per cent in English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33) and 55 per cent in Pure Math 30 or Math 30 (or 65 per cent in Applied Math 30 or Math 33). Pure Math 30 or Math 30 is recommended. This program has been designed specifically for the **Alberta Assessors Association** and, upon successful completion, graduates receive advanced standing towards the Association's Accredited Municipal Assessor of Alberta (AMAA) designation.

The **University of British Columbia** offers an 11 course Diploma in Urban Land Economics distance education program. This program also meets AMAA core education requirements.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Accredited Municipal Assessor of Alberta is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Accredited Municipal Assessor of Alberta, you must be a registered member of the Alberta Assessors' Association (AAA). You do **not** have to be registered if you do not call yourself an Accredited Municipal Assessor of Alberta.

Employment and Advancement

(section revised JANUARY 2006)

In Alberta, municipalities are the primary employers and contractors of assessment services. Small towns and municipalities often use the assessment services of private companies. Larger municipal districts, counties and metropolitan centres may have their own assessment staff.

Assessors also may be employed by Alberta Municipal Affairs, become company tax representatives or move into related appraisal fields.

Assessors are part of the larger National Occupational Classification 1235: Assessors, Valuators and Appraisers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Finance, Insurance and Real Estate**
- **Public Administration**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,350 Albertans are employed in the Assessors, Valuators and Appraisers occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since assessors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for assessors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Many assessors work on a contract basis so their earnings may vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Assessors, Valuators and Appraisers occupational group working part-time or full-time earned from **$27,800 to $123,100 a year.** The average salary was **$64,800 a year.**

Astronomer

Produced JANUARY 2006

Astronomers conduct observational and theoretical research to broaden our knowledge of energy, matter and natural processes throughout the universe and particularly beyond Earth.

NOC Number(s): 2111.2
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Theoretical astronomers use mathematics and physics to formulate explanations for the observed properties of the universe and objects in it, and make predictions by solving mathematical equations or using sophisticated computer simulations. Predictions are tested through further observation.

Observational astronomers use a variety of ground-based and space-borne telescopes and scientific instruments to make observations of and obtain data on astronomical objects. Basic properties such as composition, mass, size, brightness, motion and distance may be measured to test hypotheses about the nature of the universe and matter in it.

Some astronomers are based at major observatories and research institutions where, in addition to their own research activities, they plan and help implement new instruments and techniques. They also help other astronomers use instruments operated by their institutions. In addition to academic research skills, astronomers in this area need to be experts in aspects of observatory and instrument engineering and computer techniques.

All aspects of modern astronomy are highly technical involving the use of state-of-the-art telescopes and detectors, and computers for instrument control, data gathering and subsequent processing and analysis.

Most astronomers connected with universities have teaching responsibilities and are expected to produce original research work for publication in scientific journals.

Working Conditions

Astronomers work in a variety of settings. Observational work requires unconventional hours and a considerable amount of travelling. Sometimes astronomers work at high altitudes in remote areas where weather conditions can be extreme.

Personal Characteristics

Astronomers need the following characteristics:

- an aptitude for physics and mathematics
- the ability to pay close attention to detail
- the ability to work with others as members of a team
- imagination and a capacity for reflection and contemplative study
- public speaking, writing and computer skills
- patience
- curiosity.

They should enjoy synthesizing information and finding innovative solutions to problems, using sophisticated instruments and equipment to perform tasks requiring precision, and supervising the work of others.

Educational Requirements

A four year Bachelor of Science (B.Sc.) degree in astronomy, astrophysics or physics is the minimum qualification for work in technical positions in observatories, planetaria and science centres. Further, knowledge of chemistry and biology can be helpful in many areas of modern astronomy.

A Master of Science (M.Sc.) degree is required for most research assistant positions. A doctoral (PhD) degree is needed for university teaching and most federal government research positions. Most astronomers who have doctoral degrees work as post-doctoral fellows before finding permanent employment.

In Alberta, the following institutions offer four year degree programs in physics or astrophysics:

- The **University of Alberta** in Edmonton offers four year B.Sc. general and honours programs in physics with specializations in geophysics, mathematical physics and physics, and M.Sc. and PhD programs in physics (including astronomy). The entrance requirement for the bachelor's degree program is a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Physics 30 and two approved Grade 12 subjects (Math 31 recommended). The University of Alberta in Camrose also offers a degree program in physics.
- The **University of Calgary** offers a four year B.Sc. program, and M.Sc. and PhD programs in physics with specializations in astrophysics. The entrance requirement for the bachelor's degree program is a high school diploma with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Chemistry 30 and two other Grade 12 subjects selected from approved lists (Math 31 and Physics 30 recommended).
- The **University of Lethbridge** offers a four year B.Sc. degree program, combined degree programs and M.Sc. and PhD degree program in physics. The entrance requirement for the bachelor's degree program is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), Physics 30, Pure Math 30 (or Math 30, or Applied Math 30 and at least 75 per cent in the University of Athabasca's Math 101 course), Biology 30 or Chemistry 30, and one other Grade 12 subject (Math 31 recommended).

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the insitution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Astronomers may work in:

- post-secondary institutions
- government agencies and observatories
- planetaria and science centres.

Some find employment in related industries such as aerospace, communications, computer or other high-tech fields.

Permanent positions are scarce, especially in research, and competition for advancement is keen. However, opportunities exist for two to three year post-doctoral positions at universities and research institutions around the world.

Astronomers are part of the larger National Occupational Classification 2111: Physicists and Astronomers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 100 Albertans are employed in the Physicists and Astronomers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since astronomers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for astronomers.)

Note: University professors are classified in a different occupational group. For more information, see the University Professor occupational profile.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for university positions vary with:

- personal qualifications
- academic qualifications
- administrative responsibilities
- the particular faculty and university.

Athletic Therapist

Produced MARCH 2005

Athletic therapists work with other health care professionals to advise athletes and coaches on the prevention and treatment of sports injuries, or treat members of the public who have musculoskeletal injuries.

NOC Number(s): 3144
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **S I M**

Duties

Athletic therapists help athletes maintain and improve their athletic capabilities. For example, to treat sports injuries, they may use techniques such as:

- hydrotherapy (therapeutic use of water)
- cryotherapy (therapeutic use of cold)
- electrotherapy (therapeutic use of electricity)
- hands-on treatment (muscle energy, massage)
- therapeutic exercise, conditioning and flexibility training.

In general, athletic therapists perform all or some combination of the following duties:

- develop training programs designed to improve athletic performance
- plan and implement or supervise injury-prevention programs that may include stretching exercises prior to competitions, taping or applying devices such as braces
- conduct an immediate assessment when athletes are injured and provide emergency care or administer first aid
- screen sport and non-sport related injuries or syndromes
- develop and implement rehabilitation programs for musculoskeletal injuries
- help athletes maintain strength and flexibility in uninjured muscles
- assess and report the progress of recovering athletes to coaches and physicians
- perform general administrative duties such as monitoring budgets and supervising staff and student therapists.

Working Conditions

Athletic therapists who work with teams work long, hard and physically demanding hours. They must be present at all competitions and practices. Depending on the sport, this may require frequent travel or evening and weekend work.

Hours of work and working conditions for athletic therapists who work in private practice vary depending on the clinic.

Personal Characteristics

Athletic therapists need the following characteristics:

- good manual dexterity
- physical stamina
- excellent interpersonal and team work skills including sensitivity to the needs of others, patience, tact and persuasive abilities
- the ability to think creatively
- the ability to work effectively in stressful situations.

They should enjoy working with people, designing innovative therapy programs and using equipment to implement treatment plans.

Educational Requirements

Athletic therapists must have a **university degree in athletic therapy** accredited by the Canadian Athletic Therapists' Association.

In Alberta, the **University of Calgary** offers a four year Bachelor of Kinesiology program with a major in athletic therapy in collaboration with **Mount Royal College**. The entrance requirement is a high school diploma with an average of at least 70 per cent in English 30, Chemistry 30, Math 30, Biology 30 and one other 30 level course.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Athletic therapists must be certified by the Canadian Athletic Therapists Association (CATA). Certification requires a 1200 hour practicum and successful completion of a theoretical and practical examination.

Employment and Advancement

(section revised JANUARY 2006)

Athletic therapists may be employed by:

- sports teams and clubs
- post-secondary institutions
- private clinics.

They may work in conjunction with other health care workers such as chiropractors, massage therapists or physiotherapists.

Athletic therapists are part of the larger National Occupational Classification 3144: Other Professional Occupations in Therapy and Assessment. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 750 Albertans are employed in the Other Professional Occupations in Therapy and Assessment occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since athletic therapists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for athletic therapists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for certified athletic therapists vary greatly. Often, athletic therapists work on a term contract basis.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Professional Occupations in Therapy and Assessment occupational group working part-time or full-time earned from **$21,400 to $78,500 a year.** The average salary was **$38,700 a year.**

© Government of Alberta, Human Resources and Employment

Auctioneer

Produced OCTOBER 2003

Auctioneers arrange auction sales, evaluate goods and property, conduct bidding and sell items to the highest bidders.

NOC Number(s): 6411
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M d**

Duties

Auctioneers sell livestock, industrial machinery, cars, trucks, antiques, real estate, art, furniture and merchandise of all kinds. In general, they:

- evaluate goods before a sale
- arrange and display goods in lots according to similarity and appraised value
- prepare descriptive lists of goods
- advertise the date, time and location of auctions
- conduct sales by describing goods and requesting bids
- maintain the interest of prospective buyers to encourage higher bids
- endeavour to sell goods at fair market value
- sell to the highest bidders
- conclude sales by recording the names and addresses of purchasers and their bids
- disburse monies ethically.

Working Conditions

Auctioneers work both indoors and outdoors in all weather conditions. Those in the agricultural field spend much of their time in auction marts or farm yards. A certain amount of travel is required and hours may be long when sales are running.

Personal Characteristics

Auctioneers need the following characteristics:

- a strong, clear voice
- fluency in their use of words
- a patient but firm manner
- good business sense
- good health and physical stamina to prepare for an auction and keep up a brisk pace during an auction.

They should enjoy working with people, compiling information and supervising the work of others.

Educational Requirements

(section revised MARCH 2005)

Auctioneers must have a working knowledge of the usefulness and current market values of the types of merchandise they sell. It is possible to learn by working as an auction employee but training positions are often hard to obtain.

In Alberta, auctioneers must have graduated from a two week course offered by an accredited auction school or have worked as an auctioneer in another jurisdiction for at least one year. The following private vocational schools offer training programs:

- The **Auctioneering College of Canada** in St. Albert. The entrance requirement is a high school diploma or equivalent.

- The **International School of Auctioneering** in Red Deer. The entrance requirement is a high school diploma or equivalent.
- The **Western Canadian School of Auctioneering** in Leduc. Applicants must be at least 18 years of age and have a high school diploma or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Setting up and maintaining a successful auction business requires business, appraisal and marketing skills, as well as skill in bid calling. Training or experience in business administration is a definite asset.

Employment and Advancement

Auctioneers may be employed by auction marts and auction rooms, or be self-employed. Many auction businesses are family-owned operations and openings for new employees are limited.

Self-employed auctioneers should have financial backing in place before advertising their services. They are required to set up a licensed auction sales business and post a $25,000 bond.

Success depends on the reputations auctioneers build in their communities.

Salary

(section revised OCTOBER 2005)

Auctioneers may be paid a regular wage or work on a commission basis. Their earnings vary tremendously depending on the type of auction, the current economic situation and the reputation of the auctioneer. Those setting up their own businesses may work in other occupations to provide an additional source of income until they have established a good reputation in the auction sales industry.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Sales Representatives - Wholesale Trade (Non-Technical) occupational group working part-time or full-time earned from **$12,000 to $195,300 a year.** The average salary was **$47,800 a year.**

Audiologist

Produced DECEMBER 2004

Audiologists work with children and adults to prevent, assess, diagnose and provide treatment and counselling for hearing and balance disorders.

NOC Number(s): 3141.1
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I S**

Duties

Audiologists may specialize in working with a particular age group (e.g. infants, preschoolers, the elderly) or work with people of all ages. In general, they:

- use specialized instruments and electronic equipment to test and measure hearing abilities
- determine the degree, type and location of hearing problems
- recommend, select, fit and teach clients how to use appropriate assistive listening devices (e.g. hearing aids, telephone adaptors, visual alarms)
- plan and implement management programs (e.g. auditory training, instruction in speech reading)
- help parents and others (e.g. teachers, employers) facilitate communication for people who have hearing impairments
- maintain client records
- consult with and advise other health professionals.

Audiologists often work in teams with speech-language pathologists, physicians, psychologists, social workers, nurses, teachers, occupational therapists or physical therapists. For example, teams may be involved in the assessment and rehabilitation of hearing abilities through the prescription of hearing aids, speech reading instruction or teaching strategies. Or they may be involved in studying and improving measures for hearing conservation in work, school and leisure settings.

Some audiologists:

- develop and supervise hearing screening programs
- work with clients who have problems with balance
- educate and supervise students, professionals and support personnel in a variety of work settings
- participate in research related to hearing and balance
- work in the hearing aid manufacturing and sales industries
- teach in universities and colleges.

Working Conditions

Audiologists generally work standard weekday office hours. They may work with individual clients or groups of clients in private practice clinics, community health centres, rehabilitation centres, hospitals or schools. Those in the hearing aid manufacturing and sales industries work primarily with other audiologists.

Personal Characteristics

Audiologists need the following characteristics:

- excellent communication and interpersonal skills
- the intellect and perseverance required to complete the training
- sensitivity to client needs
- the ability to concentrate and pay close attention to details
- an appreciation for precision instrumentation

- the ability to work in a team environment.

They should enjoy working with people, exploring problems in depth and operating equipment.

Educational Requirements

In Canada, the education requirement for audiologists is a **master's degree in audiology.** Admission to master's degree programs generally requires an acceptable average in a four year bachelor's degree program with specified courses.

In Canada, master's degree programs in audiology are offered by:

- **University of Western Ontario** in London
- **University of British Columbia** in Vancouver
- **Dalhousie University** in Halifax
- **University of Montreal** (instruction in French)
- **University of Ottawa** (instruction in French).

An internship in a hospital, private hearing clinic, rehabilitation centre or health care facility is required before graduation.

Universities and colleges throughout Alberta offer bachelor's degree programs that can provide suitable preparation for a master's degree program in audiology. Admission requirements for bachelor's degree programs vary from one post-secondary institution and program to another but generally include a high school diploma with an average of at least 60 per cent (sometimes 70 per cent) in English 30, Pure Math 30 or Math 30, Biology 30 and two other appropriate 30-level subjects. Before enrolling in a program, prospective students should consult the institutions offering master's degree programs regarding course requirements.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Health Professions Act and Speech-Language Pathologists and Audiologists Profession Regulation, registration with the Alberta College of Speech-Language Pathologists and Audiologists (ACSLPA) is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members, who are authorized by the College, provide restricted activities specified in the Regulation. Only registered members may call themselves Audiologists.

Employment and Advancement

(section revised JANUARY 2006)

Most audiologists are employed as clinicians by:

- private practice offices
- hospitals
- schools
- community health centres.

Some are employed as:

- researchers in hospitals, universities and government agencies (a PhD is usually required)
- administrators of speech and hearing programs
- sales representatives for hearing aid companies (for more information, see the Technical Sales Representative occupational profile).

Private practice fees are not covered by Alberta Health Care Insurance but many private insurance plans, as well as other sources of government funding, cover some services and products.

Audiologists are part of the larger National Occupational Classification 3141: Audiologists and Speech-Language Pathologists. In Alberta, people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Educational Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 900 Albertans are employed in the Audiologists and Speech-Language Pathologists occupational group which is expected to grow 3.0 to 4.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since audiologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for audiologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Audiologists and Speech-Language Pathologists occupational group working part-time or full-time earned from **$15,300 to $70,100 a year.** The average salary was **$60,400 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Auto Body Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Auto body technicians repair, replace and refinish damaged motor vehicle structures and body parts, and interior and exterior finishes.

NOC Number(s): 7322
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O M i

Duties

In Alberta, people in this occupation may be certified as auto body:

- preppers
- repairers
- refinishers
- technicians.

Auto body preppers do surface preparation, minor damage repairs, masking and priming. They may:

- apply anti-corrosion compounds while vehicles are still mounted on frame repair equipment
- identify and prepare substrate mechanically (with abrasives) or chemically
- mix and apply a sequence of undercoat products and ensure chemical compatibility, adhesion and durability
- remove and install bolt-on components such as hoods, decklids, fenders, trim, doors, glass and interior items.

Auto body repairers do damage appraisals, frame and unibody structural repairs, body sheet-metal work, plastic repairs, component replacement and alignment. They may:

- repair supplemental restraint system (e.g. air bags and seat belts)
- restore the structural integrity of damaged vehicles by cutting away damaged components and welding in new or recycled replacements
- remove and install bolt-on components such as hoods, decklids, fenders, trim, doors, glass and interior items
- ensure driver and passenger protection by verifying dimensional accuracy and system functionality for all repairs
- test drive vehicles to ensure proper alignment and handling.

Auto body refinishers do damage appraisals, surface preparation, minor damage repairs, masking, colour matching, priming and top coating. They may:

- apply anti-corrosion compounds while vehicles are still mounted on frame repair equipment
- identify and prepare substrate mechanically (with abrasives) or chemically
- mix and apply a sequence of undercoat products and ensure chemical compatibility, adhesion and durability
- match colours accurately
- remove and install bolt-on components such as hoods, decklids, fenders, trim, doors, glass and interior items.

Auto body technicians often specialize in damage appraisal, frame straightening, preparation, sheet metal work, painting, or plastics. They may:

- prepare or review motor vehicle repair estimates
- use frame machines to straighten bent frames and unitized bodies
- remove badly damaged sections of vehicles such as trunk lids, roof and rear body panels and weld in new sections
- work out minor damage in body panels, fenders, skirting and sheet metal trim, and weld torn metal
- cover bumpers, windows and trim with masking tape and paper in preparation for painting
- apply primers with spray guns
- clean and smooth out surfaces and apply paint
- repair or replace interior and exterior components such as instrument panels, seat frame assemblies, carpets,

floorboards, trim panels and moldings
- inspect vehicles for dimensional accuracy and test drive them to ensure proper alignment and handling.

Working Conditions

All types of auto body technicians work indoors in a noisy, sometimes dusty, environment. They generally work a 40-hour, five-day week with occasional overtime. There is some risk of injury when working with sharp metals, power tools and exposure to dust and fumes.

Auto body technicians may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Auto body technicians need the following characteristics:
- physical strength and stamina
- manual dexterity
- creativity, patience and an eye for detail
- good colour vision
- the ability to keep up to date with changing technology
- good customer services skills
- commitment to safe work habits.

They should enjoy doing precision work and creative decision-making.

Educational Requirements

To work in Alberta, auto body technicians must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:
- have at least Alberta Grade 10 with five credit courses in English language arts, math, science and social studies (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** for auto body:
- **preppers** is two years (two 12-month periods) that include a minimum of 1,600 hours of on-the-job training with four weeks of technical training in the first year and a minimum of 1,800 hours on-the-job training in the second.
- **repairers** is three years (three 12-month periods) that include a minimum of 1,600 hours of on-the-job training with four weeks of technical training in the first year and a minimum of 1,500 hours of on-the-job training and seven weeks of technical training in the second and third. (Prepper training is included.)
- **refinishers** is two years (two 12-month periods) that include a minimum of 1,600 hours of on-the-job training with four weeks of technical training in the first year and a minimum of 1,600 hours of on-the-job training and six weeks of technical training in the second. (Prepper training is included.)

The **auto body technician** branch does not have an apprenticeship program. Individuals who complete both the repairer **and** refinisher apprenticeship training qualify for certification as an auto body technician.

High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Only **auto body refinishers** and **auto body technicians** apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:
- the Northern Alberta Institute of Technology (NAIT) in Edmonton
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Auto Body Repair certificate program. The entrance requirement is Grade 10 with English, math and a science.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Auto body technicians are employed by auto body repair shops, automobile and truck dealerships, custom shops and sometimes by trucking companies and buslines.

Experienced auto body technicians may advance to supervisory positions, start their own businesses or become automobile damage appraisers for insurance companies. Alberta certified journeyman auto body technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Auto body technicians are part of the larger National Occupational Classification 7322: Motor Vehicle Body Repairers. In Alberta, over 75 per cent of people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,350 Albertans are employed in the Motor Vehicle Body Repairers occupational group which is expected to grow 0.8 to 1.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since auto body technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for auto body technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice **auto body preppers** earn at least 55 per cent of the journeyman wage in their place of employment in the first year and 70 per cent in the second.

Apprentice **auto body repairers** earn at least 55 per cent of the journeyman wage in their place of employment in the first year, 70 per cent in the second and 80 per cent in the third.

Apprentice **auto body refinishers** earn at least 55 per cent of the journeyman wage in their place of employment in the first year and 70 per cent in the second.

According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates for the branches may vary, but generally range from **$17 to $26 an hour plus benefits** (2006 estimate). Top earners (with the exception of auto body preppers), based on performance, proficiency and region of employment can earn upwards of **$70,000 annually**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Motor Vehicle Body Repairers occupational group working part-time or full-time earned from **$17,200 to $90,800 a year.** The average salary was **$42,500 a year.** Albertans employed as auto body repairers/painters working part-time or full-time earned from **$19,400 to $91,000 a year.** The average salary was **$43,700 a year.**

Auto Detailer

Produced JANUARY 2004

Auto detailers clean and refurbish the interiors and exteriors of automobiles.

NOC Number(s): 6662.5
Minimum Education: Less than high school
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M d**

Duties

Auto detailers make cars and trucks look as new as possible for automobile owners, car dealerships, car rental services and insurance companies. Duties and methods vary but, in general, auto detailers:

- hand wash and wax vehicles
- clean the undercarriage, engine, tires, chrome and aluminum parts, upholstery, vinyl and leather
- use air compressors and other tools to clean vents and other small places that gather dust
- vacuum and shampoo carpets
- remove stains.

Experienced auto detailers may also touch up chipped paint, tint windows and repair or replace upholstery.

Working Conditions

Auto detailing is repetitive, physically demanding work. Lifting items that weigh up to 10 kilograms is routinely required.

Personal Characteristics

Auto detailers need the following characteristics:

- the ability to lift and carry heavy equipment such as polishers and buffers
- the ability to repeatedly stoop, kneel, crouch and work in awkward positions
- the ability to pay close attention to details.

They should enjoy operating specialized cleaning equipment and taking a methodical approach to cleaning vehicle interiors and exteriors.

Educational Requirements

There are no standard education requirements for auto detailers but employers generally prefer to hire applicants who have related experience or a high school diploma. Basic reading and arithmetic skills are required.

Auto detailers are **trained on the job** and through short courses offered by auto and car-care product manufacturers. To make vehicles shine without causing damage in the process, auto detailers must be able to select and use appropriate cleaning agents, solvents and equipment. They usually start with simpler tasks and may take on more complex work as they gain knowledge and experience.

Employment and Advancement

(section revised JANUARY 2006)

Auto detailers are employed by car washes and shops that specialize in auto detailing. Employment is often seasonal in Alberta.

Experienced auto detailers may advance to supervisory positions or move into installing auto accessories (for more informaton, see the Automobile Accessories Installer occupational profile). Those who have the required entrepreneurial skills may start their own businesses.

Auto detailers are part of the larger National Occupational Classification 6662: Specialized Cleaners. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Management, Administrative and Other Support Services**
- **Retail Trade**
- **Transportation and Warehousing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,450 Albertans are employed in the Specialized Cleaners occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since auto detailers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for auto detailers.)

There is a relatively high employment turnover rate in this occupation so demand for new workers is fairly steady. However, there are often many applicants for vacant positions.

Salary

(section revised OCTOBER 2005)

Auto detailers may be paid an hourly wage or per job/vehicle.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Specialized Cleaners occupational group working part-time or full-time earned from **$12,500 to $152,100 a year.** The average salary was **$28,700 a year.**

Auto detailers' incomes are usually at the lower end of this range.

Automated Systems Technologist

Produced JULY 2004

Automated systems technologists analyze, implement, maintain and design electro-mechanical (automated) systems. These systems often include mechanical components, sensors, actuators and control systems and may include stationary or mobile robots.

NOC Number(s): 2232.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M**

Duties

Automated systems technologists are involved in the integration of electrical, mechanical and computer systems to automate and control industrial processes. For example, they may work with:

- computer controlled manufacturing equipment
- industrial machines that perform automated tasks such as spot welding auto bodies, loading or unloading presses, spray painting, sorting items or cutting cloth with lasers.

Working in collaboration with manufacturing engineers and other professionals, automated systems technologists:

- design and install automated cells or systems
- design and assemble printed circuit boards
- program industrial controls
- calibrate and maintain control systems
- supervise the assembly of automated systems
- plan production operations and facilities
- integrate automated equipment into existing manufacturing systems
- keep records, compile information and write reports.

Working Conditions

Automated systems technologists work in offices and laboratories, and on the production floor in industrial environments. They may work standard weekday hours or shifts, and may be required to work overtime to meet deadlines or repair faulty equipment. Safety precautions must be observed when working in the potentially hazardous surroundings of a manufacturing plant.

Lifting up to 25 kilograms may be required.

Personal Characteristics

Automated systems technologists need the following characteristics:

- an aptitude for mechanics and electronics
- patience and creative problem-solving ability
- manual dexterity
- good colour perception
- intellectual curiosity
- good communication skills.

They should enjoy doing precise work, analyzing test results and finding innovative solutions to problems.

Educational Requirements

The minimum educational requirement to work as an automated systems technologist is a **related two year diploma** of technology.

In Alberta, the **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Automated Systems Engineering Technology diploma program. The admission requirement is a high school diploma with English 30 or 33 and Pure Math 30 or successful completion of the Pre-Careers program at SAIT. Physics 20 is recommended.

For information about related technical programs of study offered in Alberta, see the Electronics Engineering Technologist and Mechanical Engineering Technologist occupational profiles.

In British Columbia, the **British Columbia Institute of Technology (BCIT)** School of Engineering Technology in Burnaby offers a four-term Robotics (Automation) Technology diploma program. The admission requirement is a high school diploma with Grade 12 English and at least a C+ in Grade 12 math and Grade 11 physics.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary. The Alberta Society of Engineering Technologists (ASET) offers certification for graduates of recognized education programs who have two years of successful experience in industry.

Employment and Advancement

(section revised JANUARY 2006)

Automation systems technologists are employed by:

- automated systems integrators
- manufacturers of consumable goods (e.g. electronics, metal or plastic products producers, food and beverage processors)
- heating, ventilation and air conditioning (HVAC) companies
- the armed forces
- research institutes.

They may also be employed as technical sales representatives (for more information, see the Technical Sales Representative occupational profile).

With experience and initiative, automated systems technologists may advance to supervisory positions.

Automated systems technologists are part of the larger National Occupational Classification 2232: Mechanical Engineering Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,750 Albertans are employed in the Mechanical Engineering Technologists and Technicians occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since automated systems technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for automated systems technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Mechanical Engineering Technologists and Technicians occupational group working part-time or full-time earned from **$24,400 to $100,500 a year.** The average salary was **$67,000 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

Automobile Accessories Installer

Produced SEPTEMBER 2003

Automobile accessories installers install accessories such as heaters, audio systems, security systems, lights, antennas, upholstery and truck box liners.

NOC Number(s): 9482.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

Automobile accessories installers may specialize in the type of vehicle they work on or the types of accessories they install. For example, they may work primarily on cars, trucks, vans, commercial vehicles or motor homes, or they may specialize in installing one or more types of after-market accessories:

- alarm, remote starter, audio or other electronic systems
- mirrors, truck running boards, spoilers, etc.
- film for tinting windows
- upholstery.

Duties and responsibilities vary from one position to another but, in general, accessories installers:

- remove vehicle interior parts if necessary
- drill and tap holes to mount accessories
- bolt, screw, clip, weld, solder or otherwise fasten parts and components together
- assemble and fit accessories to vehicles
- position and install parts and subassemblies
- reinstall vehicle interior parts as required
- maintain their equipment and keep their work environments clean.

They may also keep records, compute charges for labour and materials, and deal directly with customers.

Electronic systems installers install, diagnose and repair audio, alarm and other electronic devices. They study circuit diagrams, test wiring and other components to locate defects and replace defective parts.

Upholstery installers measure, cut and sew materials for upholstery and covers. They may also adjust or replace seat springs.

Working Conditions

Most automobile accessories installers work a 40-hour, five-day week. Some evening, weekend or holiday work may be required. The work is sometimes noisy and dirty, and there is some risk of injury involved in working with power tools and near exhaust gases.

Some installers are routinely required to lift items that weigh up to 25 kilograms.

Personal Characteristics

Automobile accessories installers need the following characteristics:

- good eyesight and manual dexterity
- mechanical interest and aptitude
- good communication skills
- good organizational skills
- the ability to visualize three-dimensional objects and analyze problems
- a willingness to keep up to date with changing technology.

They should enjoy using power tools and operating equipment, taking a methodical approach to their work, and fitting and adjusting parts.

Educational Requirements

Automobile accessories installers are **trained on the job**. Employers generally prefer to hire applicants who already have some related education or experience. For example, installers who build wood truck box liners and tool boxes should know how to use table saws and wood tools safely.

Electronic systems installers must be familiar with 12-volt electrical systems. High school math, physics and electronics courses and **Mobile Electronics Certification Program (MECP) training** are definite assets.

Trainees may be expected to provide their own hand tools.

Employment and Advancement

(section revised JANUARY 2006)

Automobile accessories installers are employed by automotive specialty shops.

Experienced installers may advance to service manager or shop forman positions. Some start their own businesses or purchase existing businesses.

Automobile accessories installers are part of the larger National Occupational Classification 9482: Motor Vehicle Assemblers, Inspectors and Testers. In Alberta, over 75 per cent of people employed in this classification work in the **Other Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Other Manufacturing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 450 Albertans are employed in the Motor Vehicle Assemblers, Inspectors and Testers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since automobile accessories installers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for accessories installers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Motor Vehicle Assemblers, Testers and Inspectors occupational group working part-time or full-time earned from **$16,000 to $82,200 a year.** The average salary was **$31,700 a year.**

Automotive Service Technician

Produced FEBRUARY 2006

Automotive service technicians perform preventative maintenance, diagnose faulty operations and repair automotive vehicles and light trucks.

NOC Number(s): 7321.1
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Automotive service technicians adjust, test and repair engines, steering systems, braking systems, drive trains, vehicle suspensions, electrical systems and air-conditioning systems and do wheel alignments. In large shops, they sometimes specialize in repairing, rebuilding and servicing specific parts such as braking systems, suspension and steering systems. In smaller shops, they may work on a wider variety of repair jobs.

Duties vary from one position to another but, in general, automotive service technicians:

- determine the problem by reading the work order, examining the vehicle, using testing equipment or taking the vehicle for a test drive
- dismantle faulty assemblies and repair or replace worn or damaged parts
- reassemble, adjust and test the repaired mechanism.

Automotive service technicians may also:

- perform scheduled maintenance services such as oil changes, lubrications and tune ups
- advise customers on work performed, general vehicle conditions and future repair requirements.

Working Conditions

Most automotive service technicians work a 40-hour, five-day week. Some evening, weekend or holiday work may be required. The work is sometimes noisy and dirty. There is some risk of injury when working with power tools and exposure to exhaust gas fumes.

Technicians may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Automotive service technicians need the following characteristics:

- good hearing, eyesight and manual dexterity
- mechanical aptitude and interest
- the ability to keep up to date with changing technology.

They should enjoy doing precision work and working independently.

Educational Requirements

To work in Alberta, automotive service technicians must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least English Language Arts 20-2, Applied Math 20 or Math 23 and Science 10 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. A working knowledge of electricity, electronics and computers is an asset.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Apprentices are required to provide their own tools.

Applicants who have related training or work experience may be eligible for credit or certification.

Automotive service technician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Lakeland College in Vermilion
- Lethbridge Community College
- Medicine Hat College
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Fairview
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **Lethbridge Community College** offers a one year Automotive Systems certificate program. The entrance requirements are Applied Math 30, Pure Math 30 and English Language Arts 30-1, 30-2 or equivalent.
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Automotive Mechanic certificate program. The entrance requirement is Grade 10 with English, math and science. Preference may be given to those who also have automotive experience. NAIT also offers a 32-week General Mechanic certificate of achievement. Applicants require English 10 or a Grade 11 English and Math 10 or a Grade 11 Math or equivalent.
- **Red Deer College** offers a one year Automotive Service certificate. The entrance requirement is Pure Math 10, Applied Math 20 or Math 23 and English 10, 23 or equivalent.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Automotive Service Technology diploma program. The entrance requirement is a minimum of 70 Alberta high school credits (Grade 11) with Pure Math 20, Applied Math 20 or Math 23, a Grade 11 English and a Grade 11 science. All applicants are required to write a mechanical reasoning test.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Automotive service technicians are employed by automotive repair shops, specialty repair shops, service stations, car and truck dealerships and by large organizations that own fleets of vehicles.

Experienced automotive service technicians may advance to service manager or shop foreman positions. Alberta certified journeyman automotive service technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training. Some automotive service technicians open their own repair facilities.

Automotive service technicians are part of the larger National Occupational Classification 7321: Automotive Service Technicians, Truck Mechanics and Mechanical Repairers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 15,450 Albertans are employed in the Motor Vehicle Mechanics, Technicians and Mechanical Repairers occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 330 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since automotive service technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for automotive service technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice automotive service technicians earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second, 80 per cent in the third and 90 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$20 to $24 an hour plus benefits** (2006 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Automotive Service Technicians occupational group working part-time or full-time earned from **$15,000 to $113,500 a year.** The average salary was **$48,600 a year.**

Avionics Technologist

Produced JUNE 2004

Avionics technologists modify, install, maintain and repair electronic equipment used in aviation.

NOC Number(s): 2244.3
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M i

Duties

Avionics include electrical, electronic and instrumentation systems on aircraft.

Avionics technologists work closely with other aircraft maintenance personnel. In general, they select, install, calibrate, repair and maintain aircraft avionics components and subsystems. They may also use computer-aided drafting and design (CADD) applications to assist engineers in designing modifications to avionics systems.

The vast majority of the work performed by avionics technologists deals with:

- maintenance of installed avionics on aircraft
- installation and testing of avionics equipment in aircraft
- maintenance and testing of avionics systems on the test bench.

Avionics technologists may be involved in:

- integrating avionics systems design into aircraft
- technical writing
- customer relations
- developing and producing electrical and electronic devices used in aviation
- assembling prototypes (models) of circuits, instruments and systems for testing
- fabricating basic sheet metal assemblies
- troubleshooting electrical, electromechanical and electronic instrumentation, circuits and sub-assemblies
- preparing and monitoring quality assurance plans and activities.

Avionics technologists may work as part of a team with engineers and technicians, or they may be solely responsible for a particular project, a laboratory or the maintenance of particular avionics systems.

Working Conditions

Avionics technologists work in laboratories and aircraft hangars, and in the close, cramped environment surrounding electronic instrumentation in an aircraft. They often work outside when there is no hangar to house the aircraft they are working on. They may work shifts or be required to lift items weighing up to 25 kilograms.

Avionics technologists working on international contracts may be away from home for a few days at a time or for year or more.

Personal Characteristics

Avionics technologists need the following characteristics:

- good oral and written communication skills to effectively convey scientific and technical information
- able to work alone or as members of a team
- willingness to keep up to date by taking additional training as required
- good mathematical abilities and the ability to visualize three-dimensional objects from two-dimensional drawings
- analytical ability, persistence and excellent troubleshooting skills
- good colour vision for distinguishing component parts

- manual and finger dexterity for handling tools and small parts.

They should enjoy working with tools and equipment at tasks that require precision, having clear rules and organized methods to guide their activities and analyzing data to solve problems.

Educational Requirements

In Alberta, the minimum education requirement for avionics technologists is a related **two year diploma** from an institute of technology. The following post-secondary institutions offer avionics programs:

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Avionics Engineering Technology diploma program. The entrance requirement is a high school diploma with English 30 or 33, Pure Math 30 (or equivalent) and one of Physics 30, Science 30 or Chemistry 30 (Physics 30 recommended).
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Avionics Technology diploma program. The entrance requirement is a high school diploma with English 33 and Applied Math 30 or equivalent (or successful completion of the Pre-Careers program at SAIT).

For information about other related programs of study, see the Aircraft Maintenance Engineer, Electronic Technician and Electronics Engineering Technologist occupational profiles.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

To find employment, graduates of avionics programs may be required to move to where the work is. Often, that is in sparsely populated northern communities.

Most avionics technologists are employed in general aviation and aerospace industries, and related industries such as accessory and equipment manufacturers. They are also employed by:

- air transportation firms
- federal government transportation departments
- the armed forces
- ground based communications and navigation organizations.

Most employers have company training programs to improve technologists' technical and supervisory skills. Additional training is also available from equipment and aircraft manufacturers. While most technologists are employed in their area of specialization, some advance to supervisory or management positions.

Avionics technologists are part of the larger National Occupational Classification 2244: Aircraft Instrument, Electrical and Avionics Mechanics, Technicians and Inspectors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Transportation and Warehousing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

About 950 Albertans are employed in the Aircraft Instrument, Electrical and Avionics Mechanics, Technicians and Inspectors occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since avionics technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for avionics technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Aircraft Instrument, Electrical and Avionics Mechanics, Technicians and Inspectors occupational group earned **up to $95,500 per year.** Those with three years of experience earned **$27,100 to $52,500 a year**. The average salary was **$42,800 per year**.

For more detailed information, see ASET's Annual Salary Surveys.

Baker

Produced FEBRUARY 2006

Bakers prepare and bake breads, cakes, cookies, pastries, pies and other baked goods.

NOC Number(s): 6252
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O d**

Duties

Duties vary from one position to another but, in general, bakers:

- weigh, measure and mix ingredients according to recipes or special customer instructions
- cut and form dough
- mix and deposit batters
- prepare fillings
- use ovens to bake products
- fry doughnuts
- decorate baked goods
- clean bowls and pans after use
- prepare production schedules to determine the variety and quantity of goods to be produced
- purchase, stock and rotate ingredients and supplies
- operate production machinery.

Working Conditions

Bakers work in clean, well-ventilated and well-lit environments. They generally work a 40-hour, five-day week that often include shift work. There is a slight risk of injury when operating hot ovens and production equipment.

Bakers routinely lift ingredient containers weighing up to 20 kilograms.

Personal Characteristics

Bakers need the following characteristics:

- good health and physical stamina
- manual dexterity
- a responsible attitude about ensuring that public health standards are met.

They should enjoy creating things with their hands.

Educational Requirements

To work in Alberta, bakers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,560 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Baker apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Northern Alberta Institute of Technology (NAIT) in Edmonton
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Baking certificate program. The entrance requirement is Grade 10 including English and math.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Baking and Pastry Arts diploma program. The entrance requirement is a Grade 10 math and English.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Bakers are employed in retail and wholesale bakeries, supermarkets, hospitals, institutions, hotels, catering companies, restaurants and camps.

Experienced bakers may advance to supervisory positions, start their own businesses or transfer their skills to related occupations such as cook (for more information, see the Cook occupational profile), pastry cook, cake decorator, baking instructor or supply-company salesperson. Alberta certified journeyman bakers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as bakers are employed in the following industries:

- **Retail Trade**
- **Accommodation and Food Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,750 Albertans are employed in the Bakers occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice bakers earn at least 65 per cent of the journeyman rate in their place of employment in the first year, 75 per cent in the second year and 85 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$10 to $16.50 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Bakers occupational group working part-time or full-time earned from **$12,100 to $44,600 a year.** The average salary was **$21,500 a year.**

Banking/Investment Manager

Produced DECEMBER 2005

Banking and investment managers plan and direct the activities of departments or branches in financial establishments such as banks, credit unions, trust companies, mortgage firms and mutual fund investment companies.

NOC Number(s): 0122.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M s**

Duties

Banking and investment managers are responsible for the success of their departments or branches. Duties and responsibilities vary from one department and institution to another but, in general, banking and investment managers:

- sell banking and investment products and services
- identify customer needs and preferences by responding to questions and initiating customer interactions
- help customers clarify their long term financial goals, provide information and present customized plans to achieve goals
- ensure that deposit, investment and loan sales and services meet regulatory and company policy requirements
- follow security procedures and report any unusual or fraudulent activity
- plan and budget for the operation of their establishments
- direct procedures such as accepting loan applications and approving credit
- develop customer service procedures
- deal with customer complaints
- manage staff and facilitate employee development.

Bank managers in small branches may supervise banking procedures directly and process loan applications. In larger branches, managers supervise the work of account managers and other banking representatives.

Banking and investment managers in all circumstances must keep up to date with changes (for example, new legislation) that affect their industry and work in close co-operation with advertising and sales departments. They are sometimes required to represent their organizations in the community and are often involved in service clubs and volunteer work.

Working Conditions

Banking and investment managers often work extended hours. Some travel may be required to visit customers. Particularly at the beginning of their careers, they may be required to move fairly frequently.

Personal Characteristics

Banking and investment managers need the following characteristics:

- a high degree of personal integrity
- good communication skills
- strong interpersonal skills
- good judgment and problem-solving skills
- sales ability (persistence and persuasion)
- strong leadership skills
- the ability to work in a hectic environment and multi-task.

They should enjoy supervising and co-ordinating the work of others, having clear rules and methods to guide their activities, and working with people.

Educational Requirements

Many bank managers have worked their way up by gaining experience in management trainee and junior management positions. However, employers generally prefer to hire applicants who have **a related university degree or post-secondary diploma**. Managers who specialize in areas such as credit management, selling investments or financial planning must have appropriate training (for more information, see the Credit/Loans Manager, Financial Planner and Investment Advisor occupational profiles).

Most organizations have extensive training programs that allow trainees to work their way up through the ranks. Post-secondary graduates can complete this training period in less time.

Commerce, business administration and related degree and diploma programs are offered by many post-secondary institutions. The following institutions offer degree programs with specializations in finance or financial services:

- **Lakeland College** in Vermilion offers a Bachelor of Applied Financial Services degree program. The entrance requirement is a recognized two year Business Administration diploma.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a Bachelor of Applied Business-Finance degree program. The entrance requirement is a grade point average (GPA) of 65 per cent, 2.3/4 or C+ in a recognized two year business diploma program that includes course work in the following areas: Basic Accounting, Business Math, Micro and Macro Economics, Statistics, Business Communications and an Introductory Computer Course. An Introductory Investment course is recommended.
- The **University of Alberta** in Edmonton offers four year and five year (co-op) Bachelor of Commerce degree programs and Master of Business Administration (MBA) programs with a specialization in finance. The entrance requirement for the bachelor's degree program is a competitive average in a pre-professional year that includes specified courses in English, economics, math and statistics.
- The **University of Calgary** Haskayne School of Business offers four year and five year Bachelor of Commerce degree programs and a MBA program with a specialization in finance. The entrance requirement for the bachelor's degree program is a competitive average in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30, and three of the following: Math 31, Social Studies 30, Biology 30, Chemistry 30, Physics 30, Science 30, a 30 level language other than English, one five credit Grade 12 subject.
- The **University of Lethbridge** offers a four year Bachelor of Management degree program and post-diploma programs with a specialization in finance. The entrance requirement for the bachelor's degree program is an average of at least 65 per cent in English Language Arts 30-1 or English 30, Pure Math 30 or Math 30 (or equivalent), two other approved 30-level subjects and one other approved Grade 12 subject. The entrance requirement for the post-diploma program is a recognized two year Business Administration/Management diploma.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the insitution to which they wish to transfer.

Two year financial planning or services diploma programs are offered by the following Alberta post-secondary institutions:

- **Lakeland College** in Vermilion
- **Medicine Hat College**
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Red Deer College**.

Business administration and management programs are offered by:

- **Alliance University College** in Calgary
- **Athabasca University**
- **Canadian University College** in College Heights
- **Grande Prairie Regional College**
- **Keyano College** in Fort McMurray
- **The King's University College** in Edmonton
- **Lakeland College** in Vermilion and Lloydminster
- **Lethbridge Community College**
- **Medicine Hat College** in Medicine Hat and Brooks
- **Mount Royal College** in Calgary
- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton and at various locations
- **Northern Lakes College** in Grouard and other locations

- **Portage College** in Lac La Biche
- **Red Deer College**
- the **Southern Alberta Institute of Technology (SAIT)** in Calgary.

Minimum admission requirements for two year financial planning and business administration programs vary but generally include a high school diploma with a specified minimum average or minimum marks in particular courses (e.g. Grade 12 English).

For current information about specific programs and their admission requirements, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Banking and investment managers are employed by:

- banks
- credit unions
- trust companies
- mortgage investment companies
- securities firms.

Advancement opportunities vary depending on the size and type of company. Some employers prefer to train their own personnel and promote from within.

Banking/investment managers are part of the larger National Occupational Classification 0122: Banking, Credit and Other Investment Managers. In Alberta, over 75 per cent of people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Employment growth is best for investment managers.

Over 4,100 Albertans are employed in the Banking, Credit and Other Investment Managers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since banking/investment managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for banking/investment managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, part-time and full-time **starting** salaries for Albertans working in the Banking, Credit and Other Investment Managers occupational group ranged from **$23,500 to $109,500 a year.** The average salary for people in this occupational group was **$68,200 a year.**

Banquet Manager

Produced FEBRUARY 2004

Banquet managers plan, organize and direct the service of food and beverages for banquets and other social functions.

NOC Number(s): 0631
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M S**

Duties

Duties and responsibilities vary from one position to another but, in general, banquet managers:

- discuss requirements with customers and take detailed notes about banquet requirements
- develop banquet menus in consultation with caterers, chefs or cooks
- prepare budgets
- determine requirements for serving staff and supplies
- supervise everything from the set up prior to the function to the clean up afterward
- develop work schedules and supervise food services during the function
- maintain proper liquor controls and monitor alcohol service
- ensure that equipment is properly cleaned and maintained
- follow up with clients after functions and deal with customer complaints
- hire, train and supervise staff to ensure that service standards are met.

In smaller organizations, banquet managers may assist staff with functions such as setting up the room.

In larger organizations, the duties listed above may be divided among several managers and supervisors. For example, where banquet managers and catering managers have separate roles, catering managers discuss banquet requirements with customers and work with chefs and food and beverage managers to develop menus.

Working Conditions

Banquet managers often work long hours that include evenings, weekends and holidays. Assisting staff may sometimes involve heavy lifting.

Personal Characteristics

Banquet managers need the following characteristics:

- good communication, supervisory and problem-solving skills
- excellent organizational skills
- the ability to pay close attention to details
- the ability to work alone or as part of a team
- the ability to remain calm while working in close quarters with others during busy periods
- flexibility and creativity.

They should enjoy:

- co-ordinating information and the activities of others
- setting work schedules, monitoring staff and controlling inventory
- negotiating arrangements with suppliers and clients.

Educational Requirements

(section revised JULY 2005)

There are no standard minimum education requirements for banquet managers but related education is becoming increasingly important. Most employers require banquet managers to have food and beverage service training, food safety training and experience in dining room management. Food allergy training is an asset.

In Alberta, the following institutions offer post-secondary programs related to food service management.

- The **Northern Alberta Institute of Technology** in Edmonton offers a:
  - one year certificate and a two year Hospitality Management diploma program. The minimum education requirement for both programs is Grade 11 including English and math.
  - two year Food and Nutrition Management diploma program. The entrance requirement for this program is a high school diploma with English 30 or 33, Math 20 or 23, Biology 20 or 30 and any other 30 level science.
- **Red Deer College** offers one year certificate and two year diploma programs in Hospitality and Tourism with a specialization in food and beverage management. The entrance requirement is a high school diploma or equivalent.
- **Robertson College** offers a 40-week International Hospitality and Hotel Management program. The entrance requirement is a high school diploma with a Grade 12 English.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Hotel and Restaurant Management diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33 and Pure or Applied Math 30 or Math 33.
- **Trend College**, a private vocational school in Edmonton, offers a 34 week Hotel and Tourism Management program and a 50 week International Hotel and Tourism Management Studies program. Applicants must be at least 19 years of age, have the approval of the Program Coordinator after undergoing a personal interview and have a high school diploma or equivalent.
- The **University of Calgary** offers a four year Bachelor of Hotel and Resort Management degree program that also may be taken as a co-op program. The entrance requirement is a high school diploma with an average of at least 70 per cent in English 30, Pure Math 30 and three other appropriate subjects plus a SAIT diploma in Hotel and REstaurant Management (or equivalent) with a grade point average of 3.0/4 or above. The University of Calgary also offers four year and five year co-op Bachelor of Commerce degree programs in Tourism and Hospitality Management. The entrance requirement for the B.Comm. program is a high school diploma with an average of at least 70 per cent in English 30, Pure Math 30 and three other appropriate subjects.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Employment and Advancement

(section revised JANUARY 2006)

Banquet managers are employed by hotels and hospitality centres such as convention centres. Advancement opportunities vary depending on the banquet manager's qualifications and the size and nature of the employing organization.

Banquet managers are part of the larger National Occupational Classification 0631: Restaurant and Food Service Managers. In Alberta, most people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 13,800 Albertans are employed in the Restaurant and Food Service Managers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 200 to 350 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since banquet managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for banquet managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Banquet managers may receive gratuities in addition to a base salary.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Restaurant and Food Service Managers occupational group working part-time or full-time earned from **$13,000 to $179,900 a year.** The average salary was **$30,900 a year.**

© Government of Alberta, Human Resources and Employment

Bartender

Produced MARCH 2003

Bartenders mix and serve drinks and control the beverages leaving the bar in cocktail lounges, restaurants and other establishments where liquor is served.

NOC Number(s): 6452
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

Bartenders may serve customers directly at the bar or prepare drinks to be served by other staff members. In addition to serving beer and wine, they mix ingredients such as liquor, fruit juices, cream, coffee, soft drinks, water, sugar and bitters in the right proportions to prepare cocktails and other drinks. They may also make cappuccino, espresso and other special coffees.

In general, bartenders have the following duties and responsibilities:

- mix and invent drinks
- serve alcohol responsibily (including refusing further service when appropriate)
- promote their establishments
- wash glassware and keep the bar area clean and orderly
- arrange displays of bar stock and glassware
- prepare garnishes
- serve snacks or food items to people seated at the bar
- keep an inventory of liquors, wines, beers, soft drinks, cream, fruits and fruit juices
- order supplies
- operate computerized point of sales systems
- collect payments for drinks and balance cash receipts
- monitor video lottery terminals.

In larger operations, bartenders may use machines that automatically mix and dispense drinks. However, they still need to know how to fill unusual orders and how to do the work manually if equipment is not functioning properly.

Bartenders may also have supervisory responsibilities such as:

- planning, organizing and controlling the operations of a cocktail lounge or bar
- co-ordinating beverage requirements with other supervisory staff
- planning bar menus
- assisting with advertising and promotions.

Working Conditions

Bartenders often work nights, weekends, holidays and/or split shifts. They may be required to lift heavy items such as kegs of beer.

Personal Characteristics

Bartenders need the following characteristics:

- the strength and stamina required to stand for long periods of time and lift kegs and cases of beverages
- good motor co-ordination
- good judgment and a responsible attitude when serving alcohol, combined with the ability to maintain customer satisfaction
- honesty

- patience
- the math skills required to handle money accurately
- a good memory for details
- the ability to get along well with others.

They should enjoy having clear rules and organized methods, serving people and taking responsibility for bar operations.

Bartenders must be able to perform their duties cheerfully, courteously and efficiently. They are expected to listen to customers sympathetically, without getting personally involved. They also must co-operate with other food and beverage service workers to maintain high standards of customer service.

Educational Requirements

(section revised NOVEMBER 2005)

Bartenders must be at least 18 years of age. They must be able to measure accurately to prepare drinks quickly and without waste, especially during busy periods, and need a working knowledge of:

- cocktail recipes
- the characteristics of wine, beer and spirits
- liquor laws
- Alberta Gaming and Liquor Commission policies and regulations.

Server intervention training such as the "It's Good Business" course offered by the Alberta Hotel and Lodging Association (see below), food safety training and food allergy training are definite assets when looking for employment.

Bartenders may train on the job under the direction of an experienced bartender or take related training programs. In Alberta, the following private vocational schools offer training programs:

- the **Fine Art Bartending School** in Edmonton offers a 50 hour (day or evening) Bartending program. Applicants must be at least 18 years of age, have at least Grade 7 or equivalent education, be able to read and write in English, and be in good health.
- the **Executive School of Bartending** in Calgary offers a 60 hour Bar Mixology program. Applicants must have a high school diploma with English 30 or 33 or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The **Alberta Hotel and Lodging Association** offers a half-day "It's Good Business" course for people who are responsible for serving alcohol. Courses are delivered as needed at businesses throughout the province.

The **Alberta Tourism Education Council (ATEC)** has developed a process for Bartender Certification that is recognized in the tourism and hospitality industry across Canada.

Anyone interested in becoming a bartender is advised to contact practicing bartenders or their employers to enquire about recommended training options.

Employment and Advancement

(section revised JANUARY 2006)

Bartenders are employed by:

- hotels
- restaurants
- cocktail lounges
- convention facilities
- other businesses that serve alcoholic beverages.

Some bartenders in large establishments become head bartenders, wine stewards, restaurant managers or food and beverage managers. ATEC certification is an asset when applying for advancement.

Some hotels offer training programs designed to prepare employees for positions such as food and beverage controller, or assistant food and beverage manager.

In Alberta, over 75 per cent of people employed as bartenders are employed in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,250 Albertans are employed in the Bartenders occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 90 **new** positions will be created each year **in addition** to job openings created by employment turnover. There is a fairly high employment turnover rate in this occupation because many bartenders travel and work abroad or move into other occupations.

Salary

(section revised OCTOBER 2005)

Hourly wages for bartenders vary greatly depending on the type of establishment. Tips are earned by providing quality service. In bars where servers deliver drinks to customers, bartenders often receive a portion of servers' tips.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Bartenders occupational group working part-time or full-time earned from **$9,200 to $31,000 a year.** The average salary was **$11,900 a year.**

Tips may add considerably to bartenders' incomes.

Beekeeper

Produced MARCH 2005

Beekeepers manage and keep colonies of honey bees in apiaries (bee-yards) to produce honey and hive by-products (e.g. pollen, bees wax), pollinate crops, or produce queens and bees.

NOC Number(s): 8251
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M O**

Duties

Beekeeping duties vary with the seasons. The busiest time is spring, summer and fall when beekeepers:

- prepare colonies for production and wintering
- inspect colonies for vitality, queen performance, level of food reserves and the presence of parasites or disease
- maintain healthy colonies by feeding bees, replacing queen bees, dividing colonies, and controling diseases, parasites and predators
- follow food safety and traceability guidelines and regulations when harvesting and processing honey and other hive products
- market products to consumers or packers
- maintain beekeeping equipment and the honey house
- keep records of production and colony conditions.

In winter, beekeepers regularly check colonies in wintering facilities, and repair and maintain hive boxes and equipment in preparation for spring.

Beekeepers use equipment such as special protective clothing, bee smokers, hive tools and carpentry tools. Commercial beekeepers also drive trucks and fork-lifts, and operate and maintain machines ranging from extractors and honey processing equipment to grass mowers and chemical sprayers (for controlling grass around hives). Beekeepers also use pesticides and antibiotics in their bee colonies.

Working Conditions

Beekeeping requires lifting items weighing up to 25 kilograms or more, and working long hours in summer.

Personal Characteristics

Beekeepers need the following characteristics:

- self-motivated
- good organizational skills
- good physical health, the ability to withstand bee stings and no allergies to honey bee stings
- able to integrate new ideas and methods in their operations
- problem solving skills
- good numerical skills
- mechanical aptitude
- good interpersonal and time management skills.

They should enjoy taking a methodical approach to their work.

Educational Requirements

Beekeepers must be knowledgeable about:

- bee biology and behavior
- nectar sources and honey quality
- the identification and control of diseases, parasites and predators that affect bees
- the proper use of pesticides, antibiotics and chemicals
- seasonal and industry trends
- marketing methods
- provincial legislation (Bee Act and Bee Regulation)
- food safety and employment regulations
- financial and production record keeping.

Inexperienced beekeepers are advised to obtain related experience by working with established beekeepers.

Short courses are offered periodically by Alberta Agriculture, Food and Rural Development and local beekeeper associations.

Other Requirements

Anyone who has bees or beekeeping equipment is required to register annually with Alberta Agriculture, Food and Rural Development.

Employment and Advancement

(section revised JANUARY 2006)

Large beekeeping operations often employ beekeeping assistants over the summer months. Some employ assistants year-round.

Beekeepers may start their own businesses or buy an established apiary. Setting up a commercial beekeeping business requires considerable capital investment in addition to the cost of land.

Beekeepers are part of the much larger National Occupational Classification 8251: Farmers and Farm Managers. In Alberta, most people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 35,950 Albertans are employed in the Farmers and Farm Managers occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since beekeepers form less than two per cent of the larger occupational group on which this forecast is based, only a portion of the new positions will be beekeepers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Beekeepers' incomes depend on weather conditions, production costs, the current market value of honey, the amount of honey or pollen produced per hive and monies received for pollination services or the sale of queens and honey bees.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Farmers and Farm Managers occupational group working part-time or full-time earned from **$16,200 to $83,200 a year.** The average salary was **$39,000 a year.**

Binding and Finishing Machine Operators

Produced DECEMBER 2005

Binding and finishing machine operators set up and operate machines and equipment that turn large sheets of paper from the printing press into finished print materials such as books, brochures and presentation folders.

NOC Number(s): 9473.1, 9473.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M i; O M i**

Duties

Binding and finishing machine operators run specialized equipment and machines that collate, cut, fold, gather, glue, stitch and drill printed material. Their duties vary depending on the machine but, in general, binding and finishing machine operators:

- review work orders
- set up, adjust and operate machines and equipment
- input instructions and monitor the operation of computerized machines and equipment
- trouble-shoot problems and make adjustments as required
- perform routine maintenance.

Binding and finishing machine operators may operate a wide variety of machines including ones that:

- fold, cut or collate pages
- drill holes in pages
- die cut pages
- insert materials into cerlox, wire or adhesive bindings
- apply glue on the ends of note pads
- emboss, imprint or metal foil materials
- wire stitch collated materials
- laminate materials
- package printed materials.

Working Conditions

Binding and finishing machine operators work in large industrial plants or, in smaller companies, in industrial bays. Shift work may be required and working overtime to meet print deadlines is common.

Binding and finishing machine operators often stand for long periods and do a considerable amount of bending and reaching. They may be required to lift heavy packages of paper.

Personal Characteristics

Binding and finishing machine operators need the following characteristics:

- good hand/eye co-ordination and full body mobility
- normal hearing and vision
- the ability to measure and calculate measurements accurately
- ability to pay attention while performing repetitive tasks
- mechanical ability
- the ability to work safely and efficiently under the pressure of deadlines.

They should enjoy working with computerized and mechanical equipment, following routines, and performing set tasks.

Educational Requirements

Binding and finishing machine operators generally acquire their skills by learning on the job. Printing and publishing is an evolving industry and machine operators must be prepared to keep learning new skills.

There are no standard education requirements for binding and finishing machine operators. Employers may prefer to hire high school graduates who have experience operating machines or equipment, or graduates of related post-secondary programs. A security clearance may be required if the operator will be working with sensitive materials.

In Alberta, the following institutions offer related post-secondary programs.

- **NorQuest College** in Edmonton offers a 20 week Press and Bindery Operator program. The entrance requirement is Grade 10 English and math. Graduates of this program may transfer credit toward the SAIT diploma program.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Digital Graphics Communications diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 (or English 30 or 33).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Binding and finishing machine operators are employed by:

- trade binderies
- commercial printing companies
- large organizations that have in-house printing, binding and finishing departments
- newspapers
- magazines
- publishing companies.

Many binderies have a small core staff and hire extra staff on a temporary basis when needed to meet contract deadlines.

Newly hired machine operators are usually trained on simpler or lighter equipment. As they gain experience, they are trained on more complex equipment. Machine operators who have experience running a variety of machines may become supervisors.

In Alberta, most people employed as binding and finishing machine operators work in the **Other Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment in the Other Manufacturing industry (for example, the growth of electronic information distribution is expected to have a negative effect on binderies)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 400 Albertans are employed in the Binding and Finishing Machine Operators occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Binding and Finishing Machine Operators occupational group working part-time or full-time earned from **$14,500 to $52,300 a year.** The average salary was **$31,400 a year.**

Biochemist

Produced SEPTEMBER 2005

Biochemists study the chemical make-up of living matter and the molecular basis for processes that occur in cells. They develop medical, agricultural, food science, pharmacological, industrial, environmental and other practical applications.

NOC Number(s): 2112
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Biochemistry combines the fields of biology and chemistry. In general terms, biochemists study the chemistry of biological molecules to better understand events and processes such as how:

- living cells reproduce, acquire energy, grow and develop
- enzymes function (metabolism)
- gene regulation is controlled
- organisms adapt to stresses.

Biochemists may specialize in a variety of areas:

- the chemistry of cellular processes such as metabolism, growth and aging
- the neurochemistry of the brain
- vitamins, DNA, hormones, enzymes and other proteins
- the three-dimensional structure of biological macromolecules
- the molecular basis of how the immune system functions
- mutations in organisms that lead to cancer and other diseases
- the way cells store and express genetic information
- genetic engineering
- biochemical diagnostic tests
- recombinant DNA technology for the production of pharmaceutically and industrially useful proteins
- environmental analysis of air and water quality, and the interdisciplinary study of human impacts on the environment.

Biochemists in forensic science may specialize in the use of DNA fingerprinting techniques for identification purposes, or in the analysis of small molecular weight compounds such as alcohol and drugs. They may be called upon to give evidence in courts of law.

Biochemists often work in interdisciplinary teams with physiologists, pharmacologists, plant biologists, microbiologists, chemists, agronomists and other professionals. During laboratory research, they often supervise the work of technicians and technologists.

Working Conditions

Biochemists work in offices and laboratories. When experiments do not fit into a normal eight hour workday, they may be required to work evenings and weekends. They must observe safety precautions when working with contaminants such as viruses or other biohazards.

Personal Characteristics

Biochemists need the following characteristics:

- curiosity and imagination
- persistence and a willingness to work long hours

- problem solving skills
- good oral and written communication skills
- willingness to do the reading required to keep up with new developments and discoveries.

They should enjoy synthesizing information, finding innovative approaches, using equipment and instruments to perform tasks requiring precision, and co-ordinating and supervising the work of others.

Educational Requirements

Most biochemists begin their post-secondary education by completing a Bachelor of Science (B.Sc.) degree in biochemistry or a related science such as chemistry, biology, physics, microbiology, physiology, pharmacology or genetics. Economics and management courses are a definite asset for biochemists who wish to eventually move into management positions.

Independent investigators who determine and define research programs must have a master's or doctoral (PhD) degree in biochemistry. To work in a hospital or private health care laboratory, or in some specialized health care industries, PhD biochemists should take an additional two to three year post-doctoral course to become certified clinical chemists.

In Alberta, the following institutions offer degree programs in biochemistry:

- The **University of Alberta** in Edmonton offers four year B.Sc. honours and specialization degrees. The entrance requirement is an average of 65 to 80 per cent in English Language Arts 30-1 (or English 30), Math 30 or Pure Math 30, Biology 30, Chemistry 30 and Physics 30. The university also offers master's and doctoral degree programs in biochemistry.
- The **University of Calgary** offers a four year B.Sc. program in biochemistry. The entrance requirement is an average of at least 70 per cent in English 30, Math 30 or Pure Math 30, Chemistry 30, Biology 30 and one other appropriate Grade 12 subject. Math 31 and Physics 30 are recommended. The university also offers master's and doctoral degree programs in biochemistry.
- The **University of Lethbridge** offers a four year B.Sc. program in biochemistry with a co-operative education option. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), Math 30 or Pure Math 30 (or Applied Math 30 or at least 75 per cent in the University of Athabasca's Math 101), Biology 30, Chemistry 30 and one other 30-level subject. Math 31 and Physics 30 are recommended. The university also offers master's and doctoral degree programs in biochemistry.

For information about other related programs of study, see the appropriate occupational profiles (e.g. Biotechnologist, Chemist, Geneticist, Microbiologist, Pharmacologist, Physiologist, Physicist).

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Biochemists are employed by the following types of employers:

- provincial and federal governments
- universities and medical schools
- biotechnology companies
- pharmaceutical companies
- other companies in the oil, cosmetics, food and beverage, and environmental industries.

Biochemists who have Ph.D.s usually undergo at least two years of post-doctoral training before they are considered eligible for positions in academic institutions, industrial research laboratories or governmental agencies. Those who have B.Sc. or master's degrees usually work as technicians or laboratory assistants under the supervision of more experienced biochemists. Some biochemistry graduates work in sales for biotechnology and pharmaceutical firms.

Biochemists are part of the larger National Occupational Classification 2112: Chemists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Health Care and Social Assistance**
- **Professional and Technical Services**

- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including the following:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 1,050 Albertans are employed in the Chemists occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since biochemists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for biochemists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Biochemists' salaries vary considerably depending on whether they have a B.Sc. degree and are working as technicians or have a Ph.D. degree and are conducting research.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Chemists occupational group earned **up to $104,400 a year**. Those with three years of experience earned from **$61,400 to $95,000 a year.** The average salary was **$83,900 a year**.

Biological Technician

Produced SEPTEMBER 2005

Biological technicians perform routine analysis and technical duties in the field, in the laboratory or both. They provide technical support and services for scientists and engineers working in fields such as agriculture, environmental science, resource management, plant and animal biology, microbiology, cell and molecular biology and health sciences.

NOC Number(s): 2221.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M o i**

Duties

Biological technicians' duties and responsibilities vary greatly depending on their training and experience and where they are employed. They may:

- conduct field and laboratory tests
- operate and maintain equipment for field tests and surveys
- isolate, identify and prepare specimens for study
- grow cultures under controlled conditions
- collect field data
- maintain quality control/assurance
- analyze data and report results.

Depending on the type of technical work, biological technicians also may:

- conduct or supervise operational programs such as fish hatcheries or greenhouse and livestock production programs
- conduct biological, microbiological, chemical and biochemical tests
- conduct plant and animal inventory surveys to gather information on plant and animal distribution and abundance
- prepare progress reports on surveys for research biologists
- set up and maintain specific or general laboratory areas
- prepare reagents, perform analyses and maintain equipment in laboratories
- collect information for industry (for example, regarding land use or reclamation)
- supervise junior staff.

The degree of responsibility biological technicians have in determining and defining laboratory programs and field work is directly related to their education and experience.

Working Conditions

Working environments vary considerably in this occupation. Biological technicians may work primarily indoors in laboratories and offices or outdoors in all weather conditions. Some work in both indoor and outdoor environments. Those who work outdoors may be required to travel to remote locations or operate transport equipment such as boats, quads or four wheel trucks with standard transmissions. Lifting requirements generally range up to 10 kilograms but some types of work are more physically demanding. Biological technicians who conduct microbial tests and laboratory analyses must take safety precautions to avoid exposure to infectious bacteria and viruses. Those who work in the field may be exposed to fungi, viruses or other biological agents

Hours of work also vary. Long hours may be required including evening or weekend work. Some jobs are seasonal.

Personal Characteristics

Biological technicians need the following characteristics:

- good communication skills
- good health and physical stamina
- the ability to keep detailed, accurate records
- the finger dexterity required to adjust microscopes and other fine instruments
- the ability to work independently and in a team environment.

They should enjoy having clear guidelines and organized methods for their work, working with laboratory apparatus at tasks requiring precision, and gathering data in the field.

Educational Requirements

Most employers require biological technicians to have **related post-secondary education:** a two year diploma related to biological sciences or an equivalent number of university courses. Employers also may require applicants to have:

- first aid training
- WHMIS (Workplace Hazards and Materials Information System) training
- TDG (Transportation of Dangerous Goods) training
- a valid driver's license (preferably with no demerits)
- no criminal record record.

Colleges and technical institutes throughout Alberta offer two year diploma programs in biological/environmental sciences/technology. Entrance requirements vary from one program to another but generally include a high school diploma or equivalent (or mature student status) with an average of at least 60 per cent in English Language Arts 30-1 or English 30, Biology 20 or 30, Chemistry 20 or 30 and a Grade 11 or 12 math course.

Universities and university colleges offer degree programs in biology and related sciences. Entrance requirements vary but generally include a high school diploma with an average of at least 65 per cent (up to 80 per cent for admission to some programs) in English Language Arts 30-1 or English 30, Math 30 or Pure Math 30, Biology 30, Chemistry 30 and one other appropriate Grade 12 subject (Physics 30 is required for admission to some programs). Athabasca University offers distance education programs and has an open admissions policy.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary. The Alberta Society of Engineering Technologists (ASET) offers certification for graduates of recognized education programs who have two years of successful experience in industry.

Employment and Advancement

(section revised JANUARY 2006)

Biological technicians may be employed by:

- food processing and manufacturing companies
- pharmaceutical companies
- oil and chemical companies
- agricultural firms
- research and development facilities
- biological and environmental consulting firms
- federal and provincial government departments dealing with parks, fish and wildlife, agriculture and public lands
- forensic laboratories.

Competition for positions is keen. Many new entrants into this occupation work in seasonal or part-time jobs before they obtain permanent positions.

Advancement opportunities for biological technicians are limited. Master's and doctoral degrees are required for most research and management positions.

Biological technicians are part of the larger National Occupational Classification 2221: Biological Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 950 Albertans are employed in the Biological Technologists and Technicians occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for biological technicians vary greatly depending on their education and experience, and where they work.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biological Technologists and Technicians occupational group working part-time or full-time earned from **$19,200 to $83,000 a year.** The average salary was **$43,200 a year.**

© Government of Alberta, Human Resources and Employment

Biologist

Produced JANUARY 2005

Biologists conduct research to learn more about living organisms and ecosystems, manage natural resources, and develop new practices and products in such diverse fields as environmental conservation, forensics and pest control.

NOC Number(s): 2121.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Some biologists work primarily in the field, organizing and participating in field inventories or surveys, documenting species for various types of studies and collecting specimens for museums, environmental impact assessments, reclamation or other purposes. Other biologists conduct laboratory research. However, in general, biologists:

- inventory organisms (e.g. plants, animals or communities)
- organize and implement field studies to analyze and monitor such things as population dynamics, genetics or habitat
- take samples and conduct tests in laboratories
- analyze and interpret data, and write scientific papers
- use statistics and mathematical models for applications such as estimating the number and kinds of organisms in a specific place
- assess harvest rates and sustainable yield for harvested fish and wildlife species
- consult with stakeholders and the public at large to explore resource management options
- make recommendations regarding the sustainable development of resources
- recommend operating conditions for industrial activities to negate or minimize environmental damage
- provide information and make presentations to schools, clubs and interest groups
- supervise the work of biological technicians and other staff.

Biologists may have a wide variety of job titles depending on their area of specialization. For example, aquatic biologists may be called fisheries biologists, invertebrate biologists, limnologists or marine biologists depending on the types of organisms (e.g. fish, plankton) and habitats (ocean or freshwater environments) they study.

There are many specializations in each of the following broad areas of study.

Botanists study plants and plant systems (e.g. plant growth, development, function, distribution, origin) and related environmental issues (e.g. conservation, re-vegetation, weed control). For example, they may be involved in:

- the study of plant species and the design of reserves and recovery plans for threatened species
- plant identification and inventory
- the development of biological control strategies to combat pest insects and weeds
- the reclamation of old mining land to stabilize the surface and facilitate the recovery of natural vegetation
- the study of the effects of pollutants discharged into the air by factories or vehicles on natural vegetation
- the study of how habitats change after a disturbance such as a fire (ecological succession)
- the study of plant specimens in greenhouses and laboratories
- evolutionary or taxonomic studies
- the study of prehistoric plant fossils.

Fisheries biologists study freshwater fish and their habitats. For example, they may:

- study the relationship between water quality and the health of a fishery
- identify fish, aquatic plants and insects (fish food)
- develop and evaluate fish management programs
- manage fish hatcheries.

Marine biologists study bacteria, plankton, plants and animals that live in oceans and seas and on their shorelines. For example, they may:

- study and develop models to predict the behaviour, distribution, evolution or relationships of organisms that live in marine environments (e.g. cod stocks)
- study the effects of light, temperature, physiology and nutrients on the growth of plants and animals in the sea
- study the effects of pollution on plant and animal life in oceans (water chemistry)
- develop new food sources and other useful products from the sea.

Wildlife biologists study wildlife (birds, reptiles, mammals, amphibians), wildlife habitat and environmental interactions (e.g. the effects of fire), and apply their knowledge to the management of wildlife resources and natural habitats.

For information about other areas of study, see the Ecologist, Entomologist, Food Scientist, Geneticist, Microbiologist, Pharmacologist and Toxicologist occupational profiles.

Working Conditions

Biologists' working environments range from offices and laboratories to research ships and remote, rugged terrain. Some work primarily outdoors collecting and identifying specimens, taking samples, and surveying and documenting populations. Others work primarily indoors in offices, classrooms and laboratories.

Depending on their specialty, biologists may be away from home for weeks at a time, working outdoors in all kinds of weather conditions, or they may spend considerable amounts of time working with computers in offices or equipment in laboratories.

Physical requirements also vary considerably in this occupation. Office and laboratory work may require no significant lifting but field work can be extremely demanding (for example, lifting a 50 kg net on a rolling ship).

Personal Characteristics

Biologists need the following characteristics:

- initiative and an open-minded approach to interpreting data
- an interest in nature and an appreciation for all forms of life
- an interest in mathematics and statistics
- good observation skills
- the stamina and endurance required for field work
- problem solving skills, especially in remote field situations
- good oral and written communication skills
- the ability to work well independently and in a team environment.

They should enjoy:

- synthesizing information and finding innovative solutions to problems
- working with equipment and instruments at tasks that require precision
- co-ordinating and supervising the work of others
- working with other scientists.

Educational Requirements

A four year Bachelor of Science degree in a biological or environmental science is the minimum requirement for entry to this field. A Master of Science degree is generally required for work as a field biologist, administrator, environmental consultant, professional biologist in industry or advisor with an international assistance agency. A doctoral (PhD) degree and experience as a post-doctoral fellow are required to work as a researcher or university professor.

In Alberta, the **University of Alberta** in Edmonton, the **University of Calgary** and the **University of Lethbridge** offer master's and doctoral programs in biological sciences. Admission to a master's degree program requires a specified grade point average in the last two years of a four year bachelor's degree program, or equivalent.

The following post-secondary institutions offer four year bachelor's degree programs in biological and environmental sciences:

- **Canadian University College** in Lacombe
- **Concordia University College of Alberta** in Edmonton
- **The King's University College** in Edmonton
- **University of Alberta** in Edmonton and Camrose

- **University of Calgary**
- **University of Lethbridge**.

Entrance requirements for bachelor's degree programs vary but generally include a high school diploma with an average of at least 60 per cent (70 per cent or higher for some programs) in English 30, Pure Math 30 or equivalent, Biology 30, Chemistry 30 and one other approved 30-level subject (preferably Math 31 or Physics 30).

Students interested in a particular specialty are advised to consult a faculty advisor before selecting undergraduate courses.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised JULY 2005)

Professional Biologist is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Professional Biologist, you must be a registered member of the Alberta Society of Professional Biologists (ASPB). You do **not** have to be registered with ASPB if you do not call yourself a Professional Biologist.

Employment and Advancement

(section revised JANUARY 2006)

Biologists are employed by:

- chemical companies
- environmental and engineering consulting companies
- health and educational institutions
- federal, provincial and local government departments and agencies
- pharmaceutical and biotechnical companies
- resource (e.g. coal, oil and gas) and utility industries.

Competition for positions is often keen. Related summer, part-time or volunteer work experience is a valuable asset when seeking permanent employment. A master's or doctoral degree is required for research and academic positions.

In Alberta, over 75 per cent of Biologists and Related Scientists work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists occupational group working part-time or full-time earned from **$29,400 to $103,200 a year.** The average salary was **$64,800 a year.**

© Government of Alberta, Human Resources and Employment

Biomedical Engineering Technologist

Produced JUNE 2004

Biomedical engineering technologists maintain and repair the biomedical equipment that physicians, nurses and other medical personnel use to monitor, diagnose and treat medical conditions.

NOC Number(s): 2241.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M**

Duties

Biomedical engineering technologists inspect, maintain, repair and sometimes install a wide variety of biomedical equipment such as:

- heart-lung machines
- kidney dialysis machines
- physiological monitors
- laboratory equipment
- venitlators
- sterilizers
- defibrillators
- infusion devices
- patient-care monitors
- physiotherapy equipment
- diagnostic imaging equipment
- laser equipment
- laparoscopic equipment
- infant incubators
- anesthesia apparatus.

This equipment must be routinely checked and maintained to ensure the safety of patients and staff. Routine maintenance also helps to identify potential problems and save costly repairs and downtime.

When a device appears to be broken, biomedical engineering technologists first determine if the fault is a simple problem or caused by user error. For more serious and time-consuming repairs, they may take the device out of service for extensive trouble-shooting. This may involve:

- dismantling the device
- repairing or replacing components or circuit boards
- calibrating the device
- advising hospital staff and management that aging equipment needs to be replaced.

Biomedical engineering technologists may also provide advice regarding the specifications and evaluation of proposed new equipment and facility design.

When new equipment arrives or existing equipment is upgraded, biomedical engineering technologists may:

- install the new equipment or parts, or check to ensure that work performed by others has been done properly
- modify equipment to meet unique operational or research needs
- teach hospital staff and researchers how to operate equipment.

Much of a biomedical engineering technologist's work involves discussing equipment requirements and the operation of equipment with physicians, administrators, engineers and other professionals.

To keep up with technological advancements, biomedical engineering technologists must spend a considerable amount of time studying technical manuals and attending training sessions provided by equipment manufacturers.

Working Conditions

Biomedical engineering technologists who work in health care facilities may be required to work rotating shifts including weekends and holidays, or to be on call for emergencies. They may be exposed to diseases and must wear protective clothing including rubber gloves and masks in some environments. Working in emergency situations can be stressful.

Biomedical engineering technologists employed by equipment manufacturers or service companies may be required to do a considerable amount of travelling.

Lifting up to 25 kilograms is required.

Personal Characteristics

Biomedical engineering technologists need the following characteristics:

- good communication skills
- the ability to remain patient and tactful with people who may be upset
- the ability to work well under pressure
- the ability to be very precise and accurate.

They should enjoy:

- working in a health care environment
- using standard and specialized equipment to test the performance of components, assemblies and systems
- analyzing and diagnosing problems
- installing or supervising the installation of equipment and systems.

Educational Requirements

The minimum education requirement for biomedical engineering technologists is a **two year diploma in a related technology**.

In Alberta, the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Biomedical Engineering Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, Pure Math 30 (or at least 60 per cent in Applied Math 30) and one of Science 30, Physics 30 or Chemistry 30. An interest in applied sciences (especially physics) is a definite asset.

For information about other post-secondary programs related to electrical and electronics technology, see the Electrical Engineering Technologist and Electronics Engineering Technologist occupational profiles.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Biomedical engineering technologists are employed by:

- regional health authorities
- health care research facilities
- biomedical equipment manufacturers
- third party maintenance companies (contractors).

Public sector employees are unionized under the **Health Sciences Association of Alberta**.

Experienced biomedical engineering technologists may advance to supervisory positions or move into related positions in their employing organizations. Additional education is required to become a biomedical or clinical engineer.

Biomedical engineering technologists are part of the much larger National Occupational Classification 2241: Electrical and Electronics Engineering Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Other Manufacturing**
- **Oil and Gas Extraction**
- **Public Administration**
- **Educational Services**
- **Management, Administrative and Other Support Services**
- **Construction**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,500 Albertans are employed in the Electrical and Electronics Engineering Technologists and Technicians occupational group which is expected to grow 2.4 to 3.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since biomedical engineering technologists form only a small part of the larger occupational group on which this forecast is based, only a small portion of the new positions created will be for biomedical engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electrical and Electronics Engineering Technologists occupational group working part-time or full-time earned from **$22,100 to $126,100 a year.** The average salary was **$74,400 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Biotechnologist

Produced SEPTEMBER 2005

Biotechnologists apply their knowledge of biochemistry, microbiology and molecular genetics to improve industrial processes and develop new processes in the agricultural, chemical and health care product industries (for example, in the production of drugs, antibiotics or vaccines).

NOC Number(s): 2121.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

There are a number of developing specialties in the field of biotechnology including the following:

- **biochemical engineering** - the development of scale-up processes (for example, for fermentation) to produce larger quantities of a substance at one time
- **biochemical production** - the production of chemicals, hormones and other substances in high volumes
- **down-stream processing** - the separation and purification of chemicals and biological products produced by organisms
- **forensic sciences** - the use of deoxyribonucleic acid (DNA) for identification purposes (for example, in criminal cases, paternity suits, mass disasters)
- **genetic engineering** - the transfer of genes from one species to another (in particular, the application of recombinant DNA in producing new substances) or the improvement of genetic properties of plants and animals
- **human cell culture** - the production of antibodies and other useful biological substances
- **industrial microbiology** - the selection and improvement of genetic characteristics for the production of chemical products
- **plant cell culture** - the production of hormones or chemicals by plant cells and the modification of plant cells to improve plants (including plant genetic engineering)

Biotechnologists have made many discoveries that have led to new food sources, improved human health, new pesticides and farm animals that grow twice as big, twice as fast.

Working Conditions

Biotechnologists work in offices and laboratories, and often work evenings and weekends to complete laboratory experiments and other types of research. They must observe safety precautions to prevent injury when working with hazardous laboratory materials.

Personal Characteristics

Biotechnologists need the following characteristics:

- curiosity and imagination
- persistence and a willingness to work long hours
- a willingness to do the reading required to keep up with new developments and discoveries.

They should enjoy synthesizing information and finding innovative solutions to problems, working with equipment and instruments at tasks that require precision, and co-ordinating and supervising the work of others.

Educational Requirements

There is **more than one education route** to becoming a biotechnologist because biotechnology involves the use of principles from many disciplines. Generally, a bachelor of science degree in genetics, microbiology or biochemistry is necessary to work as a biotechnologist performing technical functions. Those considering the field of biotechnology

should consult student advisors in their Faculty to carefully map out appropriate course selections.

A master's or doctoral degree is required to work in high level technical positions. To lead research projects or teach at the post-secondary level, a PhD is usually required.

In Alberta, the following universities offer programs directly related to biotechnology.

- The **University of Alberta** in Edmonton offers B.Sc., M.Sc. and PhD degree programs in Cell Biotechnology, Genetics, Microbiology and Biochemistry.
- The **University of Calgary** offers B.Sc., M.Sc. and PhD degrees in Biochemistry, Botany, Zoology, Cellular, Molecular and Microbial Biology, and Chemical Engineering. The Faculty of Medicine offers a Bachelor of Health Sciences degree program with a specialization in Biomedical Science. The Department of Biochemistry and Molecular Biology offers a Masters in Biomedical Technology program and M.Sc. and PhD programs.
- The **University of Lethbridge** offers four year B.Sc. degree and five year co-operative education programs in Biochemistry and Biological Sciences, and M.Sc. and PhD degree programs in Biomolecular Science.

In general, the entrance requirement for these bachelor's degree programs is a high school diploma or equivalent with a minimum average of 65 to 80 per cent in English 30 or English Language Arts 30-1, Math 30 or Pure Math 30, Chemistry 30, Biology 30 and one other approved 30-level subject (e.g. Physics 30 or Math 31). Specific requirements vary from one program to another.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Employment and Advancement

(section revised JANUARY 2006)

Biotechnologists work for the following types of organizations:

- government and university research laboratories
- hospitals
- pharmaceutical companies
- agricultural product manufacturers
- food processors
- law enforcement forensic laboratories.

Biotechnologists are usually hired for particular projects based on their training and post-doctoral work. Those who have training in economics and management are well prepared for leadership roles in large laboratories and other organizations.

Biotechnologists are part of the larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since biotechnologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for biotechnologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

In Canada, the highest employment growth is in agricultural biotechnology.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists and Related Scientists occupational group working part-time or full-time earned from **$17,000 to $99,400 a year.** The average salary was **$64,600 a year.**

Blaster

Produced MARCH 2005

Blasters break up rock and demolish structures by placing and detonating explosives.

NOC Number(s): 7372.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O I D

Duties

Duties vary depending on the industry in which blasters are employed. For information about blasting-related operations in the oil and gas industry and related services, see the Seismic Workers and Wireline Field Supervisor occupational profiles.

In general, blasters employed in the mining, quarrying or construction industries:

- study requirements, plan drill patterns, determine the depth and diameter of blast holes and conduct field tests, if required, to determine the type explosive and quantity to use
- prepare detonators, fuses, detonating cords, charges and other materials, or supervise the placement of primer charges
- load explosives into blast holes by hand or by using explosives trucks
- check series of electrical wires with blasting galvonometers or blasting multimeters to ensure complete circuits
- use detonating cord, delays, shock tubes and detonators to create blasting circuits
- check blast sites to ensure safety regulations are met
- fire charges
- deal with misfires or missed holes
- check blast sites for hazards such as overhanging rock or harmful fumes
- maintain blast equipment and ensure that safety procedures for handling, storing and moving explosives are followed
- keep records of blast patterns, design, tie-in, times, weather and other relevant information such as seismographic data.

Blasters may direct drilling activities or operate air-track, rotary, down hole or other drilling machines to drill blast holes.

In the construction industry, blasters break up rock and soil, dislodge tree stumps and demolish structures such as buildings or bridges. To avoid damaging surrounding terrain or structures via ground vibration or flying debris, blasters often use a series of small, timed detonations instead of one large explosion.

In the mining industry, blasters prepare and blast large quanitities of rock to improve mine equipment efficiency. Some mining blasts break up hundreds of thousands of tonnes of rock in one blast. Such blasts often involve the preparation and use of thousands of kilograms of pre-packaged or bulk explosives.

Working Conditions

Blasters work primarily outdoors, sometimes in remote or hazardous locations. Working conditions often are noisy and dirty. Occupational risks include explosions, flying particles, falling objects and hazardous chemicals.

Lifting up to 25 kg is required.

Personal Characteristics

Blasters need the following characteristics:

- a safety-conscious attitude
- strength and physical fitness

- good hearing, eyesight and colour vision
- good hand/eye co-ordination and manual dexterity
- an interest in math and science
- the ability to visualize three-dimensional objects from two-dimensional drawings
- good communication skills.

Those employed in underground mines also must be able to work in confined spaces.

All blasters should enjoy operating machinery and performing tasks that require precision, conducting tests and analyzing information, and directing the work of others.

Educational Requirements

Blasters start in entry level positions and advance to more responsible positions as they gain experience. For example, they may start as labourers or heavy equipment operators (for more information, see the Construction Craft Labourer, Heavy Equipment Operator and Underground Miner occupational profiles). Employers may prefer to hire applicants who have a high school diploma or related experience.

Blasters may be trained on the job as blaster helpers or take related courses before moving into blasting positions. In Alberta, surface/demolition blasting courses are offered through Alberta Human Resources and Employment.

Due to the size and quantity of explosives used and the number of people potentially exposed to blasting hazards, detailed knowledge of safe work practices and related explosive manufacturers' specifications is essential for blasters in the mining industry.

Other Requirements

In non-mining industries in Alberta, any worker who handles, prepares or fires an explosive must hold a valid permit issued by Alberta Human Resources and Employment or a valid inter-provincial permit acceptable to AHRE. Blaster permits are issued for a specific blasting operation. To qualify for a blaster's permit, you must have completed an approved course, or have six months of experience under the supervision of a blaster and a recommendation from your employer.

In the mining sector, any worker who handles, prepares or fires an explosive must hold a valid surface mine balster's or underground mine blaster's certificate issued by the Director of Mines (AHRE). To qualify as a surface mine blaster or an underground mine blaster, you must:

- have at least three years of experience in a related surface or underground mining environment.
- submit written evidence that you have received adequate instruction and training under the direction of a certified mine blaster
- pass a written examination administered by the Board of Examiners - Mining
- submit a letter of recommendation from your employer.

Employment and Advancement

(section revised JANUARY 2006)

Blasters in the construction, mining and quarrying industries are employed by:

- construction companies
- surface mining companies (e.g. oil sands companies)
- underground mining companies
- rock quarries
- drilling and blasting contractors.

Employment in the non-mining sector is often seasonal. Employment in the mining sector is usually full-time, year-round.

Blaster is not an entry level position. Experienced blasters may advance to supervisory positions but, without additional education or training, further advancement is limited.

Blasters are part of the Surface Mining, Quarrying and Construction Drillers and Blasters occupational group. In Alberta, over 75 per cent of people employed in this group work in the following industries:

- **Oil and Gas Extraction**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and events affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 300 Albertans are employed in the Surface Mining, Quarrying and Construction Drillers and Blasters occupational group which is expected to grow 5.5 to 6.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Surface Mining, Quarrying and Construction Drillers and Blasters occupational group working part-time or full-time earned from **$20,600 to $64,900 a year.** The average salary was **$31,100 a year.**

Boilermaker

Produced FEBRUARY 2006

Boilermakers build, erect, repair, test and maintain all types of boilers, tanks and pressure vessels, and perform all types of structural and plate work on dust, air, gas, steam, oil, water and other liquid-tight pressure containers.

NOC Number(s): 7262
Minimum Education: Apprenticeship Trade - Grade 11
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M I

Duties

Boilermakers who fabricate and repair boilers, tanks, heat exchangers, fired heaters, reactors and other pressure vessels:

- develop a layout and plan the sequence of work to be done
- lay out plate, sheet steel or other heavy metal and locate and mark bending and cutting lines
- shape the metal using metalworking machines such as shears and drill presses
- cut metal plate and brackets using an oxy-fuel torch and chip and grind parts to shape for fitting together
- fit and tack weld parts together using electric arc welding equipment.

Boilermakers also erect and install boilers, sometime working on scaffolds, and repair and maintain existing boilers and related metal products.

Working Conditions

Boilermakers generally work on construction sites where conditions are often cramped, dirty and involve exposure to chemical vapours, wetness or high noise levels. Traveling may also be considered a necessary part of the job. The normal work week is 40 hours but some overtime may be required. There is always some risk of injury when working with heavy equipment especially at considerable heights.

Boilermakers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Boilermakers need the following characteristics:

- physical strength and stamina
- good co-ordination and manual dexterity
- good mechanical aptitude
- the ability to work in noisy, dirty and cramped conditions
- the ability to work in high places
- the ability to tolerate chemical odours.

They should enjoy working with tools, equipment and machinery. They should also enjoy doing precision work that involves a degree of excitement and variety.

Educational Requirements

To work in Alberta, boilermakers must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 11 education with Math 20 or 23 or Pure Math 20 or Applied Math 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Good marks in math, physics, drafting and industrial arts are particularly important.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,500 hours of on-the-job training each year. There are two six-week blocks of technical training in the first year and one six-week block in the second and third. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Boilermaker apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Boilermakers are employed in the following industries:

- metal fabricating
- construction (pulp mills, mine mills, generating and oil and gas plants)
- shipbuilding
- rail transport
- petrochemical and coal products
- electric power
- iron and steel
- oil and gas.

Boilermakers may advance to supervisory positions such as foreman or superintendent. Alberta certified journeyman boilermakers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as boilermakers work in the following industries:

- **Construction**
- **Oil and Gas Extraction**
- **Metals, Metal Fabrication and Machinery Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 650 Albertans are employed in the Boilermakers occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice boilermakers earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 75 per cent in the second and 90 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$23 to $31 an hour plus benefits** (2005 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Boilermakers occupational group earned **up to $79,300 a year.** The average salary was **$55,200 a year**.

Bricklayer

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Bricklayers construct and repair structures such as walls, partitions, patios, arches, fireplaces and chimneys by preparing and laying brick and other masonary units.

NOC Number(s): 7281
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

Bricklayers work with masonry materials such as brick, concrete blocks, granite stones, structural tile and precast panels. They also lay or install fire brick or castable materials in commercial and industrial furnaces and incinerators, and acid tile and acid brick in pulp mills.

Duties vary from one position to another but, in general, bricklayers:

- interpret drawings and blueprints, and calculate the materials required
- measure using a plumb line and mason's level to ensure each layer is level
- spread mortar on each brick and lay them into position
- remove excess mortar around the brick
- use a hammer and chisel or a masonry saw to cut bricks to fit.

Working Conditions

Bricklayers usually work outdoors, often on scaffolding. They sometimes use protective enclosures and portable heaters in adverse weather conditions. The work is physically demanding and some travel may be required to get to various work sites. Bricklayers work a five-day, 40-hour week with overtime sometimes required to meet construction schedules.

Bricklayers routinely lift items weighing up to 25 kilograms.

Personal Characteristics

Bricklayers need the following characteristics:

- physical strength and stamina
- manual dexterity and good sense of balance
- the ability to get along well with co-workers
- an eye for colour, line and proportion.

They should enjoy working with their hands and have a sense of creativity.

Educational Requirements

Bricklayers must know the properties of various mortars and other bonding materials and how to handle different types of masonry units.

To work in Alberta, bricklayers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Courses in math and science are particularly important.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,600 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Bricklayer apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at at the Southern Alberta Institute of Technology (SAIT) in Calgary and by mobile delivery in Edmonton.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Bricklayers are employed by special trade, building and general contractors. Some bricklayers are self-employed, usually contracting on small jobs such as patios and fireplaces.

Many bricklayers stay in the trade until they retire. Others advance to estimator, inspector or foreman positions. Alberta certified journeyman bricklayers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, most people employed as bricklayers work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,200 Albertans are employed in the Bricklayers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice bricklayers earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 80 per cent in the second year and 90 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$24 to $30 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Bricklayers occupational group ranged from **$41,600 to $79,900 a year.** The average salary was **$64,800 a year**.

Broadcast Maintenance Technologist

Produced JULY 2004

Broadcast maintenance technologists install, test, inspect, modify, repair and maintain radio and television broadcasting systems.

NOC Number(s): 5224
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

All audio, video and other technical equipment in studios and at remote locations or transmitter facilities must be regularly tested, adjusted, cleaned and inspected. When a problem is detected, broadcast maintenance technologists repair and restore equipment to proper operating condition.

Broadcast maintenance technologists maintain and repair a wide variety of equipment, including:

- television cameras
- video switching and mixing equipment
- audio mixers
- video and audio recorders and servers
- video and audio effects equipment
- editing equipment
- microphones and sound equipment
- lighting equipment
- microwave equipment
- computer and networking equipment
- remote broadcast equipment
- transmitters and transmission equipment
- analogue and digital equipment and converters.

In general, broadcast maintenance technologists:

- construct, assemble, wire and install items such as control panels, chassis, cabinets and related equipment
- build or modify special broadcast equipment
- design and document systems using AutoCAD and cable database management systems
- ensure that the power levels and frequency of the station's broadcast signal meet government regulatory requirements and that broadcast signals are consistently clear and reliable
- set up equipment at remote locations.

Depending on the size of the broadcast company, maintenance technologists may:

- divide their time between repairing and maintaining equipment at the station and visiting the transmitter(s)
- work exclusively at the station or mobile trailers or at transmitter and rebroadcast facilities.

Working Conditions

Maintenance technologists generally work indoors. They frequently work with small hand tools and electronic test equipment. Some heavy lifting may be required.

Broadcast maintenance technologists usually work shifts, including evenings, weekends and holidays. They may be required to remain on stand-by during their time off in case emergency repairs are needed at the station or at transmitter facilities. Overtime may be required to meet broadcast deadlines.

Technologists who work for broadcast companies that have a large number of rebroadcasting facilities may be required to travel extensively to visit these facilities.

Personal Characteristics

Broadcast maintenance technologists need the following characteristics:

- an aptitude for electrical and mechanical work
- a keen interest in electronics and computers
- the ability to perform precise, co-ordinated hand movements
- good analytical and technical problem-solving skills
- patience and persistence
- excellent communication and interpersonal skills
- good hearing.

They should enjoy setting up and operating equipment, and trouble-shooting technical problems.

Educational Requirements

Broadcast maintenance technologists need at least **two years of post-secondary training in broadcast electronics**.

In Alberta, the **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Broadcast Technology diploma program. The admission requirement is a high school diploma with English 30 and Pure Math 30 or equivalent and a 20-level science course, or successful completion of the Pre-Careers program at SAIT.

After they are hired, inexperienced broadcast maintenance technologists receive further on-the-job training.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary. The Society of Broadcast Engineers (SBE) and Alberta Society of Engineering Technologists (ASET) offer certification for graduates of recognized education programs.

Employment and Advancement

(section revised JANUARY 2006)

Broadcast maintenance technologists work for:

- radio and television broadcasting networks and stations
- recording studios
- production facilities
- multi-media enterprises
- entertainment venues
- broadcast equipment companies (in sales and technical support positions).

In some cases, broadcast maintenance technologists are hired on a contract basis.

Experienced broadcast maintenance technologists may advance to supervisory positions such as senior technologist or chief engineer.

Broadcast maintenance technologists are part of the larger National Occupational Classification 5224: Broadcast Technicians. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 450 Albertans are employed in the Broadcast Technicians occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since broadcast maintenance technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for broadcast maintenance technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Employment growth is best for broadcast maintenance technologists who are willing to relocate.

Salary

(section revised OCTOBER 2005)

Salaries for broadcast maintenance technologists vary depending on the technologist's experience and training, and the size of the broadcast company.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Broadcast Technicians occupational group ranged from **$17,200 to $36,600 a year.** The average salary was **$49,300 a year**.

For more detailed information, see ASET's Annual Salary Surveys.

Building Operator

Produced FEBRUARY 2005

Building operators are responsible for the day-to-day maintenance and operation of large buildings that have complex heating, mechanical and electrical systems.

NOC Number(s): 6663, 7351
Minimum Education: Less than high school
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O I; O i m**

Duties

Building operators are responsible for overall building operation and maintenance, and for dealing with emergencies. Their duties vary depending on the type of building but, in general, they:

- routinely inspect interior and exterior spaces and equipment
- monitor the performance of heating, electrical, mechanical and security systems and trouble-shoot problems
- report problems and recommend changes to improve efficiency, reduce operating costs or comply with environmental, building and safety codes
- perform routine equipment maintenance tasks and keep maintenance records
- monitor access to restricted areas such as the roof and telecommunications equipment and ensure that they are kept safe, clean, functional and accessible
- perform or oversee housekeeping and groundskeeping duties
- respond to emergencies such as power failures, floods and fires
- organize and conduct fire drills
- respond to complaints from building tenants and act as a liaison between tenants and owners
- supervise the work of maintenance personnel and contractors hired to make repairs
- maintain an inventory of supplies and equipment, and make recommendations regarding the purchase of new equipment.

Building operators often use computers to monitor equipment performance and for administrative tasks.

Working Conditions

Building operators generally work 36 to 40 hours a week. They may be required to work shifts and be on call at specified times. Overtime may be required when equipment malfunctions.

Building operators may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Building operators need the following characteristics:

- good communication and interpersonal skills
- mechanical aptitude and skills
- good problem-solving skills
- good organizational skills
- the ability to work with little supervision
- the ability to respond quickly and appropriately in emergency situations.

They should enjoy having clear rules and guidelines, operating equipment and solving problems by experimenting.

Educational Requirements

Although there is **no standard minimum education** requirement, building operators need a basic understanding of environmental health and safety legislation, and the design, operation and maintenance of building systems. Employers generally require applicants to have a Fifth Class Power Engineering certificate and may require one or more of the following:

- first aid certificate
- WHMIS (Workplace Hazards Management Information System) certificate
- Alberta Human Resources and Employment "Safety in the Workplace" certificate
- valid driver's license
- experience supervising the work of others
- journeyman certificate in one or more trades.

Power engineering courses are offered by many colleges and institutes of technology in Alberta (for more information, see the Power Engineer occupational profile).

Organizations such as the **Building Owners and Managers Association (BOMA)** and the **Real Estate Institute of Canada (REIC)** also may offer related training. Continuing education programs may be offered on an as needed basis.

Employment and Advancement

(section revised JANUARY 2006)

Building operators are employed by:

- federal, provincial and local governments
- school boards and post-secondary institutions
- regional health authorities
- property management and real estate companies
- hotels
- shopping malls
- factories
- other owners and operators of large buildings such as office highrises.

With additional education, experienced building operators may advance to supervisory positions such as chief engineer or operations manager.

Building operators may be classified in the National Occupational Classification 6663: Janitors, Caretakers and Building Superintendents occupational group or NOC 7351: Stationary Engineers and Auxiliary Equipment Operators.

In Alberta, over 75 per cent of people employed in the Janitors, Caretakers and Building Superintendents classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Educational Services**
- **Finance, Insurance and Real Estate**
- **Health Care and Social Assistance**
- **Accommodation and Food Services**
- **Repair, Maintenance, Personal and Other Services**.

Over 75 per cent of people employed in the Stationary Engineers and Auxiliary Equipment Operators classification work in the following industries:

- **Utilities**
- **Health Care and Social Assistance**
- **Educational Services**
- **Oil and Gas Extraction**
- **Food and Beverage Products Manufacturing**
- **Mineral Products Manufacturing**
- **Public Administration**
- **Management, Administrative and Other Support Services**.

The employment outlook in these occupational groups will be influenced by a wide variety of factors including:

- building activity and trends and events affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)

- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 22,850 Albertans are employed in the Janitors, Caretakers and Building Superintendents occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 350 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Over 1,950 Albertans are employed in the Stationary Engineers and Auxiliary Equipment Operators occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since building operators form only a part of two larger occupational groups, only a portion of the new positions created will be for building operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries vary considerably depending on the building operator's qualifications, the responsibilities of the position, and the location and size of the employing organization.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the:

- Janitors, Caretakers and Building Superintendents occupational group working part-time or full-time earned from **$10,800 to $70,400 a year.** The average salary was **$23,400 a year.**
- Stationary Engineers and Auxilliary Equipment Operators occupational group working part-time or full-time earned from **$21,600 to $78,400 a year.** The average salary was **$57,300 a year.**

Building Superintendent

Produced DECEMBER 2005

Building superintendents maintain and manage commercial, institutional and residential properties.

NOC Number(s): 6663
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O I**

Duties

Building superintendents are representatives of property owners or managers (for more information, see the Property Manager occupational profile). Their responsibilities vary from one position to another but, in general, building superintendents:

- ensure a high standard of building cleanliness, inside and out
- make sure that heating, ventilation, power and other mechanical equipment operates effectively
- supervise workers and contractors in the care, cleaning and maintenance of buildings and do minor repairs themselves (for example, fix door hardware themselves)
- co-ordinate renovation projects
- act as a liaison between owners or managers and tenants
- respond to requests and complaints
- keep records
- prepare and work within budgets
- may operate equipment such as lawn mowers or front end loaders.

For information about the day-to-day maintenance and operation of large buildings that have complex heating, mechanical and electrical systems, see the Building Operator occupational profile.

Working Conditions

Building superintendents for large buildings and property management companies generally work a 40 hour week. They may be required to work shifts and be on call at specified times. Building superintendents in smaller residential complexes may work part-time and, if they live in the buildings they maintain, may be on call at specified times.

Building superintendents must be sufficiently mobile to move around building complexes quickly and easily. Their work may involve lifting items weighing up to 25 kilograms.

Personal Characteristics

Building superintendents need good communication and interpersonal skills.

They should enjoy having clear rules and guidelines, operating equipment and solving problems by experimenting.

Educational Requirements

Although there is no standard minimum education requirement, building superintendents need a basic understanding of environmental health and safety issues, and the design, operation and maintenance of building systems. Some employers require applicants to have a:

- first aid certificate
- WHMIS (Workplace Hazards Management Information System) certificate
- a Safety in the Workplace certificate from Alberta Human Resources and Employment
- journeyman certificate in one or more trades
- Fourth Class or Fifth Class Power Engineering certificate.

Power engineering courses are offered by many colleges and institutes of technology in Alberta (for more information, see the Power Engineer occupational profile).

NorQuest College in Edmonton offers a seven week, full-time Building Service Worker certificate program that includes two weeks of work experience. Applicants must be at least 18 years of age, physically fit and complete a reading test. NorQuest also offers a 20 week, full-time Building Service Supervisor program.

Organizations such as the **Building Owners and Managers Association (BOMA)**, **International Facility Management Association (IFMA)** and the **Real Estate Institute of Canada (REIC)** also may offer related training.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check institution calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Building superintendents are employed by property management companies and owners of office buildings, factories, hospitals, hotels, apartment buildings, schools or institutions. Most building superintendents are employed in urban areas.

Building superintendents are part of the larger National Occupational Classification 6663: Janitors, Caretakers and Building Superintendents. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Educational Services**
- **Finance, Insurance and Real Estate**
- **Health Care and Social Assistance**
- **Accommodation and Food Services**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 22,850 Albertans are employed in the Janitors, Caretakers and Building Superintendents occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 350 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since building superintendents form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for building superintendents.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Janitors, Caretakers and Building Superintendents occupational group working part-time or full-time earned from **$10,800 to $70,400 a year.** The average salary was **$23,400 a year.**

Bus Driver

Produced SEPTEMBER 2003

Bus drivers transport passengers from place to place along established routes. They may operate transit buses, motor coaches or school buses.

NOC Number(s): 7412.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M S

Duties

Bus drivers' duties and responsibilities vary depending on the type of vehicle they operate and the type of service but, in general, bus drivers:

- operate vehicles in a safe and courteous manner
- follow established routes and time schedules or drive to charter destinations
- inspect vehicles before and after trips
- submit simple reports at the end of each shift
- submit accident reports when necessary.

Transit bus drivers also issue transfers, check bus passes and collect fares, and answer questions about bus routes, schedules and specific buildings.

Motor coach drivers may drive from city to city or operate local tour buses. In addition to driving, tour bus operators may greet sightseers and provide commentary during tours and charter trips.

School bus drivers transport students to and from schools. Their routes may be along busy city streets or over rural roads.

Working Conditions

All drivers must deal with difficult passengers and the hazards associated with driving in bad weather conditions, on poor driving surfaces and/or in heavy traffic. They often work shifts including evenings, weekends and holidays.

School bus drivers work weekdays before and after school hours but may also drive students on field trips during or outside of school hours. Drivers who transport special needs students must load and unload mobility aids and lift children into seats.

Transit bus drivers often work changing shifts for several years before they get regular routes and regular shifts. Many drivers work part-time or split shifts.

Drivers employed by long distance bus lines and tour companies may be required to load and unload luggage and parcels weighing up to 45 kilograms into luggage compartments.

Personal Characteristics

Bus drivers need the following characteristics:

- good health and vision
- good communication skills
- the ability to be diplomatic and courteous in dealing with the public, from the first passenger to the last passenger each day
- the ability to remain alert and maintain a high level of concentration
- good judgement and the ability to react quickly in emergency situations.

They should enjoy driving, taking a methodical approach to recording information and inspecting vehicles, and talking to people.

Educational Requirements

There are **no standard education requirements** for bus drivers. However, individual employers may specify a minimum education requirement (e.g. Grade 11 or equivalent training and experience).

Employers prefer to hire bus drivers who have:

- good customer service skills
- experience dealing with the public
- experience driving larger vehicles
- emergency first aid certification
- a clear driving record.

In Alberta, a system of **Classified Driver Licensing** sets medical standards and licensing requirements for handling specific types vehicles. Employers may provide the training required to allow newly-hired bus drivers to upgrade their Alberta Class 5 operator's license to the required **Class 2** level. Depending on the type of bus, an air brakes endorsement may be required as well. Some bus lines require motor coach drivers to have a Class 1 license.

Many bus line and transit companies provide training programs (three to six weeks long) for new bus drivers. The training covers basic driving skills and traffic laws, bus schedule information, and customer service training.

In Alberta, Class 2 School Bus driving programs are offered by:

- some public colleges
- private vocational schools.

Program length, costs and admission requirements vary. However, applicants are generally required to be at least 18 years of age and have a valid Alberta Class 5 driver's licence. A clear driving record or minimum number of demerits and/or a medical examination may also be required.

Before enrolling in any program, prospective students should discuss their training and employment options with experienced bus drivers and potential employers.

Employment and Advancement

(section revised JANUARY 2006)

Bus drivers are employed by:

- municipal transit systems
- school bus companies
- long distance and tour bus lines
- charter bus services.

Most positions are part-time. Large transit systems may use video-based selection tools and written tests to screen job applicants.

With experience and initiative, some drivers move into positions in related areas such as dispatching, office management, safety, training or vehicle maintenance.

Bus drivers are part of the larger National Occupational Classification 7412: Bus Drivers and Subway and Other Transit Operators. In Alberta, over 75 per cent of people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 9,800 Albertans are employed in the Bus Drivers and Subway and Other Transit Operators occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 120 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since bus drivers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for bus drivers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Bus drivers' earnings vary considerably depending on location and employer. Motor coach drivers may earn hourly wages or flat fees on a contract basis for tours and special charters. Long distance drivers may be paid by the mile. School bus drivers work an average of 180 days per year and are paid on a daily or flat rate basis.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Bus Drivers and Subway and Other Transit Operators occupational group working part-time or full-time earned from **$11,300 to $24,800 a year.** The average salary was **$27,600 a year.**

Bus Line Ticket Agent

Produced OCTOBER 2003

Bus line ticket agents provide information and sell tickets to passengers travelling by motor coach.

NOC Number(s): 6434.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S O**

Duties

Bus line ticket agents' duties and job titles vary from one employer to another but, in general, they:

- answer telephone and in-person inquiries about routes, time schedules and rates
- help customers plan travel times and routes
- make and confirm seat reservations
- calculate expenses and issue tickets
- accept payment
- direct passengers to their points of departure.

In large bus companies, the duties of reservation agents in centralized ticket offices are different from the duties of counter service agents in depots. Reservation agents answer telephone inquiries and confirm reservations. Counter service agents sell tickets at ticket counters. At small bus stops, a hotel or restaurant proprietor may perform the duties of a counter service agent.

Working Conditions

Most bus line ticket agents work shifts, including evenings, weekends and holidays. During vacation seasons and holidays, they may be required to work overtime. The work environment can be hectic and some customers can be difficult to deal with, especially when poor weather conditions cause delays.

Personal Characteristics

Bus line ticket agents need the following characteristics:

- a neat and friendly appearance
- good communication skills and speaking voice
- the ability to deal tactfully with the public.

They should enjoy copying and recording information, dealing with people and operating computer ticketing systems.

Educational Requirements

Most bus lines require ticket agents to have **a high school diploma and/or work experience in clerical, sales or related public contact positions.** Ticket agents need exceptional customer service skills, should be bondable (acceptable to an insurance company as a responsible, law-abiding citizen) and have the keyboarding skills required to operate computer terminals.

New bus line employees are **trained on the job**, first on fares and schedules, then on making up tickets.

Employment and Advancement

(section revised JANUARY 2006)

Bus line ticket agents are usually employed in or near urban centres. Large employers generally select ticket agents from among their current employees.

Bus line ticket agents may advance to supervisory positions such as customer service representative, cargo agent or reservation agent. However, competition for these positions is usually keen and there are few other advancement opportunities.

Bus line ticket agents are part of the larger National Occupational Classification 6434: Ticket Agents, Cargo Service Representatives and Related Clerks (Except Airline). In Alberta, over 75 per cent of the people employed in the classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 400 Albertans are employed in the Ticket Agents, Cargo Service Representatives and Related Clerks (Except Airline) occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since bus line ticket agents form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for bus line ticket agents.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Ticket Agents, Cargo Service Representatives and Related Clerks (Except Airline) occupational group ranged from **$13,400 to $29,600 a year.** The average salary was **$24,300 a year**.

Bylaw Enforcement Officer

Produced APRIL 2003

Bylaw enforcement officers are employed by municipalities to enforce local bylaws. In some cases, they may also be appointed as special constables to enforce certain provincial statutes in their municipality or county jurisdiction.

NOC Number(s): 6463.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D s**

Duties

The responsibilities of bylaw enforcement officers vary considerably from one municipality to another. In smaller jurisdictions, a bylaw enforcement officer may look after a wide range of bylaws including traffic control, animal control, business licensing and weed control. In large urban centres, bylaw enforcement officers may specialize in checking and enforcing specific bylaws.

In general, bylaw enforcement officers may:

- respond to complaints from local citizens, elected officials and businesses
- discuss the requirements of the bylaw with the people involved and attempt to reach an understanding and obtain voluntary compliance with the bylaw
- enforce bylaws by issuing orders to correct problems such as unsightly property
- correct problems when orders are not obeyed by arranging for required work to be done and invoicing the property owner
- enforce bylaws by issuing violation tickets, traffic tags or summonses and subpoenas, and prepare related legal documents
- set up and maintain a traffic fine system
- use specialized equipment related to specific bylaws (e.g. weights and measures, noise level instruments, auto samplers for taking chemical samples)
- investigate bylaw offences to prepare for court proceedings
- appear in court and give testimony related to the prosecution of a bylaw offender.

The municipalities that hire bylaw enforcement officers define the powers they may use on the job. A municipality may apply to Alberta Justice to have a bylaw enforcement officer appointed as a special constable.

Working Conditions

Bylaw enforcement officers may work shifts, including evenings and weekends. Other working conditions also vary depending on which bylaws they enforce. For example, they may have to deal with hazardous goods or aggressive animals. In some circumstances, bylaw enforcement officers are required to lift items weighing over 25 kilograms.

Personal Characteristics

Bylaw enforcement officers need the following characteristics:

- strong verbal and written communication skills
- the ability to handle potential conflict situations
- good observation, problem-solving and decision-making skills
- the ability to work with a minimum of supervision
- the ability to react quickly and with good judgement.

They should enjoy having established policies and procedures to guide their work, enforcing regulations and dealing with people.

Educational Requirements

(section revised JUNE 2005)

Many municipalities hire bylaw officers and train them on the job. Job applicants should have:

- at least a high school education
- up to two years of related experience
- a working knowledge of the provincial court system
- knowledge of proper investigative and interviewing techniques
- a valid driver's licence with a clean driving abstract
- a current Standard First Aid certificate
- computer skills for inputting and retrieving data.

Most employers prefer to hire bylaw enforcement officers who have a **related two year post-secondary diploma or degree**. In Alberta, education programs related to law enforcement are offered by the following post-secondary institutions:

- **Athabasca University** offers a four year Bachelor of Professional Arts degree program in Criminal Justice. This program is available to students who have a two year diploma in criminal justice-related areas from an accredited college or technical institute program.
- **CDI College of Business, Technology and Health Care** in Calgary and Edmonton offers a 42-week Policing and Protection Services program.
- **Columbia College**, a private vocational school in Calgary, offers Criminal Justice Certificate and Diploma programs. These programs may be taken as 25-week full-time programs or 50-week part-time programs. The entrance requirements for the Certificate program are a high school diploma with at least 60 per cent in English 30 and Math 30 or equivalent, a successful interview and a criminal record check.
- **Grant MacEwan College** in Edmonton offers a two year Police and Security diploma program with a specialization in Police Studies. The entrance requirement is a high school diploma or equivalent with at least 65 per cent in English 30 (or at least 75 per cent in English 33 or a skills assessment). A criminal record check and fitness test are required. Grant MacEwan College also offers a nine month Aboriginal Police Studies program.
- **Lethbridge Community College** offers a two year Criminal Justice Diploma. The entrance requirement is a high school diploma or equivalent. Applicants are required to take a computerized placement test, complete a questionnaire and attend an interview with a faculty member. A medical examination and eyesight/colour vision testing are recommended. Lethbridge Community College also offers a Criminal Justice certificate designed for aboriginal people.
- **Medicine Hat College** offers a two year Police and Security diploma program with a Police major. The entrance requirements are a high school diploma with at least 60 per cent in English 30 or equivalent, and completion of a Standard First Aid and CPR certificate. An interview and program orientation are required, and a physical fitness test may be required. This program is offered in partnership with Grant MacEwan College.
- **Mount Royal College** in Calgary offers a four year applied degree program in Justice Studies. The entrance requirement is a high school diploma with English 30, Pure or Applied Math 30 and Social Studies 30, or equivalent.
- **Northern Lakes College** in Grouard offers a 10 month Aboriginal and Community Policing certificate program. Applicants must be at least 19 years old and have successfully completed English 23 and Math 13 or Applied Math 10 or equivalent. A valid driver's licence, criminal record check, fitness assessment, medical exam and personal interview are also required. Graduates of this program may apply for credit toward police and security programs at Lethbridge Community College, Grant MacEwan College or Athabasca University.
- **NorQuest College** in Edmonton offers a 40-week Aboriginal Policing and Security certificate program. Applicants must be at least 19 years old and have successfully completed a Grade 10 English and Math or equivalent. A valid driver's licence, fitness assessment and medical exam are also required.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Arts (BA) degree program in criminology. The entrance requirement is completion of one year of an undergraduate degree program (usually an Arts program) with a minimum grade point average of 6.0/9. This is a quota program so higher than minimum marks may be required for admission. Two letters of reference and personal suitability for employment in the criminal justice system are also required.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

The only employers of bylaw enforcement officers are municipal councils and city bylaw departments. Depending on the size of the municipality, bylaw officers may work alone or as part of a small group of bylaw officers. Many jurisdictions employ bylaw enforcement officers on a contract basis.

With several years of experience, bylaw officers in larger centres may advance to supervisory positions.

Bylaw enforcement officers are part of the larger National Occupational Classification 6463: By-law Enforcement and Other Regulatory Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 250 Albertans are employed in the By-law Enforcement and Other Regulatory Officers occupational group which is expected to grow up 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since bylaw enforcement officers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for bylaw enforcement officers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the By-law Enforcement and Other Regulatory Officers occupational group working part-time or full-time earned from **$20,100 to $86,500 a year.** The average salary was **$43,500 a year.**

Cabinetmaker

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Cabinetmakers build and repair custom or production-type fixtures and furniture made of wood or wood substitutes.

NOC Number(s): 7272
Minimum Education: Apprenticeship Trade - Grade 11
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

Cabinetmakers who build a typical wood unit such as a kitchen cupboard:

- read specifications and drawings
- make layouts and patterns
- set up and operate woodworking equipment
- cut, shape, mould and assemble components of wood and wood substitutes
- sand wooden surfaces
- apply veneer, stain, polish or plastic laminates to finished surfaces.

Cabinetmakers who produce custom-made products:

- discuss projects with customers and draw up detailed specifications
- estimate the amount and type of material needed and the cost
- select the wood
- cut, measure and produce pieces of a project
- assemble the product by gluing, clamping, dowelling, nailing and screwing pieces together
- scrape and sand the unit and apply a finish such as paint, stain, plastic laminate, varnish or lacquer
- repair or restyle wooden furniture and fixtures
- install retail or residential cabinetry.

In large cabinet shops furnished with high-tech computer controlled equipment, cabinetmakers may specialize only in one or two of the functions listed above.

Working Conditions

Cabinetmakers work indoors, generally in a shop environment exposed to a high noise level, some airborne sawdust and chemicals from painting and stripping. There is some risk of injury when working with high-speed woodworking machinery.

Cabinetmakers may be required to lift equipment or supplies weighing over 25 kilograms.

Personal Characteristics

Cabinetmakers need the following characteristics:

- good eyesight to select woods and look for surface imperfections
- good hand-eye co-ordination and manual dexterity
- the ability to visualize a finished product from drawings, blueprints or other specifications.

They should enjoy creating things with their hands and doing precision work.

Educational Requirements

To work in Alberta, cabinetmakers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 11 education with Math 20 or 23 or Pure Math 20 or Applied Math 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,360 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Apprentices are required to provide their own tools.

Applicants who have related training or work experience may be eligible for credit or certification.

Cabinetmaker apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Northern Alberta Institute of Technology (NAIT) in Edmonton
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Outside the apprenticeship program, the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Millwork and Carpentry certificate program with a specialization in cabinetmaking. The entrance requirement is Grade 10 with English and math.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information on programs and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Cabinetmakers are employed in custom shops or are self-employed.

Many cabinetmakers stay in the trade until they retire. They may set up their own shops or advance to supervisory positions. Alberta certified journeyman cabinetmakers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as cabinetmakers work in the following industries:

- **Construction**
- **Other Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,650 Albertans are employed in the Cabinetmakers occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice cabinetmakers earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year of apprenticeship, 65 per cent in the second, 75 per cent in the third and 85 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$14 to $19 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Cabinetmakers occupational group working part-time or full-time earned from **$19,700 to $67,700 a year.** The average salary was **$39,200 a year.**

Call Centre Agent

Produced NOVEMBER 2005

Call centre agents respond to questions and inquiries, resolve customer problems and provide information about company policies, products and services over the phone, by fax and via the Internet.

NOC Number(s): 1453.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S i**

Duties

Duties and responsibilities vary from one organization to another but, in general, call centre agents:

- respond to telephone calls and e-mail
- provide information about services, policies or products
- obtain and process the information required to serve customers and solve problems
- keep transaction records
- update and maintain databases of information
- arrange billing or accept credit card payments for products and services
- investigate customer complaints and arrange for refunds, exchanges or credit when appropriate.

In some organizations, call centre agents also handle inquiries from walk-in customers.

Working Conditions

Call centre agents work in an automated office environment. Depending on the employer, they may work shifts. Some call centres operate 24 hours a day, seven days a week.

Call centre agents work in a technologically measured environment in which there may be little privacy. Managers may record conversations and track how agents spend their time. Handling high numbers of calls and working in an environment of rapid technological change can be stressful.

Personal Characteristics

Call centre operators need the following characteristics:

- a pleasant telephone voice that conveys sincerity and confidence
- commitment to providing good customer service
- good written and oral communication skills
- organization and multi-tasking skills
- the ability to work independently or as part of a team
- the ability to remain interested and focused when repeating information
- the ability to think quickly and respond to complaints smoothly and tactfully.

They should enjoy taking a methodical approach to their work, talking to people and providing information.

Educational Requirements

There is no standard education requirement for call centre agents but most employers prefer to hire applicants who have a high school diploma or some post-secondary education. Sales experience and strong computer and keyboarding skills are definite assets. Some employers require job applicants to have qualifications related to their industry. For example, banks may require applicants to have a background in the finance industry; retailers may require post-secondary education related to the types of products they sell.

Call centre agents are usually **trained on the job**. They need to learn about the employer and its products, services and policies so they can talk about them confidently and answer questions correctly.

The **Academy of Learning**, a private vocational school in Calgary, Edmonton, High River and Red Deer, offers a 825 hour (35 week) Customer Service/Call Centre Operator program. The entrance requirement is a high school diploma or equivalent, or mature student admission.

Continuing education programs are often offered on an as needed basis.

Employment and Advancement

(section revised JANUARY 2006)

Call centre agents are employed by:

- insurance companies
- telephone companies
- power, water and gas utility companies and contractors
- retail establishments
- wholesale establishments such as mail-order and Internet-based companies
- educational institutions
- other organizations with a strong customer service orientation.

Experienced operators may be able to advance to supervisory or training positions. Further advancement generally requires additional education.

Call centre agents are part of the larger National Occupational Classification 1453: Customer Service, Information and Related Clerks. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Information, Culture and Recreation**
- **Retail Trade**
- **Transportation and Warehousing**
- **Finance, Insurance and Real Estate**
- **Public Administration**
- **Utilities**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 15,600 Albertans are employed in the Customer Service, Information and Related Clerks occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 180 to 350 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since call centre operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for call centre agents.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Call Centre Agents occupational group working part-time or full-time earned from **$15,300 to $73,300 a year.** The average salary was **$37,100 a year.**

Canadian Forces Personnel - Commissioned Officer

Produced JANUARY 2005

Commissioned officers plan, organize, lead and manage operations and training activities in the Canadian Forces.

NOC Number(s): 0643
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover (occupational growth information is not available)
Interests: **D M s**

Duties

Commissioned officers perform some or all of the following duties:

- plan, organize and command the activities of military combat units and crews on ships and aircraft
- develop and implement military procedures and policies
- direct subordinates in training, and co-ordinate and direct the activities of the units under their command
- assume responsibility for the welfare, morale and discipline of their units
- review unit performance, prepare reports and provide briefings for superiors
- command and lead units as part of United Nations' peace-keeping or peace-making forces.

Commissioned officers are classified in the following groups:

Aerospace Control
Aerospace Engineering
Air Field Engineering
Air Navigation
Air Operations
Armour
Artillery
Chaplain
Combat Engineering
Communications and Electronics Engineering
Dental
Electrical and Mechanical Engineering
Flight Engineering
Health Care Administration
Infantry
Legal
Logistics
Maritime Engineering
Maritime Surface and Sub-surface
Medical
Military Police
Nursing
Personnel Selection
Pharmacist
Physiotherapist
Pilot
Public Affairs
Social Work
Training Development

Working Conditions

Commissioned officers must adhere to Canadian Forces dress regulations and wear uniforms when on duty. Other working conditions vary a great deal.

Commissioned officers may be posted anywhere in Canada or overseas, and are subject to transfer. Some assignments involve exposure to dangerous situations.

Personal Characteristics

Commissioned officers need the following characteristics:

- leadership ability
- team skills
- physical fitness
- self-discipline, perseverance and initiative
- the ability to conform to rules
- maturity and good judgment
- good communication skills.

They should enjoy co-ordinating information to command activities, implementing miltary policies and procedures and supervising subordinates.

Educational Requirements

There are several entry plans for commissioned officers in the Canadian Forces. For each plan, candidates must:

- be Canadian citizens
- meet age requirements and basic medical and physical standards
- have no outstanding obligations to the judicial system
- be willing to relocate.

Entry is competitive and not all entry plans are open at all times. Candidates for specific classifications are recruited only when there is a forecasted need for personnel in those classifications. When openings are forecast, applications on file are reviewed and candidates selected.

There are six entry plans:

1. Regular Officer Training Plan (ROTP)
   - This entry plan is for candidates who want to obtain a degree at a military college or civilian university, subsidized by the Canadian Forces.
   - Applicants must be at least 16 years of age and completing a course of study leading to an advanced high school diploma with English 30 or French 30 and Math 30 (Math 31 recommended). Applicants for science and engineering programs must have Physics 30, Chemistry 30 and Math 31. Applicants for the preparatory year must be in a program of study leading to the completion of Grade 11 in an advanced high school curriculum.
   - There is a mandatory period of service of up to five years after graduation. Seven years is standard for pilots.
2. Reserve Entry Training Plan (RETP)
   - This entry plan is for candidates who want to obtain a degree at a military college at their own expense. RETP cadets are not paid during the academic year, but are employed in the summer. Scholarships, bursaries and cadetships are available.
   - The entry requirements are the same as those for the ROTP.
   - There is no mandatory period of service in the regular forces.
3. Direct Entry Officer (DEO)
   - This entry plan is for candidates who already hold an appropriate university degree or technology diploma for the classification they wish to enter.
   - After wings graduation, there is a seven-year mandatory period of service for Pilot and four years for Air Navigator.
4. Medical Officer Training Plan (MOTP)
   - This entry plan is designed to subsidize candidates who have been accepted without condition in any of the last three years of a medicine program at a Canadian university or are in their first or second year of internship and are within 57 months of obtaining a license to practice medicine.
   - There is a three year period of mandatory service, after a license to practice is obtained, for those whose training

was subsidized for 46 months or less (four years for those subsidized longer).

5. Dental Officer Training Plan (DOTP)
   - This entry plan is designed to subsidize candidates who have been accepted without condition into any of the last four years of a dentistry program at a Canadian university.
   - The period of mandatory service varies depending upon how long the candidate's training was subsidized.

6. Dietetic Internship Training Program (DITP)
   - This entry plan is for candidates who already have a bachelor degree with a major in nutrition and/or food services administration and who wish to intern in a military or civilian environment.
   - There is a three year mandatory period of service.

All officers must successfully complete a basic training course which is conducted for most classifications at **Canadian Forces Leadership and Recruitment School** in St. Jean, Quebec. Unless they are fluently bilingual at the time of enrolment, most officers receive instruction in their second official language in the period between basic officer training and initial classification training.

Employment and Advancement

Commissioned officers are employed by the Canadian Forces. Competition for officer training positions is keen. Promotions are based on time in rank, performance and the availability of positions. After completing the required term of service, officers may transfer their skills to related civilian occupations.

Salary

While officers are in training, their entry plans determine how much they are paid. ROTP officers earn $1,200 a month while in university. After training, there are separate rates of pay for general officers and specialist officers. The following are **2005** sample pay ranges for general service officers.

- Second Lieutenant: **$38,000 to $40,000 a year**
- Lieutenant: **$41,000 to $45,000 a year**
- Captain: **$60,000 to $80,000 a year**

Medical, dental, legal and pilot officers have higher pay scales than general service officers.

Benefits include environmental allowances which depend on postings, annual holidays, clothing upkeep allowance, pension plan, free medical and dental coverage, and education allowance.

Canadian Forces Personnel - Non Commissioned

Produced JANUARY 2005

Non-commissioned members are skilled trades personnel who provide operational and support services in the Canadian Forces.

NOC Number(s): 6464
Minimum Education: At least Grade 10
Employment Outlook: Employment turnover (occupational growth information is not available)
Interests: **M O s**

Duties

Many of the occupations considered trades in the Canadian Forces are similar to civilian trades; some are unique to the military. The Canadian Forces has many entry-level trades including:

- Aerospace Control Operator
- Aerospace Telecommunication and Information Systems Technician
- Aircraft Structures Technician
- Armoured Soldier
- Artillery Soldier (Field or Air Defence)
- Aviation Systems Technician
- Avionics Systems Technician
- Biomedical Electronics Technologist
- Boatswain
- Combat Engineer
- Communicator Research Operator
- Construction Technician
- Cook
- Dental Technician
- Electrical Distribution Technician
- Electrical Generating Systems Technician
- Fire Control Systems Technician
- Fire Fighter
- Hull Technician
- Imagery Technician
- Infantry Soldier
- Land Communication and Information Systems Technician
- Line Technician
- Marine Electrician
- Marine Engineering Mechanic
- Materials Technician
- Medical Laboratory Technologist
- Medical Radiation Technologist
- Medical Technician
- Meteorological Technician
- Military Police
- Mobile Support Equipment Operator
- Musician
- Naval Combat Information Operator
- Naval Communicator
- Naval Electric Sensor Operator

- Naval Electronics Technician (Acoustic, Communications or Tactical)
- Naval Weapons Technician
- Plumbing and Heating Technician
- Postal Clerk
- Refrigeration and Mechanical Systems Technician
- Resource Management Support Clerk
- Signal Operator
- Steward
- Supply Technician
- Tactical Acoustic Sensor Operator
- Traffic Technician
- Vehicle Technician
- Water, Fuel and Environmental Technician
- Weapons Technician (Land).

Working Conditions

Military personnel must wear uniforms when on duty and conform with Canadian Forces rules and regulations. The working environment and hours of work for non-commissioned personnel vary from one trade to another.

All military personnel are subject to transfer. Some assignments involve exposure to dangerous situations.

Personal Characteristics

Non-commissioned members of the Canadian Forces need the following characteristics:

- reliable and dependable
- loyal
- willing to conform to rules
- in good physical condition
- ambitious
- self-disciplined
- able to work well as part of a team.

Educational Requirements

Applicants for non-commissioned Canadian Forces personnel positions must:

- be Canadian citizens
- be at least 16 years of age for Reserve or 17 for full-time Regular Force
- have at least Grade 10 (33 Alberta high school credits) or equivalent education
- have no outstanding obligations to the legal system
- meet medical and physical requirements
- be willing to relocate as required.

The selection process is competitive and, as a general rule, those who have more education or related training have an advantage. High school graduates are more likely to succeed in the Canadian Forces.

The selection process includes a personal interview, aptitude and fitness testing, and a medical examination. Applicants must provide documentation such as school transcripts, social insurance number, birth certificate, two letters of reference and a completed Canadian Forces application form.

Those selected for enrolment are offered positions as they become available. Recruits are allowed a reasonable time to settle their personal affairs or to complete a school year before being sent for basic training in at the **Canadian Forces Leadership and Recruitment School** in St. Jean, Quebec.

The emphasis in basic training is on teamwork, drill, physical fitness and classroom instruction about the Canadian Forces. After successful completion of basic training, recruits are assigned to other bases in Canada to learn their trade and, depending on their trade, to specialized occupational training.

Enrolment in the Canadian Forces requires recruits to commit themselves to a three year initial contract. While there are provisions for remuster (changing trades), it is only allowed in exceptional circumstances. Therefore, applicants should take great care in choosing a trade and, if there are no current vacancies, should consider re-applying at a later date rather

than joining the Forces in trades that do not really interest them.

After leaving the Canadian Forces, those in trades similar to those governed by the Alberta Apprenticeship and Industry Training Act may apply for a journeyman certificate. Each application is assessed individually to determine if certification requirements have been met. Applicants may be required to take journeyman or progressive examinations. For more information, see the Apprenticeship and Industry Training website.

Employment and Advancement

After training, personnel are posted to a Canadian Forces base, unit or ship.

People in the military trades start as privates. Promotions are by competition and are awarded according to skill, time in a rank and job performance. Privates may advance in rank to corporal, master corporal, sergeant, warrant officer, master warrant officer and chief warrant officer. Promotion to the rank of corporal is achieved by attaining specific levels of training, normally after a minimum of four years of service. Some entry plans offer opportunities for advancement to the rank of corporal after a shorter time period. Retirement is compulsory at age 60.

Most large cities have at least one Canadian Forces Reserve unit. The Reserves offer part-time military training in a variety of trades during the academic year and full-time employment during the summer months. Some opportunities exist for trained Reserve personnel to be employed on a full-time basis for a fixed period of time.

Salary

Privates earn from **$27,000 to $39,000 per year.** Annual salaries for corporals range from **$44,000 to $50,000 (2005 figures).**

People in the military trades are entitled to four weeks of annual vacation with pay (five weeks after five years of service), free medical and dental care, a free dental plan for dependents and a pension plan.

Cardiology Technologist

Produced NOVEMBER 2004

Cardiology technologists perform cardiology tests to provide information needed in the diagnosis and treatment of heart disease.

NOC Number(s): 3217
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Cardiology technologists work with other health care professionals involved in diagnostic testing, monitoring and heart function evaluation. They may use a variety of electronic monitoring equipment for:

- electrocardiography
- multi-stage stress testing
- holter monitor analysis
- arrhythmia monitor analysis
- tilt table testing
- pacemaker clinics
- blood pressure analysis.

In general, cardiology technologists:

- prepare patients for testing by explaining procedures
- obtain medical history information
- ensure patient comfort and safety during procedures
- implement resuscitation measures when necessary
- provide results of diagnostic procedures for physician interpretation
- immediately notify physicians and nursing staff when they recognize life-threatening arrhythmias (heartbeats)
- maintain equipment and trouble-shoot technical problems
- assist in research projects.

Cardiology technologists must keep up to date with changing technologies.

Working Conditions

Cardiology technologists work rotating shifts in health care environments. Their work is physically demanding: they are on their feet most of the time and may be expected to help lift and move patients from wheelchairs to beds.

Cardiology technologists must follow standard infection control procedures.

Personal Characteristics

Cardiology technologists work with people who are not feeling well and may have fears about testing. Technologists must be:

- mature and self-confident
- able to communicate understanding and reassurance to patients
- able to pay close attention to details
- able to think and act quickly and appropriately in emergency situations
- able to work with little direct supervision
- organized.

They should enjoy working with computers and electronic equipment at tasks requiring precision, having clear guidelines and established methods for their work, and compiling and recording test results.

Educational Requirements

In Canada, the following institutions offer training programs related to cardiology technology:

- **British Columbia Institute of Technology (BCIT)** in Burnaby, B.C. offers a distance education program.
- **CDI College** in Hamilton, Ottawa and Toronto, Ontario.
- **Mowhawk College of Applied Art and Technology** in Hamilton, Ontario.

In general, the entrance requirement is a high school diploma with related science courses, or equivalent. For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Alberta employers generally require applicants for cardiology technology positions to be registered members of the Canadian Society of Cardiology Technologists (CSCT) and the Alberta Society of Cardiology Technologists (ASCT).

Employment and Advancement

(section revised JANUARY 2006)

Most cardiology technologists work in hospital cardiology departments. Some are employed in private laboratories and clinics. In smaller rural hospitals, they may have other duties (e.g. medical laboratory services) which require additional training (see the Medical Laboratory Technologist occupational profile).

Without additional education, advancement opportunities in this occupation are limited.

In Alberta, most people employed as cardiology technologists work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 100 Albertans are employed in the Cardiology Technologists occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Cardiology Technologists occupational group working part-time or full-time earned from **$25,600 to $55,900 a year.** The average salary was **$30,300 a year.**

According to the Alberta Society of Cardiology Technologists, 2004 salaries in this occupation ranged up to $62,700 in Alberta.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Career and Technology Studies Teacher

Produced JANUARY 2006

Career and technology studies (CTS) teachers help junior and senior high school students make effective career decisions, develop skills for personal living, and enter the workforce or further education.

NOC Number(s): 4141
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I D**

Duties

Alberta's Career and Technology Studies Program is made up of twenty-two topic areas (strands) from which schools select content and organize courses. There is one standard Career and Technologies Studies program for the province but each school selects content based on student and community needs, and available resources. No one school is likely to offer all CTS courses or even content drawn from all twenty-two strands.

In general, CTS teachers:

- teach courses drawn from one or more strands
- develop content and various methods of teaching content
- keep up to date in their fields by attending courses, workshops, conferences and seminars.

The duties of CTS teachers are similar to those of other teachers. For more information, see the Secondary School Teacher occupational profile.

Working Conditions

CTS teachers work in school laboratories and workshops. Some work environments simulate office, workshop, salon, clinic, home or other settings found in business, industry and government. Many hours are spent outside class time working with individual students, preparing lessons and marking assignments.

Teaching can be a demanding job requiring a great deal of physical, mental and emotional energy.

Personal Characteristics

Career and technology studies teachers need the following characteristics:

- a genuine liking for and interest in young people
- strong leadership and organizational skills
- a good sense of humour
- patience, compassion, tolerance and understanding
- good mental, emotional and physical health and stamina
- the ability to communicate effectively with students, colleagues, employers, administrators, parents and the community at large.

They should enjoy finding different ways to solve problems and present information, and organizing and co-ordinating the work of others.

Educational Requirements

Career and technology studies teachers need a combination of knowledge and skills in education and their subject area.

In Alberta, Career and Technology Studies teacher preparation programs are offered by the following institutions:

- The **University of Alberta** in Edmonton offers Bachelor of Education (B.Ed.) degree and after-degree programs with a career and technology studies pattern. The admission requirement for the Faculty of Education is one year of pre-professional studies with 24 units of transferable course weight to the student's program major.

Admission to pre-professional studies programs generally requires a competitive average in English Language Arts 30-1 (or English 30), three 30 level humanities or science subjects and one other approved 30 level subject. Journeymen who have four years of work experience after completing apprenticeship and those who have a combination of eight years training and work experience in an approved non-apprenticable field may be awarded advanced standing.

- The **University of Lethbridge** offers five year combined degree programs and an after-degree B.Ed. program with a specialization in career and technologies studies. Students are admitted to the Faculty of Education after two or three years of university study. Admission to other programs generally requires a 65 per cent average in English Language Arts 30-1 (or English 30) and three other 30 level courses, plus a fifth Grade 12 subject.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Teaching some CTS curriculum strands requires an appropriate Alberta Journeyman Certificate.

Employment and Advancement

CTS teachers are employed by:

- junior and senior high schools
- colleges and vocational centres with integrated or technical occupational programs.

Experienced CTS teachers may advance to administrative positions or specialist positions in large schools, school districts, departments of education, colleges or universities.

CTS teachers are part of the much larger National Occupational Classification 4141: Secondary School Teachers. In Alberta, people employed in this classification work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,750 Albertans are employed in the Secondary School Teachers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 210 to 390 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since CTS teachers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for CTS teachers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

The Alberta Teachers' Association estimates that about 400 teaching positions will become vacant each year due to retirement.

Salary

Since salaries and benefits are determined by collective agreements between school boards and their teachers, salaries vary from one board to another. However, all teachers are paid according to a grid system based on number of years of university training and number of years of teaching experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Secondary School Teachers occupational group working part-time or full-time earned from **$23,400 to $100,600 a year.** The average salary was **$64,700 a year.**

All teachers employed in Alberta's publicly supported schools are members of the Alberta Teachers' Association (ATA) and are automatically included under the Alberta Teachers Pension Plans Act. Collective agreements negotiated by the ATA on behalf of Alberta's teachers provide them with a range of benefits including:

- life and disability insurance
- extended health care coverage
- vision and dental insurance
- professional improvement leave opportunities.

Holidays and pensions are specified by provincial legislation. However, teachers often use the summer break period of July and August, Christmas or spring break holidays for professional development or for fulfilling additional professional responsibilities.

Career Development Professional

Produced NOVEMBER 2005

Career development professionals advise, coach, provide information and support people who are planning, seeking and managing their life/work direction.

NOC Number(s): 4213
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M I**

Duties

Career development professionals help clients of all ages:

- make plans and decisions related to choosing a career direction
- select education and training programs
- balance work and other life roles
- navigate career transitions and stages
- enhance career satisfaction
- find employment or self-employment opportunities, write resumes, develop portfolios and prepare for interviews.

Working with clients individually or in groups, career development professionals may:

- help people develop a better appreciation of their unique characteristics and how those characteristics relate to career choices
- use various assessment tools to help clients identify their interests, values, beliefs, lifestyle preferences, aptitudes and abilities, and relate them to the world of work
- help clients identify educational requirements and develop training plans
- facilitate career management and career decision-making workshops
- work with clients who have disabilities, language and cultural differences, or other special needs that affect their employment prospects
- help clients deal with barriers to achieving their career plans
- help employed clients plan career laddering within organizations, cope successfully with job dissatisfaction, or make occupational or job changes
- provide current labour market information to help clients make realistic occupational or employment decisions
- market clients to potential employers and help clients find job or work experience placements
- assist clients with implementing effective employment search strategies, writing resumes, and developing career portfolios and interview skills
- plan and implement career and employment-related programs
- refer clients to appropriate services to address their particular needs
- work co-operatively with community groups and agencies, businesses and other organizations involved in providing career planning resources
- use computers to write reports and proposals, and research information on the Internet
- perform related administrative tasks such as keeping records.

For information about school guidance counsellors and counsellors in post-secondary institutions, see the Educational Counsellor occupational profile.

Working Conditions

Career development professionals may work in a variety of settings but usually work in offices where they can conduct private interviews with clients and in classrooms or boardrooms where they conduct group sessions. Depending on the organization, their hours of work may include some evening and weekend work.

Personal Characteristics

Career development professionals need the following characteristics:

- a genuine interest in and respect for people from all walks of life
- patience, understanding and the ability to listen non-judgementally
- excellent oral and written communication skills and presentation skills
- objectivity and tact
- the ability to motivate and inspire clients
- the ability to facilitate communication in groups of eight to 20 people
- good organizational and planning skills
- the ability to work effectively with other professionals and community agencies.

They should enjoy consulting with people, compiling information and working with clients to develop innovative solutions to problems.

Educational Requirements

Most career development professionals have post-secondary education in a related discipline such as psychology, education, social work or human resources development. Increasingly, employers are looking for applicants who have a certificate, diploma or degree in career development, or an equivalent combination of education and experience.

Post-secondary institutions throughout Alberta offer psychology, education, social work and/or human resources development programs. For more information, see the Psychologist, Educational Counsellor, Social Worker and Human Resources Professional occupational profiles.

In Alberta, the following institutions offer post-secondary programs in career development:

- **Athabasca University** offers a one year (30 credit) University Certificate in Career Development program by distance education. Applicants must be residents of Canada who are at least 18 years of age. This program is intended for people who have work experience related to career development.
- The **Campus Alberta Graduate Program in Counselling**, a tri-university partnership of Athabasca University, the University of Calgary and the University of Lethbridge, offers a Master of Counselling degree program with a specialization in career counselling. The entrance requirement is a minimum grade point average (GPA) of 3.00/4 in the last ten full-course equivalents of a four year bachelor's degree program that includes specified courses in psychology or educational psychology and a counselling skills course, or equivalent.
- **Concordia University College of Alberta** in Edmonton offers university credit and non-university credit courses in career development. Students may enrol in three year or four year Bachelor of Arts (BA) and Bachelor of Science (B.Sc.) degree programs with a minor (18 to 24 credits) in career development. The entrance requirement for the degree programs is an average of at least 60 per cent in five appropriate Grade 12 subjects. Non-university credit courses are offered in the Certificate (19 credits) or Diploma (33 credits) in Career Development programs through the Continuing Education Division. The entrance requirement for the Certificate and Diploma programs is an appropriate degree or other relevant post-secondary education, or equivalent experience. Courses may be taken on campus or through self-study.
- The **University of Calgary** offers a part-time (300 hour) Career Development certificate program through Continuing Education. Applicants must have completed some post-secondary course work and have three to five years of relevant work experience, or equivalent.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

On an ongoing basis, career development professionals must keep up to date with changes in educational, occupational and labour market information.

Other Requirements

Certification is voluntary. The **Career Development Association of Alberta** grants the designation Certified Career Development Professional (CCDP) to applicants who meet educational, experience and ethical requirements.

Employment and Advancement

(section revised JANUARY 2006)

Career development professionals are employed by:

- provincial and federal government departments
- educational institutions (public, separate and post-secondary schools)
- the human resources departments of large organizations
- private agencies
- not-for-profit organizations.

An increasing number of career development professionals work on a contract basis or are self-employed.

Advancement opportunities depend on the nature and size of the employing organization, and the career development professional's qualifications.

Career development professionals are part of the larger National Occupational Classification 4213: Employment Counsellors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Health Care and Social Assistance**
- **Management, Administrative and Other Support Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,250 Albertans are employed in the Employment Counsellors occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since career development professionals form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for career development professionals.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for career development professionals vary depending on the organization and the individual's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Employment Counsellors occupational group working part-time or full-time earned from **$16,500 to $132,000 a year**. The average salary was **$41,900 a year**.

Alberta Human Resources and Employment

Carpenter

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Carpenters construct, erect and repair buildings and other structures made of wood, wood substitutes, steel and other materials.

NOC Number(s): 7271
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M I

Duties

Carpenters' duties vary from one position to another.

- In **residential jobs**, they crib the basement, build a framework of walls, roof, exterior and interior finishes, and install doors, windows, flooring, cabinets, stairs, handrails, panelling, moulding and ceiling tiles.
- In **commercial or industrial jobs**, they build concrete forms, scaffolding, bridges, trestles, tunnels, shelters, towers and other structures.
- In **maintenance jobs**, they repair and remodel existing structures of all kinds.

In any type of position, carpentry tasks generally involve:

- reading blueprints or getting instructions from a supervisor
- doing the layout (selecting materials, planning sequences and methods of work, measuring and marking materials to avoid costly mistakes or omissions)
- cutting and shaping materials and joining them with nails, screws, bolts or glue
- checking completed units to be sure they are level, square, plumb and the right size, shape and location.

Carpenters must work accurately and economically and follow national and local building codes. Some carpenters specialize in a particular type of work such as framing, bench or finishing work.

Working Conditions

Working conditions vary from one job to another. On jobs where the work is primarily indoors, carpenters are permanently employed and work a regular 40-hour week. On other jobs where the work is primarily outdoors, carpenters are subject to seasonal unemployment and routinely work overtime in peak periods. There is some risk of injury due to slips, falls and falling objects, and when working with sharp hand and power tools.

Carpenters may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Carpenters need the following characteristics:

- the ability to stand, crouch and kneel for long periods of time
- manual dexterity
- good sense of balance when working on scaffolds
- the ability to solve math problems quickly and accurately
- the ability to get along well with others on a work team.

They should enjoy creating things with their hands.

Educational Requirements

To work in Alberta, carpenters must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,360 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Apprentices are required to provide their own tools.

Applicants who have related training or work experience may be eligible for credit or certification.

Carpenter apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Keyano College in Fort McMurray
- Lakeland College in Vermilion
- Lethbridge Community College
- Medicine Hat College
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Fairview
- Northern Lakes College in Grouard
- Portage College in Lac La Biche
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Competency-Based Apprenticeship Training (CBAT) is also offered by Lethbridge Community College, Red Deer College and SAIT.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Millwork and Carpentry certificate program. The entrance requirement is Grade 10 with English and math.
- **Red Deer College** offers a one year Carpentry and Construction certificate program. The entrance requirement is Pure Math 10 or Applied Math 20 or Math 23 and English 10 or 23 or equivalent.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information on specfic programs, please check post-secondary calendars or websites.

Employment and Advancement

Most carpenters are employed by construction contractors, are self-employed or do construction or maintenance work for government agencies, utility companies or manufacturing firms.

Carpenters may advance to foreman, supervisor, subcontractor, construction superintendent or contractor positions. Alberta certified journeyman carpenters who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, most people employed as carpenters work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta

- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 18,750 Albertans are employed in the Carpenter occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 410 to 600 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice carpenters earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 70 per cent in the second, 80 per cent in the third and 90 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$17 to $32 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Carpenters occupational group working part-time or full-time earned from **$19,000 to $84,300 a year.** The average salary was **$72,600 a year.**

Carpet and Upholstery Cleaner

Produced JUNE 2003

Carpet and upholstery cleaners operate cleaning machines to clean carpets, rugs and upholstered furniture at customers' premises or in cleaning plants.

NOC Number(s): 6662.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **O M d**

Duties

Duties and responsibilities vary from one employer to another but, in general, carpet and upholstery cleaners:

- load supplies and equipment into trucks or vans
- drive to customers' homes and businesses
- discuss job requirements with customers (e.g. areas to be cleaned, stains requiring special removal techniques)
- move furniture to clear carpeted areas prior to cleaning and replace it afterward, if requested
- use appropriate chemical solutions to clean wall-to-wall carpets and upholstered furniture in homes, automobiles and recreational vehicles
- use the appropriate chemical agents and hand brushes to remove stains such as tar, gum or rust
- respond to customers' questions and concerns
- prepare invoices and accept payments.

Working Conditions

Most carpet and upholstery cleaners work from fairly early in the morning until whenever they have completed the number of jobs they have accepted for the day. Some evening and weekend work may be required.

Carpet and upholstery cleaners work in customers' homes and in cleaning plants. They may be required to travel within a specified service range, and move furniture or equipment weighing up to 25 kilograms. Safety precautions are required to avoid slipping on wet carpet, developing repetitive strain injuries and reacting adversely to chemicals.

Personal Characteristics

Carpet and upholstery cleaners need the following characteristics:

- the stamina and endurance required to be on their feet performing repetitive tasks for hours at a time
- manual dexterity
- the mechanical aptitude required for dealing with equipment failures
- the ability to establish rapport and communicate with all kinds of people
- the ability to work independently or as part of a team.

They should enjoy operating cleaning machines, having clear guidelines and organized methods for their work and determining which cleaning agents should be used to remove stains.

Educational Requirements

Carpet and upholstery cleaners are usually **trained on the job**. There are no standard education or certification requirements other than a valid driver's license. However, employers may prefer to hire job applicants who have a high school diploma or related training (e.g. safety training, fabric cleaning). Some employers require job applicants to:

- provide a crminal record check from the police

- agree to other security checks (e.g. Child Welfare Records check, Protection for Persons in Care Act screening requirements)
- take an English literacy screening test.

Some post-secondary institutions and school board Continuing Education departments offer related courses on an as needed basis. These courses are advertised in local newspapers.

The **Institute of Inspection, Cleaning and Restoration Certification** offers certification for carpet and upholstery cleaners who have taken Institute-approved training courses.

Employment and Advancement

(section revised JANUARY 2006)

Carpet and upholstery cleaners may be self-employed or employees of carpet cleaning companies or large organizations such as department store chains. Prospective carpet cleaners are strongly advised to investigate the reputations of potential employers before applying for jobs. Business practices, approaches to training and pay structures vary considerably from one employer to another. Employers may supply their workers with van-mounted cleaning units, or require them to use portable machines and their own vehicles.

A few experienced carpet and upholstery cleaners advance to supervisory positions or establish their own businesses.

Carpet and upholstery cleaners are part of the larger National Occupational Classification 6662: Specialized Cleaners. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Management, Administrative and Other Support Services**
- **Retail Trade**
- **Transportation and Warehousing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,450 Albertans are employed in the Specialized Cleaners occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since carpet and upholstery cleaners form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for carpet and upholstery cleaners.)

There is a relatively high employment turnover rate in this occupation so demand for new workers is fairly steady. However, there are often many applicants for vacant positions.

Salary

(section revised OCTOBER 2005)

Carpet and upholstery cleaners' earnings vary greatly. Some employers pay hourly wages plus commissions based on the volume of work performed. Other employers pay straight commission based on product sales. In these companies, carpet and upholstery cleaners' earnings vary considerably from one worker to another and from one month to another, depending on the number of jobs they are offered and the number of additional products they sell.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Specialized Cleaners occupational group working part-time or full-time earned from **$12,500 to $152,100 a year.** The average salary was **$28,700 a year.**

Cartoonist

Produced MAY 2005

Cartoonists are artists who create cartoon-style illustrations for newspapers, advertisements, magazines, films, television, books, newsletters and greeting cards.

NOC Number(s): 5241.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M S

Duties

Cartoonists are probably best known for creating comic strips and children's animated television shows. However, cartoons appear in and on all types of media including film, television, advertising, promotional material, newspapers, magazines, packaging and clothing. They may tell a story, provide social commentary or reflect public opinion.

In general, cartoonists:

- get their inspiration from many places and often keep a sketch book or diary of ideas for future use
- make pencil sketches of their ideas or use computer software to draw cartoons
- use a variety of mediums to shade and fill in their outlines (e.g. ink, water colours, markers, transparent washes, computer programs).

They may discuss their ideas and initial drawings with an editor or publisher before finalizing them.

Many cartoonists specialize in a particular type of cartoon:

- **Comic strip artists** draw a series of pictures that tell a short story. Characters in the strips may or may not speak. Often the original drawings are quite large and reduced for publication. Increasingly, popular comic strips are appearing as television specials, cartoon shows and on commercial products such as T-shirts and toys.
- **Editorial cartoonists** create single cartoons for newspapers or magazines. These cartoons are caricatures or comic figures of well-known people or events, often political satires commenting on issues of the day.
- Some cartoonists are **storyboard artists** at advertising agencies or art studios who create animated commercials and animated films. They often prepare drawings that other artists (e.g. illustrators, animators) make into finished ads or films. For more information, see the Animator and Illustrator occupational profiles.

Working Conditions

Cartoonists work at drawing boards and may sit for long periods of time. They must deal with the constant pressure of deadlines.

Personal Characteristics

Cartoonists need the following characteristics:

- creativity, imagination and artistic talent
- the ability to take criticism well
- self-motivation
- a sense of curiosity about politics, sports or life in general
- the ability to meet deadlines.

Editorial cartoonists also need a satirical sense of humour and keen, analytical observation of news events.

All cartoonists should enjoy synthesizing information, finding innovative approaches, taking a methodical approach to tasks requiring precision (e.g. preparing specifications, estimating costs) and consulting with clients.

Educational Requirements

Many successful cartoonists are self-taught but formal art training and computer skills are helpful. A strong writing background is also an asset, particularly for strip cartoons. Editorial cartoonists need some knowledge of political history.

Using cartoons in advertising for products, events, projects, public education or services is very popular. To be able to suggest cartoon ideas that will help sell a client's product or service, cartoonists must keep up to date with publicity and marketing trends.

There are no specialized art programs for cartoonists in Alberta but post-secondary institutions throughout the province offer fine art and visual communications programs that can provide a good foundation for cartooning. Entrance requirements for these programs generally include a high school diploma with English Language Arts 30-1 or equivalent. Admission to some programs requires an average of at least 60 per cent in five appropriate 30 level subjects.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

After completing some basic art training, many cartoonists start by apprenticing with a well-known cartoonist at an advertising agency, design studio or newspaper. Practice is essential to develop a portfolio of work to show potential employers. Cartoonists are advised to ask for constructive criticism from people in the business.

Developing an individual style that is recognizable helps to build a cartoonist's reputation.

Employment and Advancement

(section revised JANUARY 2006)

Most other cartoonists work on a freelance basis. They may work for:

- advertising agencies
- newspapers
- magazines
- book publishing companies
- video and film production studios
- greeting card companies
- graphic design studios
- government communications or public relations departments.

Some editorial cartoonists are employed full-time by major newspapers and magazines. Their work is often transmitted electronically to several newspapers at one time.

Cartooning is a very competitive field that is difficult to enter. Freelance cartoonists must spend a lot of time marketing their drawings and ideas to potential employers. They often need to develop a working relationship with ten or more clients on a regular basis to make a modest income. Some cartoonists also work as illustrators or graphic designers (for more information, see the Illustrator and Graphic Designer profiles).

Cartoonists are part of the larger National Occupational Classification 5241: Graphic Designers and Illustrators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 6,950 Albertans are employed in the Graphic Designers and Illustrators occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 180 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since cartoonists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for cartoonists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Cartoonists may earn very little money or a lot if they become well known. A few very successful cartoonists syndicate their work.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Graphic Designers and Illustrators occupational group working part-time or full-time earned from **$15,800 to $92,600 a year.** The average salary was **$37,200 a year.**

Cashier

Produced OCTOBER 2003

Cashiers total bills, accept payments, make change, provide information, fill out forms and provide receipts for goods and services in supermarkets, department stores, theatres, restaurants and other establishments.

NOC Number(s): 6611
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O s**

Duties

Most cashiers operate electronic cash registers and optical price scanners. At the beginning of each shift, they are given a specified amount of money in a drawer and, at the end of the shift, may be required to balance their cash against total cash receipts. Cashiers must be familiar with the store's prices, policies and procedures to:

- accept payments in cash or by cheque, credit card, traveller's cheque, point of sale or direct debit card
- process coupons, discounts and gift certificates
- provide refunds.

Cashiers or checkout clerks **in supermarkets and cafeterias:**

- greet customers
- enter the prices of all items or scan the products, and subtract the value of any coupons or special discounts
- provide information such as where to find products
- total bills and accept payment
- thank customers and offer carry-out service
- keep the checkout area clean and orderly
- ensure that they have adequate change and appropriate cash levels at all times
- use the paging system to request information or assistance as needed.

They may also:

- weigh produce and bulk food
- package or bag purchased merchandise
- return unwanted items to the shelves and stock shelves during slack periods, or stand on the line ready to serve the first available customer.

Cashiers **in retail stores** tabulate bills, accept payment and pack purchased goods in bags or boxes. Most employers in the retail industry prefer to hire people who also act as salespersons (for more information, see the Retail Salesperson occupational profile).

Cashiers **in restaurants** may also:

- accept reservations or take-out orders
- type menus
- sell candy and cigarettes
- seat guests.

Box office cashiers sell tickets for admission to places of entertainment such as theatres, stadiums and skating rinks. In general, they:

- provide information about events in person or via telephone, Internet or mail
- describe venue layouts and seating locations to help customers choose the best possible seats
- fill reservations for seats.

Theatre box office cashiers often do public relations work as well.

Cashiers who work in **government departments and other large organizations** such as utility companies receive payment for things such as utility bills, taxes and parking fines.

Working Conditions

Most cashiers stand in small booths or behind counters for long periods of time, sometimes near store entrances where they are subject to cold drafts in the winter. During busy periods, there may be considerable pressure to work rapidly while still maintaining accuracy and a pleasant manner. Depending on the work setting, cashiers may lift items weighing up to 10 kilograms.

Cashiers in supermarkets, cafeterias, theatres and retail stores often work evenings and weekends, and may work part-time to cover busy periods. Restaurant and hotel cashiers often work rotating shifts without set days off. Vacation time off may be restricted to times of the year that are not as busy.

Personal Characteristics

Cashiers work with the public and therefore must be courteous, personable, outgoing, patient, tactful and neat in appearance. They also must be able to:

- keep cool under pressure
- describe products and services clearly in person and/or on the telephone
- remember faces, products, price codes and sales promotions.

They should enjoy having clear instructions to follow, balancing total payments and sales at the end of a shift, packing goods and operating equipment, and having daily contact with the public.

Educational Requirements

The primary requirement for cashiers is the ability to provide good customer service and work with numbers accurately and quickly. Computer experience is an asset. Cashiers who work for businesses where currency is exchanged must know how to process foreign exchanges.

Cashiers may work with large sums of money and therefore must be bondable (acceptable to a bonding company as a responsible person). Cashiers are usually **trained on the job**. Some employers provide short training sessions before putting inexperienced cashiers on the selling floor.

Employment and Advancement

(section revised JANUARY 2006)

Cashiers are employed in:

- supermarkets and food stores
- drug stores
- department stores
- restaurants
- theatres
- business offices
- hotels and motels
- telephone utility companies.

There are opportunities to move into positions in other store departments or to advance to supervisory positions. In some establishments, cashiers may advance to assistant or branch manager positions.

In Alberta, most people employed as cashiers work in the following industries:

- **Retail Trade**
- **Accommodation and Food Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 37,000 Albertans are employed in the Cashiers occupational group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 630 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

In many retail establishments, the starting wage for cashiers is at or just above minimum wage. Job benefits may include merchandise discounts.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Cashiers group working part-time or full-time earned from **$9,700 to $46,000 a year.** The average salary was **$18,800 a year.**

© Government of Alberta, Human Resources and Employment

Casino Dealer

Produced SEPTEMBER 2004

Casino dealers run gaming tables for blackjack (twenty-one), baccarat, poker, craps, roulette and other games in gambling casinos.

NOC Number(s): 6443.2
Minimum Education: Less than high school
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M D

Duties

In general, casino dealers:

- conduct gambling games smoothly, legally and according to casino rules
- exchange money for casino chips
- make sure players have placed their bets before play begins
- announce winning numbers or colours
- compute payoffs and pay winning bets
- collect losing bets
- respond to questions about game rules and casino policies.

Their specific duties vary, depending on the type of game.

Blackjack dealers stand at a table and deal cards according to established game procedures. They may deal cards from one or more decks, or from a shoe (a box that holds one or more decks of cards and dispenses cards individually). After all the players at a blackjack table have decided how many cards they want, dealers compare their hands (cards) to each player's hand to determine who wins and who loses.

Baccarat dealers may work in teams of up to three people, depending on the size of the table and number of players. When they work in teams of three, one person deals cards and the other two payoff and collect bets.

Craps (dice game) dealers work in teams: a box person, a stick person and two dealers. The box person supervises the game, mediates disputes and controls casino chips. The stick person pushes dice to shooters (people who throw dice), retrieves thrown dice and calls the game. The dealers payoff, and move and collect bets, depending on the outcome of the throw.

Poker dealers shuffle and deal cards to players, take the house percentage from the pot and pay winners.

Roulette dealers sell casino chips, spin the roulette wheel, release the ball, and payoff and collect bets. During busy periods, two dealers may work one roulette table.

Working Conditions

There is a great deal of supervision in gaming. Everything is watched and videotaped by surveillance cameras to protect the casino and players from cheating, theft and mistakes.

Most dealers work in pits (groups of tables) and rotate positions to give each dealer a fifteen-minute break every hour. They must remain alert, cheerful and helpful at all times. Many dealers are on their feet all the time except during breaks.

Dealers work shifts. They often work late nights, weekends and holidays, and may work full-time or part-time. Depending on the casino, they may be required to wear specific types of clothing (e.g. tuxedo shirts and pants), casino uniforms or vests.

Although there may be a few non-smoking tables, casinos are generally smoky environments. They also are often crowded and noisy.

Personal Characteristics

Casino dealers need the following characteristics:

- good communication skills in English (or the language in which the casino operates)
- the manual dexterity required to handle cards smoothly
- the ability to count and add quickly and accurately
- the ability to concentrate for long periods of time
- the ability and desire to keep employee, customer and business information confidential
- good problem-solving skills
- good stress-management skills
- the interpersonal skills required to deal effectively with difficult players and those who become angry when they lose.

Craps dealers must be able to keep up an enthusiastic patter during craps games.

All casino dealers should enjoy meeting and serving all kinds of people, and be willing to work under close supervision.

Educational Requirements

Casino dealers must be of legal gambling age and have no criminal record. There are no standard minimum education requirements for casino dealers but employers generally prefer to hire applicants who have a high school diploma. Knowledge of the community and local tourist attractions is an asset.

Dealers must have a complete working knowledge of games, casino rules and security procedures. Most casinos train dealers though in-house training programs. Newly hired dealers are usually given 40 to 60 hours of training over two to six weeks. After they have gained experienced with basic games, dealers may be trained for more advanced games. The number of hours required to train for advanced games varies depending on the game.

Before they are allowed to work in a casino in Alberta, dealers must be registered with the Alberta Gaming and Liquor Commission. Applicants must submit a completed application form, current colour photograph, proof of age and citizenship and a criminal record check.

Other Requirements

In Alberta, casino dealers must renew their registration with the Alberta Gaming and Liquor Commission every two years.

Employment and Advancement

Casino dealers are employed in gambling establishments located in urban centres or on First Nations reserves.

Advancement generally takes the form of learning how to conduct more advanced games or moving into supervisory positions. For example, dealers may start dealing blackjack and later learn other table games such as craps or roulette. Then they may advance to floor supervisor positions, overseeing table games and dealers in a pit. Floor supervisors may become pit managers who ensure that games are run smoothly, schedule dealers' breaks, watch for cheating, mediate disputes, open/close table games and do the associated paper work. Further advancement to management positions may require related post-secondary education.

This occupation is expected to grow as the gambling industry continues to expand in Alberta.

Salary

(section revised OCTOBER 2005)

Hourly wages for casino dealers generally start at or just above minimum wage, and increase with experience and as dealers learn how to conduct more games. Tip money is shared equally among dealers working a shift. On average, dealers receive two to five dollars per hour in tips.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Gambling Casino Workers occupational group working part-time or full-time earned from **$13,100 to $30,300 a year.** The average salary was **$16,100 a year.**

© Government of Alberta, Human Resources and Employment

Casting Director

Produced MAY 2003

Casting directors are hired on contract by film, video, television and advertising companies to find suitable actors to audition for particular parts or characters. Directors or producers have the final say in who is hired for each part.

NOC Number(s): 5226.7
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M O**

Duties

Casting directors work closely with performers and film production people. In general, casting directors:

- routinely review performers' promotional materials such as photos, resumes of production credits and industry training, demo reels and voice-over demo CDs
- review scripts, prepare a succinct breakdown of the nature of each role that needs to be cast, describe characteristics and special requirements for each role, and distribute the information to appropriate talent agencies and self-represented performers
- pre-screen candidates to select the most suitable performers for the director and the producer to see
- facilitate the scheduling of callbacks or secondary auditions for those performers the director and/or producer wish to work with further on a particular role
- research organizations, associations or individuals to cast a specific skill or unique talent such as a fire-breathing unicyclist or an Olympic calibre athlete
- negotiate contracts and scheduling between performers or their agents and the production company.

Another area of casting is finding background performers or extras: stand-ins for lead performers, photo-doubles, performers for non-speaking parts and crowd scenes. Scheduling changes for large and small group scenes are not uncommon.

Working Conditions

Travel is often part of auditioning new talent and meeting television and film production people.

Personal Characteristics

Casting directors need the following characteristics:

- the ability to work long hours in a fast-paced environment
- excellent oral and written communication skills
- good interpersonal skills.

They should enjoy compiling information from scripts and signalling cues, taking charge of situations, and negotiating with people.

Educational Requirements

There is **no particular educational route** to enter this field. Casting directors come from diverse backgrounds:

- theatre and film occupations
- business occupations
- public relations.

Interested individuals who have suitable backgrounds may be able to arrange informal apprenticeships with established casting directors. Post-secondary education in the performance arts and contract negotiation skills are definite assets.

For ACTRA jobs, casting directors must be be familiar with the **Alliance of Cinema Television and Radio Artists** Independent Production Agreement for film and television productions and the ACTRA Commercial Agreement for television and radio commercials. These agreements outline standards, including wage minimums and working conditions for Canadian performers of all ages, that must be followed by members of the Canadian Film and Television Producers Association, the Institute of Communications and Advertising, and the Association of Canadian Advertisers.

Other Requirements

Casting directors may belong to professional associations such as:

- Alberta Motion Picture Industry Association
- Casting Directors Society of Canada
- Women in Film and Television - Alberta
- Women in Film and Television - International.

Employment and Advancement

Casting directors are hired on contract for specific projects by:

- film and video production companies
- advertising agencies
- television and radio stations and networks.

Fewer than ten casting directors are employed in Alberta.

Salary

Casting directors negotiate each contract separately. They may negotiate a flat rate or per hourly, daily or weekly wage rate.

Caterer

Produced FEBRUARY 2004

Caterers plan, organize and direct the preparation and service of food and beverages for banquets and other social functions.

NOC Number(s): 0631
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M S**

Duties

Caterers may specialize in particular types of functions or food (eg. small business meetings, vegetarian food) or they may cater to a variety of functions and food preferences.

Depending on the size of the operation, caterers may perform all or only some of the following duties:

- discuss requirements with customers and take detailed notes about food and service requirements
- hire chefs, cooks or serving staff if necessary
- develop menus that accommodate any special dietary requirements
- prepare budgets
- purchase supplies
- prepare food or supervise food preparation
- ensure safe food handling practices during preparation, transport and service
- maintain proper liquor controls
- follow up with clients after functions and deal with customer complaints.

They may also:

- co-ordinate arrangements such as room or hall rentals
- set up prior to functions and clean up afterward
- develop work schedules
- supervise food and beverage service during the function.

Self-employed caterers may market their services and manage accounting and other business functions themselves, or hire sales and business managers.

Working Conditions

Self-employed caterers often work long hours including evenings, weekends and holidays until their businesses are well established. They frequently lift and carry items weighing up to 25 kilograms.

Personal Characteristics

Caterers need the following characteristics:

- good communication, supervisory, negotiation and problem-solving skills
- excellent organizational skills
- the ability to work alone or as part of a team
- the ability to remain calm while working in close quarters with others during busy periods
- flexibility and creativity.

They should enjoy:

- co-ordinating information and the activities of others
- setting work schedules, monitoring staff and controlling inventory
- negotiating arrangements with suppliers and clients.

Educational Requirements

(section revised OCTOBER 2005)

Caterers need training and experience related to food preparation or food service. For example, they must be knowledgeable about food safety, liquor codes and fire regulations. Self-employed caterers also need business management knowledge and skills. For information about related post-secondary programs, see the Banquet Manager, Chef and Cook occupational profiles.

Alberta Tourism Education Council (ATEC) has developed occupational standards for Catering Functions Supervisors and Catering Functions Managers. ATEC standards define the knowledge and skills necessary to be a competent professional.

Employment and Advancement

(section revised JANUARY 2006)

Caterers may be self-employed or employed by large catering firms, hotels or convention facilities. Advancement in this occupation generally takes the form of moving to more responsible positions or building a bigger business.

Caterers are part of the larger National Occupational Classification 0631: Restaurant and Food Service Managers. In Alberta, most people employed in this classification work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 13,800 Albertans are employed in the Restaurant and Food Service Managers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 200 to 350 **new** positions will be created each year **in addition** to job openings created by employment turnover.(**Note**: Since caterers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for caterers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Self-employed caterers should expect to make very little in their first year of operation. However, successful catering businesses can be very profitable.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Restaurant and Food Service Managers occupational group working part-time or full-time earned from **$13,000 to $179,900 a year.** The average salary was **$30,900 a year.**

© Government of Alberta, Human Resources and Employment

Chauffeur

Produced OCTOBER 2003

Chauffeurs drive limousines and large sedans to transport passengers, ranging from corporate executives to children, from place to place.

NOC Number(s): 7413.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: O M S

Duties

Chauffeurs may work exclusively for specific organizations or individuals, or work for companies that provide limousine services for special occasions such as business meetings, weddings, graduations, concerts and formal parties.

The primary responsibility of all chauffeurs is to operate passenger vehicles safely and efficiently. However, they also:

- pick-up or meet passengers in response to dispatched calls or pre-arranged bookings
- help passengers board and leave limousines
- provide information about the local area
- collect payments from customers
- keep their limousines clean inside and out
- perform routine maintenance checks on their vehicles (e.g. check tires, fluid levels).

Working Conditions

Chauffeurs may work on-call and only on a part-time basis, or they may drive full-time exclusively for one employer. They spend most of their work time either driving or waiting for passengers. Chauffeurs often work nights and on weekends, and sometimes work shifts. They are usually required to wear suits or uniforms.

Lifting luggage and parcels weighing up to 25 kilograms, and occasionally in excess of 25 kilograms, may be required.

Personal Characteristics

Chauffeurs need the following characteristics:

- good communication skills
- the ability to remain diplomatic and courteous, even when dealing with difficult passengers
- a desire to maintain a neat personal appearance and keep their vehicles clean
- patience and self-discipline.

They should enjoy driving, taking a methodical approach to cleaning and servicing vehicles, and talking to people.

Educational Requirements

In Alberta, chauffeurs must have a **Class 4 Alberta Operator's License** which requires a medical examination and successful completion of a written exam and a road test. Depending on the municipality in which they work, chauffeurs may also be required to have a municipal chauffeur's permit. The municipal permit may require successful completion of an English exam and a test of the applicant's knowledge of the city, or a police abstract indicating that the applicant has no criminal convictions. Demerit points and moving convictions are monitored by municipalities and employing companies. Often, companies will not allow drivers to work if there are more than six demerit points on their records.

In general, employers prefer to hire job applicants who:

- have good driving records
- have strong personal and work references
- know the local area and house numbering systems, and the locations of important buildings, landmarks and

popular restaurants and bars
- can describe local points of interest.

Some limousine companies require their chauffeurs to be 25 years of age or older so they qualify for lower insurance rates.

Employment and Advancement

(section revised JANUARY 2006)

Most chauffeurs work for limousine or cab companies but some work for individual employers or are self-employed. There are usually opportunities for part-time, on-call work with limousine companies for chauffeurs who have good driving records.

Chauffeurs are part of the much larger National Occupational Classification 7413: Taxi and Limousine Drivers and Chauffeurs. In Alberta, most people employed in this classification work in the **Transportation and Warehousing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:
- trends and **events** affecting overall employment (especially in the Transportation and Warehousing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 4,650 Albertans are employed in the Taxi and Limousine Drivers and Chauffeurs occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since chauffeurs form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for chauffeurs.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Chauffeurs' earnings vary considerably, depending on the employer and the number of hours worked. Chauffeurs may be paid by the hour, a percentage of the amount charged to customers or a monthly salary. They may be required to purchase expensive uniforms.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Taxi and Limousine Drivers and Chauffeurs occupational group working part-time or full-time earned from **$12,600 to $42,600 a year.** The average salary was **$19,700 a year.**

© Government of Alberta, Human Resources and Employment

Chef

Produced MARCH 2003

Chefs are managers who plan, direct and participate in food preparation and cooking activities in restaurants, hotels, institutions and other food establishments.

NOC Number(s): 6241.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M I**

Duties

Chefs' duties and responsibilities vary from organization to organization but, in general, they:

- supervise cooks and other kitchen staff in the preparation, cooking and presentation of food,
- order food and kitchen supplies based on best price and budget
- check orders received for quantity and quality of product
- create new recipes to please customers
- hire and supervise kitchen staff
- create menus
- estimate labour and food costs and modify menus to stay within budget
- check the quality of raw and cooked food products
- ensure that sanitation standards are maintained
- assist with staff development and training
- meet with other managers in the organization
- promote their establishments by practicing good public relations.

Where there are a number of cooks working for the same employer, they usually specialize in the preparation of particular types of foods. For example, they may be:

- **chefs saucier** who prepare, season and cook sauces and the meat and fish items they accompany, and prepare soups, casseroles and related dishes
- **chefs garde manger** who prepare and present salads, cold dishes and cold hors d'oeuvres and buffets
- **chefs entremetier** who prepare, cook and present vegetables, pasta and egg dishes
- **chefs patissier** who prepare, cook and present desserts and pastries and may also prepare ice creams and sherbets.

Working Conditions

Working conditions for chefs vary with the type of organization. Large establishments may have modern equipment, well-lighted work areas and air-conditioning. Older and smaller establishments may not be as well equipped.

Chefs frequently work in close quarters that can be very noisy, especially during busy periods. They must stand for hours at a time and work near hot ovens and grills. Some lifting up to 10 kilograms may be routinely required.

Work hours vary depending on the type and size of the establishment. Large establishments which are open 24 hours a day typically have two to three shifts a day. Holiday, weekend work and overtime is common.

Personal Characteristics

Chefs need the following characteristics:

- good health and stamina
- a keen sense of taste and smell
- excellent hand-eye co-ordination
- good arithmetic skills

- a good memory for details
- artistic and creative talent
- excellent communication skills, interpersonal skills and team-building skills
- the ability to remain calm in hectic circumstances
- excellent organizational skills.

The should enjoy planning and organizing menus and methods, supervising the work of others, and using tools and equipment to perform tasks requiring precision.

Educational Requirements

(section revised NOVEMBER 2004)

Almost all chefs have some technical qualification obtained through **apprenticeship** training or related post-secondary education.

Alberta has a formal apprenticeship program for cooks (for more information, see the Cook occupational profile). Outside of the apprenticeship program, the following post-secondary institutions offer related training programs:

- **Lethbridge Community College** offers a Culinary Careers program. The entrance requirement is 65 high school credits with at least 60 per cent in English 23 and Math 23 or equivalent. Applicants are required to complete a personal medical profile and update their immunization record prior to entering the program.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers one year certificate and two year diploma programs in Culinary Arts. The minimum entrance requirement is Grade 10 or equivalent including English and math. However, an average of 65 per cent in Grade 12 English and math may be required to gain admission to this quota program.
- **Portage College** in Lac La Biche offers a 33-week Cooking certificate program. The entrance requirement is Grade 10 or equivalent with English 10 or 13 and Math 10 or 13, Pure Math 10 or Applied Math 10.
  Portage College also offers a 16-week Culinary Arts certificate program. The entrance requirement is Grade 9 or equivalent. All students in this program are eligible for student membership in the Canadian Federation of Chefs and Cooks (CFCC).
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a Professional Cooking program. The Professional Cooking program has three, 16-week semesters and an eight week work experience term between the second and third semesters. The entrance requirement is at least 35 high school credits (Grade 10) with Grade 10 math and English 10 or 13 or Humanities 10.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

In addition to technical training, chefs usually require three to six years of experience in commercial food preparation. Chefs who have international reputations have usually apprenticed under masters at famous restaurants in some of the major cities around the world.

The **Canadian Federation of Chefs and Cooks** and the Canadian Culinary Institute, in conjunction with learning institutions in various locations, offer a five-course continuing education program leading to the designation Certified Chef de Cuisine. Applicants must have at least five years of industry experience including two years of experience in a supervisory position after achieving Red Seal certification (for more information, see the Cook occupational profile).

Employment and Advancement

(section revised JANUARY 2006)

Most chefs are employed in privately owned restaurants or hotels, but some are employed by:

- educational institutions
- hospitals
- nursing and personal care facilities
- civic and social organizations
- catering companies
- railways and cruise lines.

Experienced chefs may advance to sous-chef and executive chef positions, or purchase and manage their own establishments. Opportunities for advancement depend largely on acquiring better cooking and management skills. Graduates of technical or apprenticeship programs tend to advance more quickly than those who do not have formal qualifications.

In Alberta, over 75 per cent of people employed as chefs work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 3,400 Albertans are employed in the Chefs occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 80 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for chefs vary a great deal, depending on the size and location of the establishment, volume of business and the chef's reputation.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Chefs occupational group working part-time or full-time earned from **$12,300 to $109,900 a year.** The average salary was **$31,000 a year.**

Most chefs earn from **$21,000 to $50,000 per year (2003 estimate).**

Chemical Engineer

Produced JUNE 2004

Chemical engineers develop processes, design equipment and provide technical and management services for plants that convert raw materials into a wide range of end products (e.g. chemicals, pharmaceuticals, food products, fuels, plastics, metals).

NOC Number(s): 2134
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I O D**

Duties

In research laboratories, chemists, biochemists and materials scientists develop metal and chemical products (e.g. drugs, detergents, fertilizers, plastics, fuels, fabrics) and engineers develop the processes required to produce them commercially. Chemical engineers adapt the small-scale production and processes used in the laboratory to large-scale, commercial and industrial production.

In general, chemical engineers:

- design, maintain and manage chemical, biochemical, pharmaceutical and materials processing plants
- trouble-shoot problems in industrial processing plants
- ensure efficient, safe and environmentally responsible plant operations
- supervise technologists, technicians and other engineers engaged in support activities
- choose the best instruments for measuring pressure, temperature, flow rate, composition, etc.
- design and operate quality and environmental control systems
- advise management regarding the layout of industrial plants and the installation and sizing of equipment
- determine the most effective processes for commercial production
- conduct economic evaluations of projects to find the most cost effective options
- design and develop new and better processes and equipment for converting raw materials into products
- use computers to simulate, model and control processes.

Chemical engineers may work in one or more of the following areas.

- In **research and development,** chemical engineers conduct experiments to develop new products and processes. They usually work with a team of scientists (e.g. chemists, metallurgists, biochemists, material scientists, physicists) and engineers (e.g. mechanical, metallurgical, electrical engineers).
- In **process design,** chemical engineers use existing data and design methods to design equipment and operating specifications for industrial plants. Cost, safety and environmental concerns are vital components of plant design. Chemical engineers working in this phase often work with financial experts, technologists and engineers from other disciplines.
- In **plant operations,** chemical engineers ensure that the equipment in their unit operates efficiently and safely, and that the desired quantity and quality of product is produced. This includes trouble-shooting, process improvement and equipment modification. They work with technologists, operators and other engineers and usually report to production managers.

Working Conditions

Chemical engineers work in office, industrial plant and laboratory environments. Those who work in production may come in contact with hazardous machinery and chemicals on a regular basis, or be required to climb process equipment up to ten stories high. Lifting up to 25 kilograms may be required.

Chemical engineers may be "on-call" after hours. The work can be stressful when processes do not work as planned.

Personal Characteristics

Chemical engineers need the following characteristics:

- the ability to think analytically and solve problems
- an aptitude for physics, mathematics and chemistry
- the ability to visualize complex processes and equipment
- good oral and written communication skills
- an interest in and an aptitude for management
- a willingness to improve their knowledge and skills on an ongoing basis
- the ability to work effectively in teams with people from various disciplines and educational backgrounds.

They should enjoy being innovative, doing precise work, making decisions and directing the work of others.

Educational Requirements

The minimum education requirement for chemical engineers is a **bachelor's degree in chemical engineering.** A graduate degree is usually required for research or university teaching positions.

Programs leading to a bachelor of science (B.Sc.) degree in chemical engineering, as well as master's and doctoral degrees in chemical engineering, are offered at the **University of Alberta** in Edmonton and the **University of Calgary**. The admission requirement for the four year bachelor's degree programs is a high school diploma with an overall average of at least 78 or 80 per cent in English 30, Pure Math 30, Math 31, Chemistry 30 and Physics 30.

Industry work experience prior to graduation is recommended. A co-operative education or internship program, consisting of periods of academic study alternating with periods of planned work experience in industry, is available through the Faculties of Engineering at both the University of Alberta and the University of Calgary. The co-operative engineering degree program usually requires five years to complete.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study to university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Chemical engineers work wherever there is a process of conversion (e.g. in pulp and paper manufacturing, petroleum refining, oil sands extraction, energy conversion, polymer processing, metal extraction and refining, power generation, food processing, adhesives and coatings production). Some chemical engineers are employed by instrumentation and control companies, engineering design companies and environmental companies and agencies. A growing number work in the field of nanotechnology (dealing with objects less than 100 nanometres in length) on applications ranging from developing new materials to creating new medical devices.

A typical first job after graduation is in process development. In these initial positions, junior engineers usually work on diverse assignments under the supervision of more senior engineers to gain experience and learn company procedures. With experience, chemical engineers may progress from production management positions responsible for a single unit or product to operations management positions responsible for large industrial complexes. Some become chief executive officers.

In Alberta, over 75 per cent of people employed as chemical engineers work in the following industries:

- **Professional and Technical Services**

- **Oil and Gas Extraction**
- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,850 Albertans are employed in the Chemical Engineers occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Chemical Engineers occupational group working part-time or full-time earned from **$47,700 to $132,900 a year.** The average salary was **$92,000 a year.**

© Government of Alberta, Human Resources and Employment

Chemical Engineering Technologist

Produced JULY 2004

Chemical engineering technologists are involved in process design, plant engineering, environmental control, engineering sales and plant operations. They may work independently or in an engineering team.

NOC Number(s): 2211.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Chemical engineering technologists may work in engineering offices, sales offices or production facilities.

In engineering offices, they may work on process engineering, operation engineering, production engineering or project co-ordination. In general, they:

- run computer-based process simulations
- provide technical engineering support
- trouble-shoot problems and optimize operations
- prepare engineering drawings
- evaluate and prepare regulatory applications
- redesign process equipment.

In technical sales offices, chemical engineering technologists:

- act as liaisons between plant engineering personnel and equipment suppliers
- prepare quotes and technical documents
- co-ordinate projects.

In production facilities, they:

- operate process control equipment
- gather plant operating data for design purposes
- do feasibility studies
- co-ordinate production
- supervise construction activity.

Chemical engineering technologists may also:

- do environmental impact assessments and environmental audits, decommission facilities and do site reclamation work
- prepare cost estimates and construction schedules for production factilites
- assist in the design of new processes and production plants
- evaluate the economic and technical feasibility of modifying, replacing or installing new plant equipment
- trouble-shoot and solve problems to maximize production
- prepare process and instrument drawings
- design and implement corrosion management programs for pressure vessels and pipelines
- operate complex plants and processes, and make process improvements.

Chemical engineering technologists use scientific principles to solve technical problems in a safe and cost effective manner. They may work in design or operate small scale models of equipment (prototypes) created to design or evaluate manufacturing processes or equipment.

Working Conditions

Chemical engineering technologists may work in office environments or industrial plant facilities. In production environments, they may work shifts.

Personal Characteristics

Chemical engineering technologists need the following characteristics:

- the ability to pay attention to details
- persistence and a desire to be accurate
- strong problem-solving skills
- the communication and interpersonal skills required to work in a team environment and possibly supervise others.

They should enjoy working with people, analyzing data and performing calculations to solve problems, and taking a methodical approach to their work.

Educational Requirements

The minimum educational requirement for working as a chemical engineering technologist is a related **two year diploma of technology**.

- **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Chemical Engineering Technology diploma program. The minimum admission requirement is a high school diploma or equivalent with English 30 or 33, Pure Math 30 or Math 30 (or at least 60 per cent in Math 33), and one of: Science 30, Physics 30 or Chemistry 30. Normal colour vision is an asset. Applicants presenting Applied Math 30 will be assessed and upgrading may be required.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Chemical Engineering Technology diploma program. The minimum admission requirement is a high school diploma or equivalent with English 30 or 33, Pure Math 30 or Math 30, Chemistry 30, and either Physics 20 or Science 30 or completion of the Pre-Careers program at SAIT.

Graduates from both programs may be given two years of credit toward the Bachelor of Applied Petroleum Engineering Technology program offered by SAIT.

Keyano College in Fort McMurray offers a one year transfer program for the Chemical Engineering Technology program at SAIT. The entrance requirement is a high school diploma with English 30 or 30-1, Math 30 or Pure Math 30, Physics 30 and Chemistry 30.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Chemical engineering technologists are usually members of operating teams that include engineers, other technologists and technicians involved in the operation of industrial plants, mills and refineries. They may also work in environmental consulting, chemical or equipment sales, or as chemical process operators.

Typical employers include:

- tar sand and heavy oil extraction plants
- chemical, fertilizer and petrochemical production facilities
- oil and gas plants
- food processing companies
- pulp and paper companies
- technical sales organizations

- environmental engineering firms
- service and consulting firms.

Experienced chemical engineering technologists may advance to senior technical supervisor or staff supervisor positions. Some chemical engineering technologists take additional training and teach in technical institutes. Others work as technical writers or as salespersons for chemical products.

Chemical engineering technologists are part of the much larger National Occupational Classification 2211: Chemical Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Food and Beverage Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,150 Albertans are employed in the Chemical Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since chemical engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for chemical engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Chemical Technologists and Technicians occupational group working part-time or full-time earned from **$23,500 to $89,300 a year.** The average salary was **$53,600 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

Chemical Technologist

Produced JUNE 2004

Chemical technologists may work independently or with a team of chemists, chemical engineers and related professionals involved in quality control testing, product research and development, or environmental analysis.

NOC Number(s): 2211.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Chemical technologists acquire, install, maintain and operate analytical equipment and technical instruments such as those required for environmental analysis. They may also conduct experiments on products being developed or improved.

Duties and responsibilities vary from one position to another but, in general, chemical technologists:

- carry out chemical reactions
- prepare standards and samples
- analyze samples using bench methods and sophisticated instrumentation
- prepare reports and required documentation
- maintain and upgrade laboratory instruments and equipment
- manage projects and make presentations about results.

Working Conditions

Chemical technologists may work alone or in teams. They are usually employed in industrial plants or laboratories and may be required to work shifts. They often work with hazardous substances and must observe appropriate safety precautions.

Personal Characteristics

Chemical technologists need the following characteristics:

- strong analytical skills
- an aptitude for science and mathematics
- good colour vision
- manual dexterity
- strong oral and written communication skills
- the ability to pay close attention to details.

They should enjoy using instruments and equipment to perform tasks requiring precision, analyzing data and supervising the work of technicians and others.

Educational Requirements

The minimum educational requirement for chemical technologists is **a two year chemical technology diploma**.

In Alberta, the following institutions offer two year programs in Chemical Technology:

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton. The entrance requirement is a high school diploma or equivalent with English 30 or 33, Pure or Applied Math 30, and Chemistry 30, or completion of the Pre-Technology (Stream Two) program at NAIT.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Chemical Technology diploma program. The entrance requirement is a high school diploma or equivalent with at least 50 per cent in English 30 or 33, Pure Math 30 or Math 30, and Chemistry 30.

These are quota programs so admission is competitive.

Both NAIT and SAIT have co-op options where the student works in a paid laboratory position from four months to a year, sometime before their last semester.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Certification is voluntary.

The Alberta Society of Engineering Technologists (ASET) offers certification for graduates of recognized education programs who have two years of successful experience in industry.

Employment and Advancement

(section revised JANUARY 2006)

Chemical technologists usually work in:

- the chemical, petro-chemical, mining, metallurgical, agricultural, biotechnology, pharmaceutical or food industries
- research institutes
- government health or environmental control agencies.

Advancement opportunities vary depending on the size and nature of the organization and the individual's qualifications. Experienced chemical technologists may move into sales or management positions, or own and operate their own laboratories.

Chemical technologists are part of the much larger National Occupational Classification 2211: Chemical Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Professional and Technical Services**
- **Oil and Gas Extraction**
- **Public Administration**
- **Food and Beverage Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,150 Albertans are employed in the Chemical Technologists and Technicians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since chemical technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for chemical technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Chemical Technologists and Technicians occupational group working part-time or full-time earned from **$23,500 to $89,300 a year.** The average salary was **$53,600 a year.**

Chemist

Produced JULY 2004

Chemists conduct research and develop new or improved products and processes, and test and evaluate their quality and safety.

NOC Number(s): 2112
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O D**

Duties

Chemists study atoms and molecules and how they interact with and impact their surroundings. Their knowledge of molecular structure and properties, transformations and interactions may be applied in fields ranging from the development of consumer products (e.g. fuels, plastics, drugs, foods) to field production in the oil and gas industry. They may be primarily involved in:

- analysis (soil, water, air, forensic, toxicological, environmental, food production, waste analysis, pollution control, corrosion control, etc.)
- quality control
- research and development (e.g. new materials for chemical, pharmaceutical, electronics, defence, metals or food production).

Chemists usually specialize in a particular area such as:

- analyzing the components of solid, liquid or gas mixtures
- developing analystical instrumentation and related analytical methods
- studying the physical characteristics of matter to better understand the fundamental principles of chemical structure and behaviour
- studying carbon-based compounds (organic chemistry) or those that are not carbon-based (inorganic chemistry)
- studying the chemistry of living things (for more information, see the Biochemist occupational profile)
- working with polymers (plastics, rubber and synthetic fibres) and developing related materials (e.g. catalysts, coatings, resins, fabrics)
- guiding research by eliminating non-feasible options and highlighting those with the best chance of success.

Working Conditions

Chemists often work in research and development teams. They work variable hours in offices, laboratories and classrooms. Those employed in research facilities, industrial plants or hospitals may be required to work shifts.

Chemists must understand and observe safety precautions to avoid injury when handling hazardous substances.

Personal Characteristics

Chemists need the following characteristics:

- good speaking, reading and writing skills
- mathematical ability
- problem-solving skills
- the ability to work independently as well as with a team
- patience, persistence and the ability to pay attention to detail.

They should enjoy synthesizing information and finding innovative solutions to problems, working with instruments at tasks requiring precision and directing the work of others.

Educational Requirements

(section revised JULY 2005)

Most chemists begin their post-secondary education by taking a four year Bachelor of Science (B.Sc.) degree in chemistry. Those who want to specialize further or carry out research usually continue their education to the master's (M.Sc.) or doctoral (PhD) level. In general, the entrance requirement for a master's degree program in chemistry is an acceptable average in a **four year B.Sc. degree program in chemistry (or equivalent)**. A PhD is often required for research and post-secondary teaching positions.

In Alberta, the following post-secondary institutions offer **four year** degree programs in chemistry.

- **Concordia University College of Alberta** in Edmonton offers a four year B.Sc. degree program. The entrance requirement is an average of at least 60 per cent in English 30, Pure Math 30, Chemistry 30 and two other appropriate Grade 12 subjects (including an appropriate science subject).
- **The King's University College** in Edmonton offers a four year B.Sc. degree program. The entrance requirements is an average of at least 60 per cent in English 30, Chemistry 30, Pure Math 30 and two other appropriate Grade 12 subjects.
- The **University of Alberta** in Edmonton offers four year B.Sc. degree programs. The entrance requirement is an average of 65 to 80 per cent in English 30, Pure Math 30, Chemistry 30, Physics 30 and one other appropriate Grade 12 science (Math 31 recommended). The University of Alberta also offers and industrial internship for B.Sc. Honors or Specialization students, and programs leading to master's (M.Sc.) and doctoral (PhD) degrees in chemistry. The University of Alberta in Camrose also offers bachelor degree programs in chemistry.
- The **University of Calgary** offers a four year B.Sc. degree program in chemistry and five year co-operative education B.Sc. degree program in applied chemistry. The applied chemistry program includes work experience in a university, industrial or government laboratory. The entrance requirement is an average of at least 70 per cent in English 30, Pure Math 30, Chemistry 30, one of: Biology 30, Physics 30 or Math 31, and one other appropriate Grade 12 subject. Math 31 and Physics 30 are recommended. The University of Calgary also offers programs leading to master's (M.Sc.) and doctoral (PhD) degrees in chemistry.
- The **University of Lethbridge** offers four year degree programs in chemistry. The entrance requirement is an average of at least 65 per cent (68 per cent will be required in the Fall of 2005) in English 30, Pure Math 30, Chemistry 30, Physics 30 and one other Grade 12 subject (Math 31 recommended). The University of Lethbridge also offers a program leading to a master's degree in chemistry.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Professional Chemist is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Professional Chemist, you must be a registered member of the Association of the Chemical Profession of Alberta (ACPA). You do **not** have to be registered if you do not call yourself a Professional Chemist.

Employment and Advancement

(section revised JANUARY 2006)

Chemists are employed in medical, industrial, government, academic and agricultural laboratories. Some chemists work as marketing or sales representatives or as consultants, and some start their own consulting and service businesses. Those who have a Bachelor of Education (B.Ed.) degree may teach chemistry at the high school level.

Experienced chemists may advance to senior management positions. Completion of an additional degree is often required to move into fields such as environmental law or business.

In Alberta, over 75 per cent of people employed as chemists work in the following industries:

- **Petrochemicals, Rubber, Plastics and Chemicals Manufacturing**
- **Health Care and Social Assistance**

- **Professional and Technical Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,050 Albertans are employed in the Chemists occupational group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Chemists occupational group earned **up to $104,400 a year**. Those with three years of experience earned from **$61,400 to $95,000 a year.** The average salary was **$83,900 a year**.

Child and Youth Care Worker

Produced NOVEMBER 2005

Child and youth care workers work to improve the physical, emotional, intellectual and social development of vulnerable children and adolescents.

NOC Number(s): 4212
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M I

Duties

Child and youth care workers may work with young people who are:

- temporarily housed in government or private homes, agencies, treatment centres or group homes
- involved in community youth programs, family support or foster care programs, or school based programs.

In general, child and youth care workers:

- establish trusting and meaningful one-to-one relationships with children and adolescents
- implement strategies such as planned daily activities, co-ordinated treatment interventions, structured environments, and organized recreational and social activities
- help youth identify personal strengths and resources for positive change
- help develop and maintain individual and group treatment programs
- help control acts of aggression and depressive, destructive or self-injurious behaviours
- act as a resource for clients and their families
- handle behaviour management, safety and security programming for young people in residential centres
- write progress reports about their clients.

Child and youth care workers often work as part of a team of social workers, psychologists, recreation therapists, foster care workers, teachers and other professionals. They help integrate the efforts of all these specialized professionals with children and adolescent youth who may be experiencing emotional or behavioural challenges. Due to their on-going close involvement with clients, child and youth care workers are in an ideal position to help children learn to be advocates for themselves and to take responsibility for their actions.

The number of children assigned to each worker varies depending on the needs of each child and the type of service being offered. The average is one worker for three to five children.

Working Conditions

Child and youth care workers may be required to work shifts (days, evenings and sometimes nights, seven days a week). The work can be physically and mentally demanding, and may require restraining young people.

Personal Characteristics

Child and youth care workers need the following characteristics:

- excellent written and oral communication skills
- decision-making and problem-solving skills
- the desire, ability and maturity required to engage in intense relationships with young people
- the ability to be reliable and consistent
- the flexibility and creativity required to adopt new ways to do things
- the ability to work in a team environment with children, families and other professionals.

They should enjoy working with young people, keeping in touch with others involved in helping their clients, and finding innovative solutions to problems.

Educational Requirements

(section revised DECEMBER 2005)

Child and youth care workers must be familiar with the development, and educational, emotional, social and recreational needs of young people. Employers generally prefer to hire applicants who have related post-secondary education, preferably a diploma or degree in child and youth care or a related social science degree. Previous work experience with young people is a definite asset. In some settings, knowledge of native culture and language may be required.

Three year and four year Bachelor of Arts (BA) degree programs in social sciences are offered by post-secondary institutions throughout Alberta. The following institutions offer programs that are specifically related to child and youth care:

- **College Columbia**, a private vocational school in Calgary, offers Human Service Professional program which may be taken full-time (25 weeks) or part-time (50 weeks). The entrance requirement is a high school diploma with a 60 per cent average, or equivalent.
- **Gardner College - A Centre for Christian Studies** in Camrose offers a two year Child and Youth Care Worker diploma program. The entrance requirement is a high school diploma or equivalent.
- **Grant MacEwan College** in Edmonton offers a two year Child and Youth Care diploma program which may be taken full-time or part-time (evenings or by distance self-study). Applicants must be at least 19 years of age and have a high school diploma or equivalent. In September 2006, the College plans to offer a four year Bachelor of Child and Youth Care degree program.
- **Keyano College** offers one year certificate and two year diploma programs in Aboriginal Child and Family Services in Edmonton. The first year of the program also is available in WEB CT format through eCampus Alberta. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), or equivalent.
- **Lakeland College** in Vermilion offers a two year Child and Youth Care diploma program. The entrance requirement is a high school diploma with at least a 65 per cent in English Language Arts 30-1 or English 30 (or 80 per cent in ELA 30-2 or English 33). Applicants must be in good health, highly motivated, emotionally mature and stable.
- **Lethbridge Community College** offers a two year Child and Youth Care diploma program. The entrance requirement is a high school diploma with at least a 60 per cent in English Language Arts 30-1 or English 30 (or 70 per cent in ELA 30-2 or English 33), Social Studies 30 (or 70 per cent in Social Studies 33) and one other 30 level course, or equivalent. The College also offers a 22 week Fetal Alcohol Spectrum Disorder Support Worker program.
- **Medicine Hat College** offers a two year Child and Youth Care diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 (or English 30 or 33), one 30 or 31 level subject, and three other 30, 31 or 33 level subjects or CTS course.
- **Mount Royal College** in Calgary offers a two year Child and Youth Care Counselor diploma program. The entrance requirement is a minimum of 19 years of age and a high school diploma with English Language Arts 30-1 or 30-2, or equivalent. The College also offers a four year applied degree program in Child Studies. The entrance requirement is a high school diploma with a 60 per cent average in English Language Arts 30-1, Social Studies 30 and three other appropriate Grade 12 subjects.
- **Rocky Mountain College**, a private vocational school in Calgary, offers a four year BA in Human Services degree program with a specialization in Child and Youth Care. The entrance requirement is a 65 per cent average in four matriculation level courses.

Admission requirements may include a personal interview, medical immunization records and testing, first aid training, or criminal record and Child Welfare information checks. Post-secondary institutions may give students credit for prior learning. For information about mature student admission policies, please check institution calendars or websites.

In addition to formal education programs, most child and youth treatment centres offer orientation or volunteer programs, and in-service training.

Other Requirements

The Child and Youth Care Association of Alberta offers a certification program for child and youth care workers. Certification is not mandatory in this occupation but it may be asset when seeking employment.

Employment and Advancement

(section revised JANUARY 2006)

Child and youth care workers are employed by:

- provincial government departments
- school boards
- private agencies (for example, treatment centres, group homes, family support and independent living programs)
- community youth programs (for example, youth emergency shelters, community leagues, schools, after-school programs).

Experienced child and youth care workers may advance to supervisory positions. Further advancement generally requires additional education.

Child and youth care workers are part of the larger National Occupational Classification 4212: Community and Social Service Workers. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 9,600 Albertans are employed in the Community and Social Service Workers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since child and youth care workers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for child and youth care workers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Community and Social Service Workers occupational group working part-time or full-time earned from **$14,100 to $104,900 a year**. The average salary was **$27,800 a year**.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Chiropractic Assistant

Produced DECEMBER 2004

Chiropractic assistants perform a variety of support tasks to assist chiropractors with patient care.

NOC Number(s): 3414.2
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S o**

Duties

Chiropractic assistants work under the direct supervision of chiropractors. They may perform mostly clerical or mostly clinical duties or both, depending on the size of the office. The more employees in an office, the more likely chiropractic assistants will specialize in one type of work or the other.

In general, chiropractic assistants:

- perform routine reception and clerical duties such as answering the telephone, scheduling appointments, maintaining chiropractic health records and ordering supplies (for more information, see the Administrative Assistant occupational profile)
- greet patients and show them to adjustment rooms
- help patients complete chiropractic health histories
- connect and operate treatment machines such as massagers, electro-therapy machines and ultrasound equipment
- apply ice packs and heat packs
- assist chiropractors with patient health education
- accept payment for health products
- keep examining and waiting rooms clean and orderly
- perform accounting-related duties such as keeping track of accounts payable and receivable, bank deposits and payroll (for more information, see the Accounting Technician occupational profile)
- process claims for health insurance, motor vehicle insurance or Workers Compensation.

Working Conditions

Chiropractic assistants spend much of their time on their feet. They may be required to lift items weighing up to 10 kilograms.

Hours of work vary depending on chiropractors' office schedules. For example, they may work weekdays and some Saturdays or evenings. Some chiropractic assistants work part-time.

Personal Characteristics

Chiropractic assistants need the following characteristics:

- a mature attitude toward the human body
- the ability to follow directions closely
- good communication skills
- the ability to work effectively as part of a team
- the ability to work on several tasks simultaneously
- the ability to establish rapport with and instill confidence in patients who may be in pain.

They should enjoy having guidelines for their work and assisting patients.

Educational Requirements

Chiropractic assistants are generally **trained on the job**. A high school diploma is usually required but additional

employment requirements vary depending on the duties of the particular position. Computer and bookkeeping skills are a definite asset.

Employment and Advancement

(section revised JANUARY 2006)

Chiropractic assistants work for chiropractors in private practice.

Most chiropractors employ a small number of assistants, usually only one or two, so opportunities to advance to supervisory positions are limited. Advancement generally takes the form of opportunities to learn new skills.

Chiropractic assistants are part of the larger National Occupational Classification 3414: Other Assisting Occupations in Support of Health Services. In Alberta, most people employed in this classification work in the following industries:

- **Retail Trade**
- **Health Care and Social Assistance.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 7,100 Albertans are employed in the Other Assisting Occupations in Support of Health Services occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 140 to 220 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since chiropractic assistants form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for chiropractic assistants.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Assisting Occupations in Support of Health Services occupational group working part-time or full-time earned from **$11,900 to $58,200 a year.** The average salary was **$23,700 a year.**

Chiropractor

Produced DECEMBER 2004

Chiropractors are health professionals concerned with the diagnosis, treatment and prevention of mechanical disorders of the musculoskeletal system and the effects of these disorders on the function of the nervous system and general health. They emphasize manual treatments including spinal manipulation and adjustment.

NOC Number(s): 3122
Minimum Education: 7 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I S M**

Duties

In general, chiropractors:

- diagnose health problems by reviewing patients' health and medical histories; questioning, observing and examining patients; and interpreting x-rays
- advise patients regarding recommended courses of treatment
- treat patients which often involves a series of spinal adjustments and exercises to correct the musculoskeletal system, and to restore and maintain the function of the nervous system
- recommend supportive treatments such as dietary and lifestyle changes
- refer patients to other health practitioners when appropriate.

Chiropractors may take x-rays themselves or refer patients to medical x-ray technologists.

Working Conditions

Most chiropractors work in their own clinics or with other chiropractors. Some chiropractors share offices with other health providers such as massage therapists, physiotherapists or family physicians.

Chiropractors must stand for much of their working day. Some upper body strength is required to perform specific procedures and assist in patient movement.

Personal Characteristics

Since the work is demanding and they often deal with people who are in pain, chiropractors need the following characteristics:

- a pleasing personality
- good listening skills
- kindliness and empathy
- patience and perseverance
- endurance
- good health
- good stress management skills
- a high degree of manual dexterity.

They should enjoy analyzing information to determine the most effective treatments, advising patients and adjusting or manipulating the patients to promote health and wellness.

Educational Requirements

Two post-secondary institutions in Canada offer chiropractic programs of study:

- the **Canadian Memorial Chiropractic College** in Toronto
- the **Universite du Quebec** in Trois Rivieres (instruction in French).

In Canada, the minimum entrance requirement to four year chiropractic programs is successful completion of at least three years of post-secondary education. Recommended pre-chiropractic courses include:

- chemistry, biology and introductory psychology in first year
- organic chemistry and physiology in second year
- biochemistry, micro-biology and physiology in third year.

Most entrants into chiropractic programs have a bachelor's degree in arts or science (BA or B.Sc.).

Chiropractic colleges in the United States also are recognized by the College of Chiropractors of Alberta. In the United States, the entrance requirement for some colleges is two years of university studies.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Chiropractic Profession Act and Chiropractic Profession Regulation, only registered members of the College of Chiropractors of Alberta (CCOA) may call themselves Chiropractors or practice chiropractic.

Employment and Advancement

(section revised JANUARY 2006)

Chiropractors operate independent practices as sole proprietors or join other chiropractors or health providers to form a clinic. Chiropractors may offer services in the areas of occupational and industrial health, athletic injuries, x-ray interpretation, orthopedics, rehabilitation, nutrition, geriatrics or pediatrics.

It may take some time and considerable capital expenditure to build a thriving, profitable practice. Business skills and knowledge are required.

In Alberta, people employed as chiropractors work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 800 Albertans are employed in the Chiropractors occupational group which is expected to grow 2.6 to 3.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

The demand for chiropractic service is greatest in towns and rural areas.

Salary

(section revised OCTOBER 2005)

In 2003, Albertans in theChiropractors occupational group an average salary of **$61,100 per year** (2003 Alberta Wage and Salary Survey).

Choral Conductor

Produced MAY 2003

Choral conductors organize, direct and conduct choral groups such as community and school choirs, church choirs, children's choirs, small chamber choirs, college choral ensembles, opera choruses and other groups that specialize in particular periods or styles of music.

NOC Number(s): 5132.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D I M**

Duties

Depending on the type of ensemble, choral conductors may:

- conduct rehearsals and performances
- choose suitable repertoire music
- work with clergy to select music for church services
- work with instrumentalists and solo vocalists
- conduct auditions, and recruit and educate performers
- plan rehearsal and performance schedules
- book locations, accompanists and instrumentalists
- promote the ensemble, plan and implement fund raising activities and arrange tours
- co-ordinate parent and support groups.

Rehearsals are a major part of a choral conductor's job, especially around performance dates and before competitions. Many choral groups are amateur ensembles so rehearsals must be scheduled when volunteer members are available, often during evenings or on weekends.

Choral conductors use conducting techniques to communicate their musical intentions (tempo, phrasing, tone, colour, volume, etc.). A conductor's preparation and enthusiasm contributes greatly to the success of rehearsals and to the quality of the final performance.

When choosing music, conductors consider:

- the size of the ensemble
- the interests and abilities of ensemble members
- the need for variety and challenge for both the audience and performers
- suitability for different performance situations
- the availability of scores
- budget limitations.

Unless choral conductors are fortunate enough to have a manager or administrative assistant, they are usually responsible for administrative tasks such as:

- applying for grants and establishing a budget
- scheduling concerts to co-ordinate with other choral, symphonic and operatic engagements
- designing and printing programs and promotional materials
- ordering musical scores
- arranging the seating of the choir
- insisting on regular attendance and commitment from members.

Choir members may be enlisted to help with administrative functions.

Once the regular performance season is over, choirs often tour locally, nationally or internationally. Choral conductors may co-ordinate tours themselves or hire touring companies to arrange concert dates, venues, accommodation and transportation for longer tours.

Working Conditions

Choral conductors spend some time alone preparing scores and performing administrative tasks; however, much of their time is spent with the members of their choirs. They often work very long hours in rehearsals and preparing new musical works for the group. Most rehearsals and performances are in the evenings and on weekends.

Personal Characteristics

Choral conductors need the following characteristics:

- the natural talent for rhythm, pitch and shaping of phrases needed by all musicians
- self-confidence and leadership skills
- good communication skills
- a genuine appreciation of each person's contribution to the group
- the ability to deal with a work schedule that includes long hours of score-study, planning and rehearsing.

They should enjoy taking charge and controlling situations, and developing innovative approaches.

Educational Requirements

General musical ability and a thorough music education are essential. Choral conductors must be able to detect and correct problems related to various aspects of choral music such as rhythm, inonation, vocal tone and diction.

Formal training requirements for choral conductors vary greatly.

- Church choir conductors may be congregation members who have musical experience and a suitable personality, or professional musicians who have degrees in conducting or organ performance. Community choir leaders come from equally varied backgrounds.
- Conductors of school choirs may be teachers who have a special interest in music, or teachers who have degrees in both music and education.
- Positions in colleges and universties often require a doctoral degree (PhD) in choral conducting.
- Conductors of professional groups are hired on the basis of their performance record and an audition.

The **Alberta Choral Federation** offers resources and programs throughout the province for interested individuals, choir members, choral groups, conductors and organists. These programs cover topics such as choral music, conducting techniques, administration of choral groups and choral repertoire.

For a listing of Alberta post-secondary institutions that offer programs in music, see the Instrumental Musician and Singer occupational profiles.

Those wishing to teach music and conduct groups in schools may take any of the following education routes:

- a four year Bachelor of Education (B.Ed.) degree specializing in music
- a five year combined Bachelor of Music/B.Ed. degree
- a three year or four year bachelor's degree in music followed by two or more years in a Bachelor of Education (After Degree) program.

For a listing of Alberta post-secondary institutions that offer education degree programs, see the Secondary School Teacher occupational profile.

Employment and Advancement

Choral conductors may work with:

- elementary and secondary school choirs
- university and college choirs
- church choirs
- professional choirs
- amateur groups.

Working as a choral conductor in a school often involves teaching courses in vocal techniques, conducting, music theory and band. In some schools, conductors also teach other subjects as well.

University and college positions are limited in number and generally include teaching responsibilities as well as conducting responsibilites. These positions usually require a minimum of a master's degree in music and often a PhD.

Church choral directors often have other duties such as being the church organist and planning the musical parts of worship services.

There are a limited number of professional choral groups in Canada that offer full-time employment. Exceptional choral conductors are sometimes hired nationally or internationally as guest conductors for particular performances.

Many choral conductors who work with amateur groups must supplement their incomes by working in other occupations.

Salary

(section revised OCTOBER 2005)

Salaries for conductors of professional choirs, and for school choral directors vary depending on the individual's qualifications and experience. Church choir directors may be paid lower salaries or be volunteers. Community amateur choirs usually provide the conductor with an honorarium.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conductors, Composers and Arrangers occupational group working part-time or full-time earned an average salary of **$22,900 a year**.

Choreographer

Produced JULY 2003

Choreographers express ideas through movement. They design dances and create dance movement for professional dancers and dance companies, dance studios, amateur performing dance companies, musical theatre, opera, fashion shows, film, television productions and special events.

NOC Number(s): 5131.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I D S**

Duties

Choreographers translate stories, ideas and moods into dance movements. This may involve:

- expressing ideas through physical movements, patterns and formations
- experimenting with different dancers, dance steps and placements
- choosing the music, sound effects or spoken narrative to accompany the dance steps
- restaging existing works in a dance company's repertoire to give them a new interpretation
- choosing suitable dancers
- teaching dancers or other performers
- practising regularly to keep toned and in shape.

To communicate creatively through the human form, choreographers must take into consideration the limits to which dancers' bodies can be pushed. They often conduct rehearsals with performers to achieve desired interpretations of their work.

Choreographers use several different ways to record dance movements, each of which requires a technical understanding of the patterns and formations of choreography.

In small dance companies, choreographers may also be responsible for designing the set lighting effects and costumes. Other artistic elements (e.g. slides or film images) may also be incorporated into the dance production.

Working Conditions

Choreography is a very time consuming process that requires working long hours, including weekends and holidays. Rehearsals are particularly busy times for choreographers because they must spend time with artistic directors, theatre designers and the technical crew. Rehearsals usually take place during the day; performances are usually in the evening.

Personal Characteristics

Choreographers should have an interest in different musical styles and the ability to teach others how to interpret movements and moods. They should enjoy creating innovative dances, taking charge of situations and teaching others.

Educational Requirements

Professional choreographers almost always come from a **dancing background.** They are often trained in various styles of dance, from classical ballet to modern dance, and draw on all of these traditions in their interpretive creations. They should also be knowledgeable about historical costumes and human anatomy, have a background in production design and know how to read music.

There are no formal schools of choreography in Canada. However, most dance companies provide opportunities for experienced dancers to learn by working under the direction of skilled choreographic designers. Classes in choreography are part of most dance programs.

Dance training is available at colleges, universities, private dance schools and professional dance companies throughout Alberta. For more information, see the Dancer occupational profile.

Employment and Advancement

(section revised JANUARY 2006)

Professional choreographers usually work part-time as choreographers and work in other occupations such as dancer, dance teacher or movement coach as well. Some are the artistic directors of their own dance companies.

Choreographers usually work with professional dance companies. Full-time (resident) positions for choreographers are rare. In fact, dance companies often ask members of their dance troupe to create new works rather than contract a choreographer.

A choreographer may also be hired by organizers of special events such as:

- community festivals
- fashion shows
- half-time shows at sporting events
- entertainment at large spectacles such as the Olympic games
- television shows or music videos.

Opera companies and musical theatre productions may hire choreographers to train their actors in dance movements or to design dance sequences.

Choreographers are part of the larger National Occupational Classification 5131: Producers, Directors, Choreographers and Related Occupations. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Producers, Directors, Choreographers and Related Occupations group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since choreographers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for choreographers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Choreographers may receive royalties every time one of their choreographed pieces is performed and/or fees for choreographing works for special events. Fees are usually based on the choreographer's reputation and the length of the piece.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Producers, Directors, Choreographers and Related Occupations group working part-time or full-time earned from **$16,200 to $108,800 a year.** The average salary was **$46,800 a year.**

© Government of Alberta, Human Resources and Employment

Cinematographer

Produced MAY 2003

Cinematographers use camera, lighting and related equipment to create the desired visual mood or "feel" for a film or video production.

NOC Number(s): 5131.7
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D I O**

Duties

Cinematographers use lighting, lens selection, filtration, exposure and focus to create an image on motion picture film or videotape. When using motion picture cameras, results are delayed and not instantly visible. Cinematographers must rely on their knowledge and experience to anticipate the effect production decisions will have on the final image. Their primary responsibility is to define an appropriate "look " and determine how best to achieve it.

Depending on the size and scope of the project, cinematographers may be called "directors of photography" and direct the work of several assistants, or they may operate and set up camera and lighting equipment themselves. In general, however, cinematographers:

- control and create the photographic or electronic images for every second of film and video footage
- select the type of camera, lighting equipment, film, video camera menus, filters and lenses to be used
- adjust cameras for desired focus, exposure, composition and other settings
- control the transfer process in which film negatives are digitally transformed to video images for computer editing
- alter video camera menus to achieve the desired effect
- work closely with the director and other production crew members.

In some situations, cinematographers may also:

- attend production meetings and discuss lighting and camera needs with directors
- prepare and administer budgets.

Both film and high definition video are used as original mediums for documentaries, national commercials, feature films, movies of the week and television series productions.

Working Conditions

Cinematographers experience a variety of working conditions, depending on the type of production (e.g. documentary, television series) and where a film is being shot. For example, they may work "on location" in all kinds of weather, or indoors on a sound stage.

Hours of work also vary greatly. For example, cinematographers may have to photograph dawn over the foothills or twilight on a mountain lake. Those employed in motion pictures may work long hours (10 to 12 hour days) with short deadlines. Some travel is required when working in remote locations.

The work can be stressful when last minute changes are required.

Personal Characteristics

Cinematographers need the following characteristics:

- creativity and talent
- the ability to visualize finished product before its completion
- an appreciation of the composition and "feel" of visual images
- a willingness to put in long hours practicing their art, developing their own style and keeping up with

technological changes
- good communication skills
- good leadership skills
- the ability to learn by doing
- the ability to market their work and operate independently.

They should enjoy directing and co-ordinating camera and lighting work, finding innovative ways to do things, and working with equipment.

Educational Requirements

Cinematographers need a solid grounding in both the theoretical and technical aspects of the work. It is still possible to enter the field by gaining practical experience as a videographer or "stills" photographer, but this can take many years.

There are no post-secondary programs specifically in cinematography currently offered in Alberta. The following post-secondary institutions offer related programs.

- **Grant MacEwan College** in Edmonton offers a two year Digital Arts and Media diploma program. The entrance requirement is a high school diploma with at least 65 per cent in English 30 and Math 30, or equivalent, and successful completion of an accredited Introductory MacIntosh computer course or equivalent.
- **Mount Royal College** in Calgary offers a two year Broadcasting diploma program. Entrance requirements include a high school diploma or equivalent, keyboarding skills, a portfolio, testing and an interview.
- The **Northern Alberta Institute of Technology** in Edmonton offers a two year Radio and Television diploma program. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33 and at least 50 per cent in Grade 11 math, science and social studies (Grade 12 courses recommended).
- **Red Deer College** offers a one year post-diploma Motion Picture Arts, Advanced Certificate program and a Bachelor of Applied Motion Picture Arts degree program. The entrance requirement for both programs is two years of a post-secondary Theatre Studies Program, or equivalent, with a grade point average of at least 2.0/4. The entrance requirement for the Theatre Studies diploma program at Red Deer College is a high school diploma with English 30 or mature student status.
- The **Southern Alberta Institute of Technology** in Calgary offers a two year Cinema, Television, Stage and Radio diploma program with a specialization in film/video. The entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30 or 33. Typing skills are essential. A resume/portfolio, research paper and an interview may be required. SAIT also offers a two year Broadcast Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33 and Pure or Applied Math 30 or 33.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For information about Fine Art programs with specializations in photography, see the *Photographer* occupational profile.

The **Film and Video Arts Society** and the **Calgary Society of Independent Filmmakers** offer courses in cinematography on an as needed basis (see Other Sources of Information).

Employment and Advancement

(section revised JANUARY 2006)

Most cinematographers are self-employed artists who work on a contract basis for:

- production companies
- television studios
- advertising agencies
- independent film producers
- IATSE (International Alliance of Theatrical Stage Employees)
- anyone else interested in making films, videos, documentaries or advertising features (e.g. shooting independent music videos or local commercials).

To gain experience, aspiring cinematographers may work as lighting and grip technicians, camera assistants or camera operators, or volunteer to work on independent film or video productions or with local cable production companies. With experience, they may find work as camera assistants for established cinematographers. FAVA and CSIF act as resource centres for inexperienced cinematographers who wish to gain experience by volunteering for film projects.

Large production houses such as the Canadian Broadcasting Corporation or the National Film Board have a few cinematographers on staff full-time. However, most often, they contract work out to freelance cinematographers.

Cinematographers are part of the larger National Occupational Classification 5131: Producers, Directors, Choreographers and Related Occupations. In Alberta, most people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Producers, Directors, Choreographers and Related Occupations group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since cinematographers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for cinematographers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for cinematographers depend on talent and experience. Freelance cinematographers negotiate pay rates on a job-by-job basis. Those working within a union such as IATSE have wage guidelines set out in the union agreement.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Producers, Directors, Choreographers and Related Occupations group working part-time or full-time earned from **$16,200 to $108,800 a year.** The average salary was **$46,800 a year.**

Civil Engineer

Produced JUNE 2004

Civil engineers plan, design and supervise the construction, maintenance and decommissioning of a wide variety of public and private structures and facilities.

NOC Number(s): 2131
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I O D**

Duties

Civil engineers use traditional and high-tech tools (e.g. Intelligent Transportation Systems, Smart Systems, specialized materials) to solve problems and meet challenges such as pollution, traffic congestion, urban development, community planning, drinking water and energy needs. They examine and evaluate each project to find the most cost effective solutions to problems while still maintaining recognized standards. For example, they may plan and build:

- industrial buildings
- roadways, railways and bridges
- airports
- offshore drilling structures
- dams and reservoirs
- water and wastewater collection, management, treatment and distribution systems.

Civil engineers may specialize in any of the following branches of civil engineering.

Construction engineers plan and manage the construction of public and private buildings and facilities. In general, they:

- determine project requirements in terms of equipment, materials and human resources
- estimate costs and monitor expenditures
- apply their knowledge of various construction methods to the basic principles of planning, organizing, financing, managing and operating a construction project
- supervise technical support personnel, contractors and construction workers.

Geotechnical engineers provide the information on soil conditions required to design and construct foundations, underground structures, tunnels, embankments and dams. In general, they:

- analyze the properties of soil and rock that support foundations, pavements and underground facilities
- evaluate the potential settlement of buildings, the influence of slopes and landfills, and the effects of groundwater seepage, sliding, frost action, earth shifts and earthquakes
- design offshore drilling platforms and the foundations of high-rise buildings
- evaluate and design systems to eliminate or mitigate ground contamination
- design open pit mines and tailings dams.

Structural engineers usually work as part of a team that may include architects, mechanical and electrical engineers, construction contractors and project developers. In general, they:

- design load-bearing structures such as bridges, towers, offshore structures and buildings, keeping in mind the stresses that these structures must withstand
- carry out inspections at each stage of the building process to ensure adequate strength and rigidity, and analyze the structure's ability to withstand the effects of wind, snow, vibration and other forces
- check load and weight distribution requirements.

Transportation engineers plan and design systems for the safe and efficient movement of people and goods. They must have an understanding of the economic and social factors involved as well as engineering principles. Often working in conjunction with urban planners, transportation engineers:

- plan and design transportation systems such as highways, streets, railroads, airfields and mass transit systems
- provide advice on the operation and maintenance of all types of transportation facilities.

Water resource engineers design systems that collect, store and distribute water. In general, they:

- oversee the construction and maintenance of dams, reservoirs, hydroelectric power plants, canals and locks
- predict and analyze patterns of water-flow (run-off and flooding) and evaluate their potential effects
- design systems for the delivery of drinking water and collection and treatment of municipal waste and storm water
- design holding areas and storm sewers to accommodate water overflow and flooding conditions
- develop water systems designed to supply water to irrigation projects, prevent flooding, protect beaches and manage rivers.

For information about another specialization in civil engineering, see the Environmental Engineer occupational profile.

Working Conditions

Working environments for civil engineers are as varied as their projects. They may spend most of a working day at a computer workstation, on a project work site or in front of a public hearing. They usually work with a team that may include professionals from other engineering and scientific disciplines, contractors, project owners, architects, bankers, lawyers or government officials.

Civil engineers must constantly update their knowledge and skills to keep up with advancements in this rapidly changing field. They may be required to work long hours and experience a great deal of pressure to meet deadlines and design standards.

Personal Characteristics

Civil engineers need the following characteristics:

- good communication skills
- the ability to analyze data, review calculations and prepare cost estimates
- the ability to visualize three-dimensional objects from two-dimensional drawings
- the ability to think logically and solve problems
- a capacity for details.

They should enjoy being innovative, doing work that requires precision, making decisions and supervising people, and having variety in their work.

Educational Requirements

The basic educational requirement for working as a civil engineer is a **four year bachelor's degree in civil engineering**.

In Alberta, the following universities offer bachelor of science (B.Sc.) degrees in civil engineering:

- the **University of Alberta** in Edmonton
- the **University of Calgary**.

The minimum admission requirement for the engineering programs at both universities is a high school diploma with an overall average of 78 or 80 per cent in English 30, Pure Math 30, Math 31, Chemistry 30 and Physics 30.

A co-operative education or internship program, consisting of periods of academic study alternating with periods of planned work experience in industry, is available through the Faculties of Engineering at both the University of Alberta and the University of Calgary. These programs usually require about five years to complete.

Post-secondary institutions throughout the province offer university transfer programs which allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Civil engineers work in construction and related industries. They are employed by:

- municipal, provincial and federal government departments of transportation, public works or environment
- engineering consulting firms
- construction contractors
- property developers
- resource industries
- public utilities
- railroad companies
- manufacturing firms.

With experience, civil engineers can become project managers and eventually advance to the management of very large projects. Some experienced civil engineers establish their own construction or consulting companies. Those who have doctoral (PhD) degrees may teach at a university or conduct research.

In Alberta, over 75 per cent of people employed as civil engineers work in the following industries:

- **Professional and Technical Services**
- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 5,950 Albertans are employed in the Civil Engineers occupational group which is expected to grow 2.3 to 3.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 200 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Civil Engineers occupational group working part-time or full-time earned from **$22,900 to $152,900 a year.** The average salary was **$77,400 a year.**

© Government of Alberta, Human Resources and Employment

Civil Engineering Technologist

Produced JUNE 2004

Civil engineering technologists work with engineers, architects, surveyors and contractors in designing, developing and building civil engineering projects that are economical and functional and satisfy applicable standards and building codes.

NOC Number(s): 2231.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I M d**

Duties

Civil engineering projects include:

- roadways and highways
- water and wastewater treatment and distribution systems
- storm water drainage systems
- bridges
- buildings
- dams
- canals and drainage channels
- reservoirs
- railroads
- recreational facilities and parks
- landfills (solid waste facilities)
- landslide repairs
- erosion controls.

In general, civil engineering technologists:

- design and prepare drawings for structures to be built of timber, concrete or steel
- design and prepare construction drawings for highways, streets, urban subdivisions and water, sewer and storm water systems
- assist in planning and scheduling civil engineering projects
- prepare cost estimates and monitor project costs
- review shop drawings to ensure that they conform to design concepts
- conduct field surveys during various phases of design and construction
- inspect and supervise work at construction sites to ensure that safety and design specifications are followed and costs are contained
- monitor construction and prepare "as built" drawings
- analyze results and prepare statistical data, tables and drawings for traffic surveys and program traffic signals
- inspect water and wastewater treatment systems to ensure that pollution control requirements are met
- inspect dams, power plants, generating plants and other structures to assess the need for maintenance and repair work
- design culverts and open flow channels to facilitate water run-off
- conduct field and laboratory tests on soils, asphalt and concrete, assessing them according to specifications set by the Canadian Standards Association (CSA) and the American Society for Testing Materials (ASTM) tests
- install, read and interpret instrumentation (e.g. slope indicators, thermistors)
- develop concrete or asphalt mixes specially designed for specific uses and conditions
- interpret quality control tests and prepare technical reports
- manage projects (e.g. track and report progess, prepare invoices).

Specific job titles in this occupation vary depending on the particular aspect of civil engineering in which the technologist works. Typical titles include:

- building inspector
- civil engineering design technologist
- materials testing technologist
- traffic technologist
- construction co-ordinator, foreman or superintendant
- estimator
- technical representative.

Working Conditions

Civil engineering technologists work in offices and at construction sites. While in the office, technologists often work at a computer. At construction sites, they spend much of the day on their feet, inspecting construction work, sometimes in poor weather conditions. Part of the day may also be spent at an on-site office.

Civil engineering technologists usually work regular office hours but overtime may be required to meet completion deadlines. They often are expected to work away from home on major construction projects, sometimes in isolated locations.

Personal Characteristics

Civil engineering technologists need the following characteristics:

- strong mathematical and science skills (physics in particular)
- good oral and written communication skills
- excellent analytical and problem solving skills
- the ability to work independently.

They should enjoy doing work that requires taking a methodical approach, finding innovative solutions to problems and directing the work of others.

Educational Requirements

(section revised MAY 2005)

The basic requirement for working in this field is a **diploma in civil engineering technology**.

In Alberta, the following post-secondary institutions offer two year civil engineering technology diploma programs:

- **Lethbridge Community College**. The minimum admission requirement is a high school diploma with Pure Math 30 (or Math 30, or at least 65 per cent in Applied Math 30 or Math 33), one of: Physics 20 (recommended), Chemistry 20 or Science 20, and a basic understanding of computer technology.
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton. The minimum admission requirement is a high school diploma or equivalent with English 30 or 33, Math 30 (or at least 60 per cent in Math 33) and one of: Science 30, Physics 30 or Chemistry 30. An interest in and aptitude for applied sciences, especially those with a physics base, are definite assets.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary. The minimum admission requirement is a high school diploma or equivalent with English 30, Pure Math 30 or Math 30, and Science 30 or Physics 20. Students may be accepted with Math 33 and English 33. All students write placement tests in English, math and physics.

Graduates of these programs who wish to continue their studies may be granted some credit toward degree programs at specific Canadian universities.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Civil engineering technologists are employed by:

- construction companies
- engineering consulting firms
- manufacturing companies
- contractors
- land developers
- municipal and provincial public works, environment and transportation departments.

They may be employed full-time or on a contract basis, in rural or urban locations. Some work is seasonal.

Civil engineering technologists may work in the construction field as estimators, inspectors, supervisors or project managers. Some are employed as laboratory technologists testing construction materials and building products, or sales representatives for construction materials.

Civil engineering technologists are part of the larger National Occupational Classification 2230: Technical Occupations in Civil, Mechanical and Industrial Engineering. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Professional and Technical Services**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,200 Albertans are employed in the Civil Engineering Technologists and Technicians occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since civil engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for civil engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Civil Engineering Technologists and Technicians occupational group working part-time or full-time earned from **$27,600 to $106,500 a year.** The average salary was **$62,100 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

Coach

Produced MARCH 2005

Coaches recruit, train and instruct athletes to produce the best sports performances possible. Their job titles generally reflect their sport (e.g. hockey coach, baseball coach, swim coach, figure skating coach) or their position relative to others in an organization (e.g. head coach, club coach).

NOC Number(s): 5252.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D S M**

Duties

Coaches direct athletes' physical and mental training, conduct daily practices and develop strategies for competitions. Their duties and responsibilities vary considerably depending on the sport and level of competition. However, in general, coaches:

- help athletes identify and pursue realistic goals
- develop training plans
- teach skills, plays and tactics
- scout prospective athletes
- keep up with changing rules, techniques, technology and philosophies in their sport
- analyze athletes' performances and modify coaching programs accordingly
- ensure the safety of athletes at all times
- practice and teach high standards of sportsmanship and ethical conduct.

During the pre-season, coaches:

- arrange training camps or pre-season try-outs
- plan and direct fitness programs for the team and individual players
- plan and conduct practices
- analyze the strengths and weaknesses of their athletes and those of the competition (often through the use of videotapes and films)
- prepare play strategies based on their analyses
- assist in fund raising
- acquire equipment (if necessary)
- arrange schedules
- choose the team for the coming season.

During the season, coaches continue to direct fitness programs, conduct daily practices and analyze performance. They also:

- prepare for competition tours and events
- direct the game plan and tactics
- encourage, motivate and direct the team and individual athletes
- keep records of athlete, team and opposing team performance
- revise plans and strategies as needed
- meet with media representatives.

In the off-season, coaches may:

- do fund raising and public relations work
- review videos of past games and individual performances
- make plans for next season
- scout new players or athletes
- attend and give clinics.

In some sports, there is no off-season and coaches have year-round responsibilities.

Working Conditions

Coaching can be a rigorous, high-pressure, demanding occupation. Coaches often face criticism from the general public and media, particularly if their team or one of their athletes performs poorly. The stability of a coaching position often depends on the performance of the team or athlete and, in professional sports, on box office or gate receipts.

Coaches in paid positions often work long, irregular hours and travel extensively. They must work evenings, weekends and holidays when most games and competitions take place. Depending on the sport, they may be required to work indoors or outdoors, sometimes in adverse weather conditions.

Personal Characteristics

Coaches need the following characteristics:

- proven trustworthiness and high moral and ethical standards
- exceptional leadership ability including the ability to instill confidence and foster high standards of sportsmanship
- excellent communication and instructional skills
- good organizational skills.

In addition, they should be:

- physically fit and model an active lifestyle
- highly motivated
- patient
- creative as well as logical thinkers
- confident
- willing to do the work required to keep up to date.

They should enjoy observing and assessing athletes' skills, working with people and directing the work of others.

Educational Requirements

Coaches are often former athletes, especially at the professional level. Other qualification requirements vary from one sport to another and from one level of a sport to another.

Most sport organizations have a formal screening process for coaches. In general, the preferred qualification is NCCP certification (see below) combined with a bachelor's degree in physical education or kinesiology (for more information, see the Kinesiologist occupational profile). However, preferred qualifications vary considerably and prospective coaches are strongly advised to obtain more detailed information from the appropriate provincial sport association of national sport federation.

The **National Coaching Certification Program (NCCP)** is a five level education program that has theory, technical and practical components. Levels one to three provide basic principles of coaching, technical coaching skills and practical evaluation. Levels four and five are for those wanting to coach at the national and international levels.

Coaches of amateur teams (clubs, provincial, national or international) should be qualified through education and practical experience, and have achieved minimum NCCP Certification levels. Even unpaid volunteer coaches may be required to attend specific clinics to earn coaching certification.

Coaches of university or college teams are usually required to have a master's or doctoral (PhD) degree in physical education or kinesiology. Their responsibilities generally include teaching related post-secondary courses.

The **National Coaching Institute - Calgary**, a private vocational school, offers a 32 week National Coaching program leading to a Diploma in High Performance Coaching and NCCP Level 4 certification. Applicants must be high school graduates who are certified at NCCP Level 3. A degree in physical education is recommended.

Employment and Advancement

(section revised JANUARY 2006)

Most coaches are volunteers. Those in paid positions usually work on a contract basis for:

- professional sports teams
- provincial and national amateur sports teams
- post-secondary institutions
- school boards
- sport schools at the high school level
- recreational facilities
- sport clubs
- private athletic clubs.

Coaches may start out as assistant coaches before becoming head coaches. Some go on to become general managers of athletic teams. Others take on coaching and general manager responsibilities at the same time. Coaches also may become professional sport scouts, sport program directors or administrators in national sport federations.

If they have a related degree, coaches can become teachers, sport administrators or coaching consultants. Some coaches work in public relations and marketing.

In Alberta, over 75 per cent of people employed as coaches work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,400 Albertans are employed in the Coaches occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

The amount coaches in salaried positions are paid is usually based on years of experience and certification levels, and **varies greatly** among sports and levels within sports. Some volunteer coaches receive an honorarium.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Coaches occupational group working part-time or full-time earned from **$8,000 to $76,300 a year.** The average salary was **$29,700 a year.**

© Government of Alberta, Human Resources and Employment

Collection Agent

Produced NOVEMBER 2005

Collection agents use various strategies to collect money owed on past due accounts including letter writing, telephone calls and credit management.

NOC Number(s): 1435
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I s**

Duties

Collection agents are employed by businesses, financial institutions, governments and collection agencies to get payments from customers or clients who default on loans, credit card debts or other financial obligations.

Collection agents may have a variety of job titles such as:

- credit adjuster
- bill or claims collector
- collection clerk or officer
- recovery clerk or officer
- receivables control specialist
- accounts receivable analyst
- loan counsellor
- tax collector.

Small companies may hire part-time collection agents or assign the task of collection to a particular employee. Large companies usually hire a number of collection agents or contract a receivables management firm. For accounts that are difficult to collect, businesses may hire legal firms or contract private collection agencies.

Collection agents use tact and diplomacy when collecting overdue accounts to preserve a positive customer relationship with the business. They may use a variety of approaches such as:

- sending persuasive letters
- telephoning debtors or meeting with them to discuss overdue accounts
- arranging a repayment schedule based on the debtor's financial situation if the debtor cannot make a full payment
- using local directories, bureaus, registries and the Internet to locate people (sometimes called skip tracing).

They also may:

- keep records of payments manually or in a computer database
- prepare letters and statements of overdue accounts which are mailed out.

If debtors fail to respond to initial letters, collection agents usually follow up with other letters and phone calls. Most use three standard form letters:

- first a letter of reminder
- then a letter requesting contact
- finally a legal demand for payment.

Collection agents have access to computer databases and elaborate skip tracing methods for locating people who are difficult to find. Collection agencies are usually hired by businesses or organizations who have had no luck collecting on their own and are willing to pay a fee to get the money owed.

Collection agencies usually resolve about 40 per cent of their debts through phone calls and letters. Payments not collected by agencies may be written off and abandoned or, in some circumstances, legal proceedings may be instigated.

Working Conditions

Collection agents work in offices. They may sit for long periods of time working at a computer and using the telephone. Since agents often phone people at home, they may work Saturdays and start later in the morning and work into the evening. Dealing with unpleasant, upset debtors can be stressful.

Personal Characteristics

Collection agents need the following characteristics:

- the ability to negotiate with people courteously and effectively in difficult situations
- a high degree of motivation and initiative
- good communication skills in person and on paper
- the ability to work under stressful conditions, meet deadlines and not be offended by insults
- the flexibility required to respond effectively to the unexpected
- the ability to work in a team environment
- the ability to follow instructions and pay attention to details.

They should enjoy having clear rules and methods guiding their work, speaking with people in person or by telephone, and finding innovative ways to locate debtors and recover liabilities.

Educational Requirements

Most businesses and collection agencies prefer to hire collection clerks who have at least a high school diploma. Some companies hire university or college students to work part-time as collection agents.

Collection agents are usually given on-the-job training. They must become familiar with local and provincial regulations governing collection procedures and learn how to negotiate with debtors. They need:

- investigative skills to locate debtors and their assets
- financial analysis skills to determine a debtor's capacity to pay
- sales skills to persuade debtors to pay the money they owe.

Employment and Advancement

(section revised JANUARY 2006)

Collection agents are employed by many types of businesses including:

- retail and wholesale companies
- banks, credit card companies and other lending institutions
- hospitals
- insurance companies
- leasing firms
- property management companies
- trucking companies
- health clubs
- drilling, welding and other service suppliers
- utility companies
- municipal, provincial and federal governments
- collection agencies.

With experience, collection agents in large organizations may advance to legal collections or supervisory positions. In some financial institutions, collection agent is considered an entry level position from which employees may advance to other positions.

Collection agents are part of the larger National Occupational Classification 1435: Collectors. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,550 Albertans are employed in the Collectors occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Collection agents' earnings vary considerably depending on their duties and qualifications, and the type of employer. Those who work for hourly wages may earn from minimum wage to $25 an hour plus bonuses or commissions on the total dollars collected.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Collectors occupational group working part-time or full-time earned from **$19,900 to $106,500 a year.** The average salary was **$31,000 a year.**

College, Technical or Vocational Instructor

Produced NOVEMBER 2005

College, technical and vocational instructors provide instruction to adults in a wide variety of subject areas including vocational, technical, business or services training, trades, academic upgrading and university transfer courses.

NOC Number(s): 4131
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I D S

Duties

College, technical and vocation instructors teach adult students of all ages and academic backgrounds. Some students may have very little formal education; others may be experienced individuals seeking vocational upgrading or retraining.

Duties vary depending on the type and size of post-secondary institution, the subject area and the level of instruction. In general, however, instructors:

- develop curriculum
- research and prepare lessons
- use instructional techniques such as lectures, demonstrations, laboratory work, hands-on training, case studies, independent or group projects, field assignments, field placements and multimedia technologies (including online learning)
- provide individualized instruction and tutorial or remedial instruction
- prepare, administer and mark student exams
- evaluate student performance and assignments
- consult with students regarding specific academic or vocational concerns
- maintain and submit program or student records.

Instructors also must keep abreast of current developments and changes in their fields by maintaining contact with industrial or business sectors. Attending workshops, seminars and refresher courses is a necessary part of the job.

Some instructors have assistants who help prepare materials, set up laboratory and audio-visual equipment, gather research data, mark assignments and examinations, and perform other non-instructional duties.

College instructors may teach a broad range of courses, ranging from academic upgrading to applied degree programs, in fields such as:

- communications studies
- the arts
- the sciences
- community and health services
- business and computers
- technical, vocational and trades training
- general interest programs.

Instructional responsibilities and required qualifications vary with the programs taught. For example, instructors who teach university transfer programs generally have instructional responsibilities similar to those of lecturers who teach undergraduate programs at universities. Career certificate programs are usually taught by instructors who have industry experience in specific fields.

Technical institute instructors provide technically-oriented instruction to adult students involved in studies relating to:

- business (accounting management)
- commercial and service occupations
- engineering technologies

- medical and health sciences
- life resources
- media and information technologies
- mechanical, manufacturing and building sciences
- industrial and commercial trades (including apprenticeship courses).

Technical institutes provide technical in-school training for over 90 per cent of Alberta's apprentices as well as academic upgrading for students lacking the entrance requirements for further technical studies.

Vocational college instructors provide instruction in programs such as:

- basic literacy
- academic upgrading
- short, intensive vocational training programs relating to business, health, trades and service fields.

These programs are designed to give unemployed or under-employed adults the academic and employment skills they need to enter or re-enter the work force. Instructors may be teaching students who:

- come from culturally, socially or educationally disadvantaged backgrounds
- have decided to upgrade or retrain
- are new Canadians and require English proficiency (for more information, see the English as a Second Language Instructor - Adults occupational profile).

Working Conditions

Most college, technical and vocational instructors work in classroom, office and laboratory environments. Generally, facilities are well equipped and enrolments are limited in size.

Personal Characteristics

College, technical and vocational instructors need the following characteristics:

- good oral and written communication skills
- a desire to share knowledge with others and meet adult student needs
- enthusiasm for their subject or skill area
- respect for people from diverse backgrounds
- the ability to identify with students' aspirations and offer sound advice.

They should enjoy co-ordinating information in innovative ways to prepare teaching materials, supervising and evaluating student progress, and helping others achieve their goals.

Educational Requirements

Most college, technical and vocational instructors have related post-secondary education. Specific educational requirements vary depending on the position:

- College instructors usually have graduate degrees (master's or PhD degrees).
- Instructors responsible for teaching academic upgrading usually have at least a bachelor's degree. An Alberta teaching certificate or a certificate, diploma or degree in adult education are definite assets.
- Instructors of technical, trade or vocational programs should be experts in their particular fields. Instructors in technical institutions normally hold professional or technical certification and may be required to have a license for their particular field of expertise.
- Most instructors have extensive work experience as well as formal education qualifications.

Employers usually provide staff development programs about instructional methods and teacher-student relations for instructors who do not have formal teacher training.

In Alberta, the following post-secondary institutions offer programs specifically in adult education:

- **Mount Royal College** in Calgary offers a nine course Adult Educator Seminar Series program through Continuing Education. Applicants must be at least 18 years of age.
- At the **University of Alberta**, the Faculty of Education offers a two year Master of Education (M.Ed.) degree program in adult and higher education. The entrance requirements are successful related experience and a bachelor's degree with a grade point average (GPA) of at least 3.0/4 in the last two undergraduate years. The Faculty of Extension offers a part-time (250 hour) Adult and Continuing Education (CACE) program. A high school diploma is recommended but not required, and a maximum of 50 hours of advanced standing may be awarded for prior learning or for transfer credits.

- At the **University of Calgary**, the Centre for Distance Learning offers a two year M.Ed. degree program in adult, community and higher education. The entrance requirement is a suitable bachelor's degree with a GPA of 3.0/4 in the last two years of study and two years of related experience. The Faculty of Continuing Education offers a seven course Adult Learning program. Applicants are expected to have volunteer or professional experience as an adult educator.

Bachelor's degree programs in a variety of appropriate fields are offered by universities and colleges throughout Alberta. In general, the admission requirements for these programs include a high school diploma with a competitive average (ranging from 60 to 80 per cent) in English Language Arts 30-1 or English 30 and four other approved 30 level subjects. For specific requirements, please consult institution calendars or websites. For information about Bachelor of Education (B.Ed.) programs, see the Secondary School Teacher occupational profile.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of course work toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

College, technical and vocational instructors are employed in:

- public and private colleges
- private vocational schools
- institutes of technology
- religious colleges.

In all adult learning facilities, instructors with experience may advance to department or program head positions with increased supervisory and administrative duties. There are, however, relatively few administrative positions available compared to the number of classroom teaching positions.

College, technical and vocational instructors are part of the larger National Occupational Classification 4131: College and Other Vocational Instructors. In Alberta, over 75 per cent of people employed in this classification work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 11,150 Albertans are employed in the College and Other Vocational Instructors occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 170 to 290 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for instructors are usually based on a grid system that takes into account their years of related training and years of experience in the field. Positions are about equally divided between contract positions and sessional or permanent positions that offer benefits.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the College and Other Vocational Instructors occupational group working part-time or full-time earned from **$13,600 to $76,000 a year.** The average salary was **$48,200 a year.**

OCC info Alberta Occupational Profiles

Alberta Human Resources and Employment

Combined Laboratory and X-Ray Technologist

Produced FEBRUARY 2005

Combined laboratory and x-ray technologists conduct routine medical laboratory tests, perform radiography and electrocardiograms and set up, clean and maintain related equipment.

NOC Number(s): 3211.1, 3215.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M I O; O M i**

Duties

In general, combined laboratory and x-ray technologists:

- collect, prepare and analyze patient samples
- perform venipuncture (take blood from vein in arm) and capillary puncture (take blood from finger/heel in children)
- ensure quality control and lab safety while performing procedures in hematology, coagulation, urinalysis, clinical chemistry and point-of-care testing (e.g. glucose meter readings)
- explain radiography procedures to patients and answer questions
- monitor paitents
- correctly position patients and equipment
- operate diagnostic imaging equipment to produce quality images that assist in diagnosis
- recognize anatomical structures radiographed
- follow radiation protection practices, regulations and philosophy to reduce risk to patients, staff and visitors
- perform electrocardiograms and determine if tracings are technically accurate
- provide general patient care and transfer patients as needed
- perform administrative and clerical duties
- insure that equipment and instruments are working properly
- maintain equipment.

Combined laboratory and x-ray technologists work closely with other medical technologists, health record technicians, nurses, physicians and other health care professionals.

Working Conditions

Combined laboratory and x-ray technologists work primarily in rural hospitals and clinics. In hospitals, they work shifts and are sometimes on call. Safety precautions are required to avoid back strain and repetitive stress injuries, and reduce the risk of infection or injury when working with infectious patients, samples or hazardous chemicals.

This is a physically demanding occupation. Combined laboratory and x-ray technologists are on their feet for most of their shift. They may be required to help patients move and routinely handle equipment weighing up to 10 kilograms. If a patient is unconscious or otherwise unable to move, technologists ask other health care workers for help moving the patient.

Personal Characteristics

Combined laboratory and x-ray technologists need the following characteristics:

- a sense of responsibility and a high degree of integrity
- sensitivity to the needs of ill and injured people
- good health with no predisposition to back or leg problems
- excellent communication and interpersonal skills
- good organizational skills

- the ability to do detailed work and maintain a high level of accuracy
- good colour and form perception (to study blood cells, etc.)
- the ability to work independently as well as in a team environment.

They should enjoy compiling test results and patient data, setting up and operating sophisticated medical equipment, and working with the public and other health care professionals.

Educational Requirements

In Alberta, the **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Combined Laboratory and X-Ray Technology program. The program includes 34 weeks of clinical practicum at rural hospital sites throughout Alberta. The minimum entrance requirement is a high school diploma or equivalent with at least 60 per cent in English 30, Math 30 (or Pure Math 30), Chemistry 30, Biology 30. However, this is a quota program so higher marks are generally required to gain admission. A career investigation report is required.

NAIT also offers a one year Medical Laboratory Assisting certificate program. The entrance requirement is a high school diploma with at least 60 per cent in English 30 or 33, Math 30 or 33, Chemistry 30, Biology 30 plus keyboarding or a typing course at a Grade 10 level or equivalent.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For more information about programs in laboratory technology and x-ray technology, see the Medical Laboratory Technologist and Radiological Technologist occupational profiles.

Other Requirements

Under Alberta's Health Disciplines Act and Combined Laboratory X-Ray Technician Regulation, only registered members of the Alberta College of Combined Laboratory and X-Ray Technicians/Technologists (ACCLXT) may call themselves Registered Combined Laboratory X-Ray Technicians or Technologists. Registered members provide health services listed in the Regulation. Laboratory workers who are not registered (regulated) may perform laboratory activities.

Employment and Advancement

(section revised JANUARY 2006)

Most combined laboratory and x-ray technologists are employed in small, often rural, hospitals that have 15 to 60 beds. Some are employed in larger hospitals, health care centres, private or public clinics.

Combined laboratory and x-ray technologists work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

The occupation is expected to grow at an above average rate from 2005 to 2010 in Alberta.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the:

- Medical Laboratory Technologists and Pathologists' Assistants occupational group earned from **$25,200 to $54,800 a year.** The average salary was **$47,200 a year.**
- Radiological Technologists occupational group earned **up to $75,200 a year.** The average salary was **$53,100 a year**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Commercial Diver

Produced AUGUST 2005

Commercial divers work in underwater construction and salvage operations inland (in rivers, lakes, canals and open roadsteads) or offshore (in harbours and oceans). They may participate in search and recovery operations or marine research, or do inspection, maintenance and repair work related to offshore oil and gas production.

NOC Number(s): 7382
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Commercial divers work with specialized equipment such as diving helmets, underwater cutting torches, underwater welding equipment, wet-suits, dry-suits, hot water heated suits, hyperbaric chambers, full face masks and air compressors. They perform a wide variety of tasks under water:

- install and repair underwater pipelines which may involve laying pipes weighing up to 40 tons (lowered by crane off a barge) and cementing over small cracks in concrete pipes
- salvage wrecked ships and cargo which may involve using pneumatic and hydraulic tools and preparing and placing explosive charges
- inspect underwater structures which may involve using closed circuit television, still photography and non-destructive testing equipment as well as visual inspection
- repair underwater structures which may involve wet welding or dry habitat welding and the fabrication of jigs and supports
- perform oilfield work which may involve inspecting, maintaining and repairing drilling rigs and platforms, recovering subsea equipment and installing production systems (such as loading buoys and underwater pipelines)
- perform other marine construction work such as inspecting and repairing floating drydocks, breakwaters, piers and marine ways
- construct, repair and inspect dams
- inspect, clean and repair piping and valves in ponds, under cooling towers, and in power generating plants, refinery and chemical plants, and water storage facilities
- locate and recover submerged objects or bodies (sometimes under ice)
- work in contaminated environments such as sewage treatment facilities, taking bottom samples and inspecting and repairing underwater systems or facilities
- repair bridge foundations and maintain intakes and exhausts associated with power plants, municipal facilities or industrial plants.

Working Conditions

Divers involved in deep diving operations (over 165 feet) often use breathing mixtures other than air, live in hyperbaric chambers for up to a month and use diving bells, small manned submarines, atmospheric dive suits or other systems.

Commercial diving can be hazardous. Divers must observe safety precautions to avoid pressure-related injuries. Working underwater near heavy construction and oil drilling operations can present other types of dangers such as near zero visibility, waves, currents, intakes and exhausts, confined spaces and ice. Working in these kinds of environments can be stressful.

Divers may be required to lift items such as diving equipment that weigh over 25 kilograms.

Personal Characteristics

Commercial diving is mentally and physically demanding. Divers need the following characteristics:

- physical stamina
- emotional stability
- a strong mechanical aptitude
- the ability to work with written instructions and interpret blueprint information
- writing skills to report on findings and make recommendations
- organizational skills to prepare for dives
- a willingness to learn.

They should enjoy operating underwater equipment, solving problems by experimenting, and taking an organized, methodical approach to their work.

Educational Requirements

Divers need diving skills and a good understanding of the physical and physiological effects of pressure such as burst lung syndrome and decompression sickness. Because diving is essentially a way to get to work, they also need:

- other work-related skills (e.g. a background in welding, construction carpentry, mechanics, rigging or non-destructive testing)
- an understanding of the mechanics of hydraulics and compressed air
- the ability to adapt tools and fittings for underwater tasks.

The **Diver Certification Board of Canada (DCBC)** offers certification to offshore and inshore commercial divers who meet the requirements of the appropriate section of the Canadian Standards Association (CSA) Competency Standard for Diving Operations (CSA Standard Z275.4). CSA Standards Z275.1, Z275.2 and Z275.5 address hyperbaric facilities, occupational safety for diving operations and diver training. For a current list of accredited commercial diver training organizations in Canada, see the DCBC website.

Employment and Advancement

Diving equipment is very expensive so commercial divers often work for diving contractors who provide all the necessary equipment. They may specialize in work related to:

- police operations
- scientific research
- underwater/marine construction
- salvage and inspection
- off-shore oil and gas activities
- seafood harvesting
- aquaculture
- movie production.

Some divers are self-employed.

Advancement opportunities are limited. With additional training, divers may become dive supervisors, saturation technicians, inspectors, welders, medical technicians or diving consultants.

In Alberta, most people employed as commercial divers work in the following industries:

- **Construction**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Very few Albertans are employed in the Commercial Divers occupational group.

Salary

Factors such as membership in a union, ownership of the equipment being used, the depth of the dive and working hazards usually determine divers' pay scales. Therefore, incomes may vary widely from one diver to another and from one year to another.

Communication Technician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Communication technicians install, repair and maintain telecommunication systems.

NOC Number(s): 7246
Minimum Education: Apprenticeship Trade - Grade 12
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: O I M

Duties

In general, communications technicians install, maintain, remove or repair wiring networks, consumer communication equipment, switchboards and specialized equipment such as intercoms, fax machines, computer networks and electronic key systems. They also maintain and repair various types of microwave, television, toll and switching equipment used to provide local or long distance service.

Working Conditions

Working conditions vary greatly for communication technicians depending on the specific duties involved. Some work primarily outdoors, some primarily indoors. Overtime is required during emergencies. Shift work may also be required.

There is some risk of injury due to electrical shock or falling.

Personal Characteristics

Communication technicians need the following characteristics:

- mechanical ability
- analytical ability
- normal colour vision for working with colour-coded wiring
- good customer service skills
- the ability to keep up to date with changes in technology.

They should enjoy doing precison work which sometimes requires creativity.

Educational Requirements

Communication technicians must be:

- competent in the use of test instruments and understand their capabilities and limitations
- familiar with different circuit configurations and components
- capable of using test procedures to locate faults and isolate defective components.

To work in Alberta, communication technicians must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 12 education with Math 30 or 33, Pure Math 30 or Applied Math 30 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Courses in math and physics are particularly important.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- the Northern Alberta Institute of Technology (NAIT) in Edmonton and by mobile delivery (check with NAIT for delivery location)
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Any apprentice currently registered in the **Communication Electrician-Construction branch** must contact Alberta Apprenticeship and Industry Training for the technical training requirements.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Telecommunications Engineering Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, one of Physics 30, Chemistry 30 or Science 30 and Pure Math 30 or successful completion of Transitional Mathematics 101 or at least 65 per cent in Algebra 35.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Telecommunications Technology diploma program. The entrance requirement is a high school diploma with Pure Math 30 or Math 30, English 30 or 33, English Language Arts 30-1 or 30-2 and a minimum 20 level science.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Communication technicians are employed by:

- telecommunication companies such as Telus, Northwestel and Unitel Telecommunications
- smaller companies that install, maintain, sell, rent or lease communications equipment, subcontract for the larger telecommunications companies, or install private communications systems.

Experienced communication technicians may advance to supervisory positions, change to other craft areas or retrain and transfer to other departments such as sales or engineering. Alberta certified journeyman communication technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Communication technicians are part of the larger National Occupational Classification 7246: Telecommunications Installation and Repair Workers. In Alberta, over 75 per cent of people employed in this classification work in the **Information, Culture and Recreation** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,800 Albertans are employed in the Telecommunications Installation and Repair Workers occupational group which is expected to grow 0.4 to 1.4 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since communication technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for communication technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice communication technicians earn at least 40 per cent of the journeyman wage rate in their place of employment in the first year, 50 per cent in the second, 60 per cent in the third and 75 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$17 to $23 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Telecommunications Installation and Repair Workers occupational group working part-time or full-time earned from **$21,400 to $63,100 a year.** The average salary was **$40,200 a year.**

Community Health Nurse

Produced SEPTEMBER 2004

Community health nurses provide professional nursing services for individuals, families, communities and groups in a variety of settings.

NOC Number(s): 3152.3
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **D M D**

Duties

Community health nurses' duties vary considerably from one job to another and may vary from one assignment to another in the same job. In general, they:

- develop and deliver health promotion and education programs
- facilitate the development of support groups and community solutions to local health problems
- deliver preventive programs such as immunization or screening programs for tuberculosis or breast cancer
- visit and provide health care services to new mothers, elderly patients and others needing care in their homes
- supervise and assist in the ongoing education of personal care attendants and other care givers
- assist in the control of communicable disease outbreaks
- ensure continuity of care as clients move from one part of the health care system to another
- provide health support and counselling services for people in crisis and help them access appropriate resources
- assist in the development of public health policies.

Community health nurses may work with a wide variety of people or specific groups in the community. For example, they may work primarily with:

- children (newborns, preschool, school age, adolescents)
- children who have long term disabilities
- families
- elderly people in good health
- elderly people whose ability to function independently is diminishing
- disadvantaged individuals or groups
- community organizations (schools, churches, housing and social service agencies)
- clients needing care following discharge from hospital
- palliative patients who have chosen to die at home
- individuals who have mental health problems.

Working Conditions

Community health nurses counsel and advise clients over the telephone and may travel to see clients in their homes. Most work weekday hours. However, evening and weekend work is often required.

Community health nurses face the same occupational hazards as other nurses (exposure to infectious diseases and chemicals, back injuries and muscle strains from moving patients). They also must work relatively independently and deal with issues of personal safety because they work outside the controlled environment of a hospital. Those who work in isolated communities may be the only health professionals who live in the community.

Personal Characteristics

Community health nurses need the following characteristics:

- flexibility and adaptability
- physical and emotional stamina

- good communication skills and a sense of humour
- problem-solving and critical thinking skills
- the ability to work independently as well as in a team environment
- the ability to work well with individuals, families and groups from diverse social and cultural backgrounds
- the ability to motivate people
- the ability to react quickly and effectively to unexpected or unusual situations
- the ability to supervise para-professional and non-professional staff.

They should enjoy advising individuals and groups about promoting and maintaining good health, taking a methodical approach to compiling information and administering treatments, and directing the work of others.

Educational Requirements

In Alberta, registered nurse status requires a **diploma or bachelor's degree in nursing**. The following post-secondary insitutions offer approved nursing education programs:

- **Athabasca University**
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **Keyano College** in Fort McMurray
- **Lethbridge Community College**
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **Red Deer College**
- **University of Alberta** in Edmonton
- **University of Calgary**
- **University of Lethbridge**.

These schools offer collaborative programs to enable students to graduate with a bachelor's degree in nursing. Degree programs may allow students to exit at the diploma level.

Admission requirements vary but generally include a high school diploma with an overall average of at least 60 or 65 per cent in:

- English 30
- Biology 30
- Chemistry 30 (some institutions will accept Science 30)
- Math 30 or Pure Math 30 (some institutions will accept Math 31, Physics 30, or at least 60 per cent in Math 33 or Applied Math 30)
- a fifth 30-level course (Social Studies 30 or a 30-level language recommended).

Admission to quota programs is competitive so higher marks may be required to gain admission. For current information on programs and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

Other Requirements

(section revised OCTOBER 2004)

Under the current legislation governing registered nurses in Alberta, the Nursing Profession Act and associated regulations, only registered members of the Alberta Association of Registered Nurses (AARN) may call themselves or practice as a Registered Nurse.

Employment and Advancement

(section revised JANUARY 2006)

Community health nurses are employed by regional health authorities, organizations such as the Victorian Order of Nurses (VON), charitable organizations and churches, and businesses that provide services related to health care. Some self-employed community health nurses work on a contract basis.

Advancement for community health nurses may take the form of specializing in a particular type of health care service (e.g. palliative care, health education, communicable disease control, genetic counselling, teen sexual health, community development) or in serving the needs of a particular client population (e.g. seniors, school children).

Community health nurses are part of the larger National Occupational Classification 3152: Registered Nurses. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 27,150 Albertans are employed in the Registered Nurses occupational group which is expected to grow 3.3 to 4.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that over 600 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since community health nurses form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for community health nurses.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for community health nurses vary considerably depending on the employer, location and the nurse's hours, qualifications and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Registered Nurses occupational group working part-time or full-time earned from **$15,700 to $75,500 a year.** The average salary was **$51,800 a year.**

2004 salaries for registered nurses who work full-time (1921 hours a year) and are members of United Nurses of Alberta start at $50,580 per year.

Community Health Representative

Produced APRIL 2005

Community health representatives promote wellness, the protection of health and the prevention of injury and illness in community settings.

NOC Number(s): 4212
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M I

Duties

Community health representatives work with others in health care teams to improve and maintain the spiritual, physical, intellectual, social and emotional well being of individuals, families and their communities. They provide services in one or more of the following areas:

- health promotion and injury prevention
- client and community advocacy
- environmental (public) health
- cultural liaison.

CHRs involved in health promotion and injury prevention:

- organize health education workshops
- design or help create culturally appropriate education resources
- conduct home visits to build relationships with community members and provide information and support
- provide health promotion and injury prevention services such as prenatal classes, elders' luncheons or health fairs
- help prevent and control the spread of communicable diseases (e.g. immunization promotion, outbreak management)
- conduct screening programs
- monitor clients who have chronic diseases.

CHRs involved in client and community advocacy:

- conduct home and hospital visits
- refer clients and families to appropriate resources and services, and help them overcome any access barriers
- recommend improvements regarding the delivery of health care
- act as a liaison and collaborate with community leaders, agencies and service providers
- help implement and evaluate community health plans
- co-ordinate or facilitate community health initiatives.

CHRs who work in First Nations:

- monitor the safety of the community's water supply
- provide information about personal hygiene, safe food handling, safe water quality and waste disposal
- participate in the investigation of communicable disease outbreaks and provide information, screening and follow-up
- participate in housing inspections, emergency preparedness and disaster planning, and planning and monitoring special events (e.g. PowWows, rodeos).

CHRs involved in cultural liaison may translate language and describe routine medical processes and procedures for clients, or interpret cultural practices or beliefs for health care professionals.

In all areas, CHRs must document their activities. For example, they record observations in client health records, complete water bacterial reports, prepare monthly reports and participate in the development of community health workplans.

In urban settings, community health representatives generally do not provide services that are already provided by other health care professionals (e.g. assessing, screening, montioring water safety).

In isolated communities, community health representatives provide temporary emergency care, consult with health care professionals regarding emergency situations or escort patients to the appropriate health care facilities.

Working Conditions

Community health representatives work in homes and community facilities including schools and health care centres, primarily in First Nations communities and Metis settlements. They generally work standard office hours but may be required to respond to emergency situations or attend evening or weekend meetings.

The work can be stressful in emergency situations and when people have conflicting expectations.

Personal Characteristics

Community health representatives need the following characteristics:

- good physical and mental health
- emotional maturity
- an interest in community work, particularly the preventative and educational aspects of health care
- good oral and written communication skills
- the ability to relate well to people of all ages, individually and in groups
- the ability to work with little supervision
- the ability to keep client information confidential.

They should enjoy helping people in the community, gathering information and maintaining records, and implementing innovative health programs.

Educational Requirements

(section revised NOVEMBER 2005)

Community health representatives must have related post-secondary education and a valid driver's license.

In Alberta, the following post-secondary institutions offer directly related education programs:

- **Kevano College** in Edmonton/St. Alberta offers a one year Community Wellness Worker certificate program. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 (or English 30) or at least 60 per cent in ELA 30-2 (or English 33).
- **Portage College** in Lac La Biche offers a 36 week Community Health Representative certificate program. The program includes 24 weeks of instruction and 12 weeks of field work at the student's local health unit or centre. The entrance requirement is Grade 12 or equivalent. All applicants must participate in an admissions interview, complete a basic admissions test, have up-to-date immunizations, submit an approved fieldwork letter, and have a valid Alberta driver's license. Graduates receive 30 credits towards the Bachelor of Professional Arts - Human Services at Athabasca University.

For current information about the program and mature student admission policies, please check the Portage College calendar or website.

Employment and Advancement

(section revised JANUARY 2006)

Most community health representatives are employed by First Nations bands or regional health authorities, primarily in smaller communities. A few are employed in urban areas by community agencies or regional health authorities.

With additional education, community health representatives may move into related occupations. For example, graduates of the Community Health Representative program are eligible for preferred entry into Nechi Institute addictions counselling programs (for more information, see the Addictions Counsellor occupational profile).

Community health representatives are part of the larger National Occupational Classification 4212: Community and Social Service Workers. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)

- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 9,600 Albertans are employed in the Community and Social Service Workers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 160 to 260 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since community health representatives form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for community health representatives.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Community and Social Service Workers occupational group working part-time or full-time earned from **$14,100 to $104,900 a year**. The average salary was **$27,800 a year**.

Salaries vary from one community and employer to another but, in general, community health representatives earn about **$28,000 per year (2005 estimate)**.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Composer

Produced MAY 2003

Composers create and write a wide variety of original music (e.g. symphonies, operas, ballet scores, musical theatre scores, jazz or rock pieces). They also write music for commercial mediums, including advertising jingles and film soundtracks.

NOC Number(s): 5132.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M d**

Duties

Composers often develop a unique style of their own. They may, however, produce music in another style or be commissioned to compose music for a special occasion (e.g. a live dance performance, a new symphony or a film/television soundtrack). Further, their pieces vary in length and difficulty, ranging from lengthy film scores and symphonies to short, 30-second jingles for radio commercials.

Writing film and television scores involves spending time studying the film, and possibly the script, to see how and where the music will best fit in to create the desired effect or mood. Increasingly, composers are using computers and synthesizers to produce professional music scores, to orchestrate and to create new arrangements.

Working Conditions

Most of the time, composers work alone. Their working environments and hours of work vary considerably. They may work closely with others (e.g. arrangers, orchestrators, copyists) to complete final scores, or with performers in rehearsals and recording sessions. Film and television composers work with producers or directors to define the nature and placement of the music.

Personal Characteristics

Composers need the following characteristics:

- musical talent and creativity
- tremendous determination and perseverance (getting one's music published or performed can be a long process).

They should enjoy inventing melodic, harmonic and rhythmic structures to express ideas and emotions, and playing musical instruments.

Educational Requirements

(section revised JANUARY 2006)

To succeed, composers must:

- be able to play at least one musical instrument
- understand the range, sound and capability of a variety of instruments
- understand how music is put together harmonically, melodically, rhythmically and textually
- be able to blend various instrumental sounds together to produce desired harmonies or to create special effects
- be able to use musical notation to express their ideas.

Most composers start their musical training at an early age. In addition to playing one or more instruments (usually the piano or a string instrument), they must have an extensive knowledge of music theory. Some composers also study other languages, such as Italian, French or German that are used in classical music.

For composers of concert music, developing a unique style is crucial. This requires listening to as much music as possible, studying musical scores from various musical styles, experimenting and gaining experience.

Post-secondary education in music provides excellent training and exposure to different musical styles. Most serious composers pursue further studies at a university or music conservatory. Some apprentice with a recognized, accomplished composer as part of their post-graduate training.

Popular music (e.g. country, rock) composers often do not have extensive formal training (for related information, see the Songwriter occupational profile). They may study alone, at a music conservatory or a college, or with other accomplished musicians.

In Alberta, the following post-secondary institutions offer music programs:

- **Alliance University College** in Calgary offers a four year BA in Music. The entrance requirement is five senior matriculation level courses including English and math with an minimum overall average of 60 per cent.
- **Banff Centre for the Arts** offers intensive workshops with world-class musicians and conductors. Applicants must submit a portfolio, project description and resume. An audition tape may be required. The entrance requirement is five senior matriculation level courses including English and math with an minimum overall average of 60 per cent.
- **Canadian Nazarene University College** in Calgary offers a three and four year BA in Music. The entrance requirement is a high school diploma with a minimum average of at least 60 per cent in five Grade 12 subjects including English, and math or a second language.
- **Canadian University College** in College Heights offers a three and four year BA in Music. The entrance requirement is a high school diploma with English 30 and at least three other 30-level courses.
- **Concordia University College of Alberta** in Edmonton offers a three year degree program in Music. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate Grade 12 subjects.
- **Gardner College - A Centre for Christian Studies** in Camrose offers a two year Music Performance diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33.
- **Grande Prairie Regional College** offers a two year Music Acoustic diploma program. The entrance requirement is a high school diploma with English 30, Music 30 and Grade 2 conservatory music theory (or equivalent). A placement exam and an audition are required.
- **Grant MacEwan College** in Edmonton offers a two year Music diploma program with specializations in performance, recording arts and writing. The emphasis in this program is on jazz and commercial music. The entrance requirement is a high school diploma or equivalent.
- **Keyano College** in Fort McMurray offers one year certificate and two year diploma programs in Music. The entrance requirement is a high school diploma with English 30 or 33 and an audition.
- **The King's University College** in Edmonton offers three and four year degree programs in Music. The entrance requirement is an average of at least 60 per cent in English 30 and four other appropriate Grade 12 subjects.
- **Mount Royal College** in Calgary offers a two year Music Performance diploma program with specializations in orchestral instruments and vocal music. The entrance requirements are a high school diploma or equivalent, performance skills equivalent to Grade 10 Conservatory, an audition and a placement test in music theory, history and keyboard.
- **Red Deer College** offers a two year Music diploma program. The entrance requirements are a high school diploma with English 30 or 33, an audition and an examination.
- **University of Alberta** in Edmonton offers four year degree programs and five year combined degree programs in Music. The entrance requirement for the Bachelor of Music program, which has a specialization in composition, is a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: a 30-level language other than English, a second 30-level language other than English, Biology 30, Chemistry 30, Physics 30, Math 30, Pure Math 30, Math 31, Science 30, one approved Fine Arts subject. An audition, music rudiments exam and aural skills exam are required. The University of Alberta in Camrose also offers bachelor degree programs in music.
- **University of Calgary** offers a four year degree program with a specialization in composition. The entrance requirements are a high school diploma with an average of at least 72 per cent in English 30 and four of the following subjects: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a 30-level language other than English, Music 30 or one five credit Grade 12 subjects. An audition and interview are also required.
- **University of Lethbridge** offers four year degree programs and five year combined degree programs with a specialization in theory (including composition). The entrance requirement are an average of at least 65 per cent in English 30 and three other appropriate 30-level subjects plus a fifth Grade 12 subject, an appropriate music background and an audition.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Few composers earn a living from composition alone. Many work in related areas to supplement their incomes:

- performing or accompanying soloists
- teaching privately or in colleges or universities
- arranging or orchestrating scores.

Composers may be commissioned to write a piece of music by a major arts organization or a provincial arts funding source. There is considerable competition for available grants and commissions.

Music publishers may be interested in listing new pieces of original music in their catalogues. However, many Canadian composers have begun publishing their own works to retain control over publishing and distribution. Some composers use the services of music agents to negotiate contracts and agreements.

Composers are part of the larger National Occupational Classification 5132: Conductors, Composers and Arrangers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 300 Albertans are employed in the Conductors, Composers and Arrangers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since composers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for composers.)

Salary

(section revised OCTOBER 2005)

Composers often negotiate their fees directly with their employers. Fees vary widely and are not necessarily based on experience.

The Canadian League of Composers pays a flat "per minute" rate to composers of commissioned works. The reputation and talent of the composer determines what the fee will be when long pieces of music are commissioned.

Composers are paid royalties from performances of their music. Royalties are collected and distributed by the Society of Composers, Authors and Music Publishers of Canada.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conductors, Composers and Arrangers occupational group working part-time or full-time earned an average salary of **$22,900 a year**.

Computer and Network Operator

Produced JULY 2004

Computer and network operators establish, operate, maintain and support the use of local area networks (LANs), wide area networks (WANs), mainframe networks and related hardware, software and peripheral equipment.

NOC Number(s): 2281.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M d

Duties

Computer networks range in size and design from a simple link between two personal computers in the same building to massive networks that link computers of varying capabilities all over the world.

Duties and responsibilities vary from one job to another, depending on the size and nature of the network. However, in general, computer and network operators:

- maintain, troubleshoot and administer networks, computer workstations and peripheral equipment (e.g. printers)
- evaluate and install computer hardware, networking software and operating system software
- configure and maintain switching and routing equipment
- operate master consoles to monitor the performance of computer systems and networks and to co-ordinate use of a network
- load computer tapes and disks and install software and printer paper and forms
- diagnose hardware and related software problems and replace defective components
- implement data, software and hardware security procedures (e.g. ensure secure connections and safeguard against denial-of-service attacks)
- oversee the installation of copper, optic fiber and wireless network media
- perform routine network startup and shut down procedures and maintain control records
- perform data backups and disaster recovery operations.

Computer technology changes so rapidly that computer and network operators are constantly assessing the suitability of new products and changing network components. To keep up to date with new developments, they share information via e-mail, use web-based resources, attend technical training courses and conferences, and read computer-related journals, magazines and newsletters.

Working Conditions

Computer and network operators may work in environmentally-controlled computer rooms and offices. They may work standard office hours or be required to work 8 to 12 hour shifts, evenings, nights and weekends. Some light lifting (up to 10 kilograms) is required.

Personal Characteristics

Computer and network operators need the following characteristics:

- the ability to think logically and analyze complex problems
- the ability to express ideas in clear, understandable terms and communicate effectively with vendors, co-workers and network users
- the ability to work efficiently under pressure
- the ability to get along well with network users and remain calm in stressful circumstances
- a keen interest in keeping up to date with technological developments.

They should enjoy analyzing information and solving problems, taking a methodical approach to tasks requiring precision, and consulting with others.

Educational Requirements

(section revised NOVEMBER 2005)

Computer and network operators are usually graduates of post-secondary programs related to computer science or training programs offered by network software vendors. Some employers require job applicants to have certification or training for a specific type of network environment (e.g. Cisco Certified Network Associate, Microsoft Certified Systems Expert). Prospective computer and network operators are strongly advised to discuss their training options with potential employers before enrolling in a training program.

In Alberta, many universities, colleges, technical institutes and private vocational schools offer post-secondary programs related to computer science and information technology. For a list, see the Computer Programmer occupational profile. The following institutions offer programs specifically related to network administration or technology:

- **Academy of Learning**, a private vocational school in Airdrie, Calgary, Edmonton, High River, Lethbridge, Medicine Hat and Red Deer
- **Alberta Career Computer Center**, a private vocational school in Edmonton
- **Bow Valley College** in Calgary
- **CDI College of Business and Technology**, a private vocational school in Calgary and Edmonton
- **Columbia College**, a private vocational school in Calgary
- **DeVry Institute of Technology**, a private vocational school in Calgary
- **Grant MacEwan College** in Edmonton
- **Lakeland College** in Lloydminster
- **Lethbridge Community College**
- **Medicine Hat College**
- **Mount Royal College** in Calgary through Continuing Education
- **NorQuest College** in Edmonton
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Prestwick College**, a private vocational school in Calgary
- **Red Deer College**
- **Southern Alberta Institute of Technology (SAIT)** in Calgary
- **Trend College** a private vocational school in Edmonton.

Admission requirements vary but generally include a high school diploma or equivalent with English 30 or 33 and Pure Math 30 or Applied Math 30 or mature student status. Admission to some programs is competitive and requires additional courses such as Physics 20 or a 30-level science.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Computer and network operators are employed by medium to large corporations, government departments and consulting firms. Some are self-employed consultants.

Advancement opportunities depend on the size of the organization and the employee's qualifications. Experienced computer and network operators may move into a related occupation such as web technician or, with additional training, become computer programmers, interactive media developers or web designers.

Computer and network operators are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta

- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,900 Albertans are employed in the Computer and Network Operators and Web Technicians occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 80 to 130 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since computer and network operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for computer and network operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Computer and Network Operators occupational group working part-time or full-time earned from **$19,600 to $125,300 a year.** The average salary was **$42,600 a year.**

Computer Engineer

Produced JULY 2004

Computer engineers design, implement, evaluate, modify, maintain and test computer systems and related equipment.

NOC Number(s): 2147.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Computer engineers design, develop and test computer hardware and support peripherals including central processing units (CPUs), support logic, microprocessors, custom integrated circuits, field-programmable gate arrays and peripherals such as printers and disc drives. In some cases, they develop special purpose embedded products that use computer technology as part of a larger project. For example, embedded computers are used in applications ranging from washing machine controls to automobile engines. This often requires low-level or high-level software coding.

Computer engineers are responsible for:

- analyzing product and client requirements
- developing design specifications including performance expectations and materials to be used
- assembling, adapting and testing existing pieces of equipment for a specialized function
- building prototypes (working models) of a product including the development of logic and digital circuit designs
- testing and modifying the prototype prior to large-scale manufacturing.

They may also be responsible for:

- analyzing the needs of the user and recommending appropriate hardware
- providing a cost analysis and obtaining quotes from suppliers
- developing system specifications
- analyzing operating problems and making modifications
- determining system performance standards
- writing product documentation
- selling computer technology
- modifying existing hardware and software to meet specialized needs
- preparing proposals for software and hardware systems.

Computer engineers must constantly update their knowledge and skills to keep up with rapid advancements in computer technology. They often work as members of design teams that may include a project engineer, senior engineers, software engineers, technologists, technicians and marketing and manufacturing specialists.

Working Conditions

Computer engineers spend most of their time in an office or laboratory environment working with computers, testing equipment and documenting systems. They may work considerable overtime and experience a great deal of pressure to meet deadlines. Some lifting may be required during the course of their work (between 5 and 25 kilograms) as well as climbing and bending.

Personal Characteristics

Computer engineers need the following characteristics:

- excellent oral and written communication skills
- inquiring and inventive minds
- a capacity for details

- patience and a systematic approach to trouble-shooting
- good decision-making and problem-solving skills
- an aptitude for mathematics and science
- the ability to teach others
- good time management skills.

They should enjoy being innovative, working both with others and on their own, and doing work that requires precision.

Educational Requirements

Computer engineers must have **a four year degree in computer engineering or a related discipline** such as electrical engineering. Some employers hire only computer engineers who have a master's degree in electrical engineering. A doctoral degree in engineering is generally required for a career in teaching or research.

The **University of Alberta** in Edmonton and the **University of Calgary** offer four year bachelor of science degree programs and advanced degree programs in computer and electrical engineering. The minimum admission requirement for the bachelor's degree program is a high school diploma with an average of 78 or 80 per cent in the following Grade 12 subjects:

- English 30
- Pure Math 30
- Math 31
- Chemistry 30
- Physics 30.

There are student admission quotas for the Faculties of Engineering at both institutions. Programming experience at the high school level is an asset. The first year of studies is a common year of study for all engineering disciplines. Students specialize in computer engineering in the second, third and fourth years.

Both universities offer co-operative education programs in engineering consisting of periods of academic study alternating with periods of planned work experience in industry. Students in the co-operative program usually take five years to complete the requirements of the degree.

Post-secondary institutions throughout the province offer university transfer programs which allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Computer engineers are employed in almost any industry in which computers are used. In particular, they are employed by companies involved in:

- telecommunications
- computer manufacturing
- consulting
- hardware research and development
- consumer electronics
- industrial instrumentation and process control.

Working for smaller companies requires a broader range of skills; duties with larger companies may be more specialized. Computer engineers are also employed by governments and hospitals.

With experience, computer engineers may establish their own businesses, move into marketing or other areas of

engineering, or advance to supervisory positions and management positions. Training or experience in business administration is an asset.

In Alberta, over 75 per cent of people employed as computer engineers work in the following industries:

- **Professional and Technical Services**
- **Other Manufacturing**
- **Information, Culture and Recreation**
- **Oil and Gas Extraction**
- **Public Administration**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,250 Albertans are employed in the Computer Engineers occupational group (except Software Engineers) which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Computer Engineers (Except Software Engineers) occupational group ranged from **$22,800 to $77,500 a year.** The average salary was **$76,700 per year**.

© Government of Alberta, Human Resources and Employment

Computer Programmer

Produced JULY 2004

Computer programmers create, modify and test the forms, scripts and code that tell computers what to do.

NOC Number(s): 2174.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I M D

Duties

Computer programmers may combine and adapt existing programs or program components, or actually write computer code. They use application design and development tools, and different computer and database languages for different types of applications (e.g. business, commercial, engineering or scientific software).

In general, computer programmers:

- work from specifications drawn up by systems analysts or discuss requirements with people who will be using the program
- analyze requirements to determine what steps need to be taken and in what order, and translate these steps into computer language commands
- test programs and software applications to see if they work and debug them (find and correct errors)
- document programs and procedures by writing descriptions of what the programs do and how they do it, by preparing user manuals or help screens and by updating case repositories
- maintain existing computer programs by making minor modifications, as required.

Working Conditions

Computer programmers work in an office environment. Overtime may be required to meet deadlines or to debug programs that are not running properly.

Personal Characteristics

Programmers need the ability to:

- think logically and concentrate for long periods of time
- change abruptly from using abstract logic to dealing with masses of program details
- remain patient and persistent when debugging programs
- pay attention to details to avoid time-consuming and costly errors
- communicate ideas clearly
- get along well with clients and other team members.

They should enjoy learning new computer languages and programming styles, and developing innovative solutions to problems.

Educational Requirements

(section revised NOVEMBER 2005)

Most computer programmers have completed a post-secondary education program in computer science or a related discipline that has a significant programming component. There are a wide variety of three and four year degree programs, two year diploma programs and one year certificate programs in this field that are offered by universities, colleges, technical institutes and private vocational schools.

Before enrolling in an education/training program, prospective programmers should:

- decide what type of programming work they want to do (and in which industry)

- talk to potential employers about required and preferred qualifications for that type of programming.

After graduation, all programmers must continuously upgrade their knowledge in this rapidly changing field.

In Alberta, the following post-secondary education institutions offer programs directly related to computer programming:

- **Academy of Learning**, a private vocational school in Airdrie, Calgary, Edmonton, High River, Lethbridge, Medicine Hat and Red Deer
- **Alberta Career Computer Centre**, a private vocational school in Edmonton
- **Athabasca University** (distance education program)
- **Bow Valley College** in Calgary
- **CDI College of Business and Technology**, a private vocational school in Calgary and Edmonton
- **Concordia University College of Alberta** in Edmonton
- **DeVry Institute of Technology**, a private vocational school in Calgary
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **Keyano College** in Fort McMurray
- **The King's University College** in Edmonton
- **Lakeland College** in Lloydminster
- **Lethbridge Community College**
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Prestwick College**, a private vocational school in Calgary
- **Red Deer College**
- **Southern Alberta Institute of Technology (SAIT)** in Calgary
- **Sprott-Shaw Community College**, a private vocational school in Calgary
- the **University of Alberta** in Edmonton and Camrose
- the **University of Calgary**
- the **University of Lethbridge**.

In general, the admission requirement for the university programs (other than Athabasca University) is a high school diploma or equivalent with an acceptable average (ranging from 60 to 80 per cent depending on the program) in English 30, Pure Math 30 and three other approved 30-level subjects (Math 31 and Physics 30 recommended). Admission to college and technical institute programs generally requires a high school diploma or equivalent with English 30 and Pure Math 30 (or a minimum average in English 33 and Applied Math 30) or equivalent.

Continuing education programs are often offered on an as needed basis.

For current information on programs and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Computer programmers are employed by large software companies and consulting firms, many of which are based outside Alberta. Most programmers employed in Alberta work in the information systems departments of large organizations or in small specialized software development firms. Employers include:

- consulting firms
- software developers
- insurance, oil, transportation and utility companies
- municipal, provincial and federal governments
- educational and financial institutions.

Some programmers are involved in research and scientific work for universities, research foundations and computer design and manufacturing companies. Some work as consultants, developing programs for companies with specific software needs. A small percentage are employed as programming instructors in colleges and institutes of technology.

Junior programmers require two or three years of experience and additional training to become applications or systems programmers. Experienced programmers may become lead applications programmers or systems analysts. With additional training and experience, programmers may move into related fields such as database administration, systems security or network design.

In Alberta, over 75 per cent of people employed as computer programmers work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 11,300 Albertans are employed in the Computer Programmers and Interactive Media Developers occupational group which is expected to grow 2.3 to 3.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 380 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since computer programmers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for computer programmers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised JANUARY 2006)

Salaries for computer programmers depend on the education and experience of the programmer, and the size, location and type of employer.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Computer Programmers occupational group working part-time or full-time earned from **$20,600 to $124,400 a year.** The average salary was **$52,000 a year.**

Computer Service Technician

Produced SEPTEMBER 2004

Computer service technicians install, service and configure computer systems and networks including desktop computers, servers and peripherals such as printers, disk drives and CD-ROM drives.

NOC Number(s): 2242
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Computer service technicians' duties and responsibilities vary from one position to another but, in general, they:

- inspect and connect new equipment
- configure systems and install/update systems and applications software
- install, configure and troubleshoot Internet connections
- connect computers to wired and wireless local area networks
- test new systems to ensure that they are in working order
- respond to customer complaints and provide technical advice
- diagnose and troubleshoot hardware and related software problems
- remove viruses from infected machines
- install circuit boards and peripherals
- keep records of maintenance work and repairs
- analyze customer equipment performance records.

Working with customer support analysts, computer service technicians may field test new equipment and report the results to engineering and manufacturing personnel.

Working Conditions

Computer service technicians work in surroundings that may vary from clean and well-ventilated to cold and dusty. They may be required to lift and carry computer components weighing up to 40 kilograms.

A 40-hour work week is standard but technicians may be on 24-hour call for specified periods and work overtime when systems malfunction. The work can be stressful when systems are not working properly and customers are upset.

Personal Characteristics

Computer service technicians need the following characteristics:

- good communication and interpersonal skills for dealing with customers in problem situations
- mechanical aptitude and the ability to think logically
- an aptitude for and interest in math and science
- good problem-solving skills
- the ability to work alone and with others.

They should enjoy using instruments and equipment to perform tasks requiring precision, taking a methodical approach to gathering information and assisting technologists and engineers.

Educational Requirements

(section revised DECEMBER 2005)

The **minimum** education requirement for computer service technicians is **a high school diploma plus related training or experience.** Employers generally prefer to hire job applicants who have related post-secondary education and A+ certification (see below). Advancement may require a related two year diploma or equivalent (for information about two year programs, see the Computer and Network Operator, Computer Programmer and Customer Support Analyst occupational profiles).

There are a variety of post-secondary education programs offered in this field. Prospective students are advised to talk to potential employers about program suitability and reputation before choosing a program of study.

In Alberta, the following institutions offer related technical programs that are **less than one year** in length:

- **Academy of Learning**, private vocational schools in Airdrie, Calgary, Edmonton, High River, Medicine Hat and Red Deer offer a 46- or 51-week PC Support Specialist program. The entrance requirement is a high school diploma with a Grade 12 English and a Grade 10 math, or equivalent.
- **Alberta Career Computer Center**, a private vocational school in Edmonton, offers a 19 week Computer Service Professional program and a 44-week Systems Support Technology program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math or equivalent.
- **Bow Valley College** in Calgary offers a 32-week Computer Technician certificate program that includes five weeks of work experience. The entrance requirement is a high school diploma with English 20 or 33 and Applied Math 30 or equivalent.
- **Columbia College**, a private vocational school in Calgary, offers full-time (25 weeks) and part-time (50 weeks) Information Technologies Specialist programs and a full-time (24 weeks) and part-time (48 weeks) Information Technologies Technician programs. The entrance requirement is a high school diploma with at least 60 per cent in Grade 12 English and math, or equivalent.
- **DeVry Institute of Technology**, a private vocational school in Calgary, offers a 45-week Electronics and Network Technology Diploma program. The entrance requirement is a high school diploma or equivalent.
- **Grande Prairie Regional College** offers a one year certificate program in Computer Systems Technology. The entrance requirement is a high school diploma with Pure Math 30 and English 30 or equivalent.
- **HCC Computer Training Centre and Career College**, a private vocational school in Spruce Grove, offers a 25-week Hardware/Software Support program. The entrance requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math, or equivalent.
- **Lakeland College** in Lloydminster offers a one year Computer Technology Certificate program. The entrance requirement is a high school diploma preferably with English 30 and Pure Math 30.
- **Medicine Hat College** offers a one year certificate program in Information Technology. The entrance requirement is English 30 (or 60 per cent in English 33) and Math 30 (or 65 per cent in Math 20 or 33).
- **NorQuest College** offers a 25-week Microsoft Certified Systems Expert, A+ certificate program that includes eight weeks of work experience. The entrance requirements include a skills appraisal test in English and Math, an admission interview, and familiarity with DOS and Windows.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Electronic Service Technician program. The entrance requirement is a high school diploma with English 30 or 33 and Pure or Applied Math 30.
- **Northern Lakes College** in Grouard and Slave Lake offers a 40-week Computer Technician certificate program. Applicants must have English 33 and Math 23 (or pass an entrance exam), typing speed of at least 20 words per minute and previous experience with computers.
- **Prestwick College**, a private vocational school in Calgary offers a 47-week Certified Solutions Professional program. The entrance requirement is a high school diploma or equivalent, admission interview and two letters of reference.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs may be offered on an as needed basis.

Many employers provide ongoing training opportunities, both in the classroom and on the job, to help computer service technicians keep up to date with rapidly changing technology.

Other Requirements

The Alberta Society of Engineering Technologists (ASET) offers certification for graduates of recognized education programs who have two years of successful experience in industry. The designations CET (Certified Engineering Technologist) and C. Tech. (Certified Technician) can be used only by members of ASET and other provincial associations within the Canadian Council of Technicians and Technologists (CCTT).

Employment and Advancement

(section revised JANUARY 2006)

Computer service technicians are employed by computer manufacturers, computer consulting firms, computer sales and service firms and large organizations such as government departments and major corporations.

Experienced computer service technicians may advance to supervisory or management positions. Those who have advanced training may become technical specialists who assist engineers in designing equipment.

Computer service technicians are part of the much larger National Occupational Classification 2242: Electronic Service Technicians (Household and Business Equipment). In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Management, Administrative and Other Support Services**
- **Repair, Maintenance, Personal and Other Services**
- **Retail Trade**
- **Wholesale Trade**
- **Educational Services**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,650 Albertans are employed in the Electronic Service Technicians (Household and Business Equipment) occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 200 to 310 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since computer service technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for computer service technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for computer service technicians **vary considerably** depending on the employer and the employee's qualifications and responsibilities.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electronic Service Technicians (Household and Business Equipment) occupational group working part-time or full-time earned from **$14,200 to $81,100 a year.** The average salary was **$44,200 a year.**

© Government of Alberta, Human Resources and Employment

Concrete Finisher

Produced FEBRUARY 2006

Concrete finishers place and finish concrete floors, driveways, sidewalks, curbs, bridge decks and other concrete structures.

NOC Number(s): 7282
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M i**

Duties

Duties vary from one position to another but, in general, concrete finishers:

- place wet concrete into the forms and spread it to a specified depth
- level and smooth the surface, round the edges and make joints or grooves to help control cracking on the surface
- apply architectural, exposed, patterned or stamped, broomed and smooth finishes on concrete surfaces

They also repair, waterproof and restore concrete surfaces.

Working Conditions

Concrete finishers work both outdoors and indoors at tasks that are fast-paced and strenuous. Travel may be required to get to construction sites.

Outdoor work can be affected by adverse weather conditions, so there is usually less work available in the winter. Summer hours are often longer than the standard 40-hour week. Overtime is sometimes required because concrete finishers cannot leave a project in the middle and return to it the next day.

There is some risk of injury due to uneven footing and from other construction-site hazards. The work also involves considerable bending, stooping and kneeling.

Concrete finishers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Concrete finishers need the following characteristics:

- physical strength and stamina
- the ability to get along well with other workers.

They should enjoy physical exercise and working with their hands.

Educational Requirements

Concrete finishers must know how to use dry pack grouting and epoxy materials, and understand how to cure concrete perfectly.

To work in Alberta, concrete finishers must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high

school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,200 hours of on-the-job training and four weeks of technical training in the first and second year and a minimum of 1,200 hours of on-the-job training in the third. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Concrete finisher apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered by the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Most concrete finishers are employed by general contractors involved in building highways, bridges and large buildings and by contractors who do only concrete work. A few concrete finishers are self-employed, contracting their services for smaller projects such as patios, sidewalks and driveways.

Experienced concrete finishers may specialize in a particular type of work, advance to supervisory positions or become contract estimators. Alberta certified journeyman concrete finishers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, most people employed as concrete finishers work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Concrete Finishers occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice concrete finishers are paid at least 65 per cent of the journeyman wage rate in their place of employment in the first year, 75 per cent in the second and 85 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$16 to $23 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Concrete Finishers occupational group working part-time or full-time earned from **$31,300 to $83,300 a year.** The average salary was **$55,000 a year.**

© Government of Alberta, Human Resources and Employment

Conservation Officer

Produced JANUARY 2006

Conservation officers manage resources, visitor services, maintenance and recreation in provincial parks and educate the public about related issues.

NOC Number(s): 2224
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M S**

Duties

Conservation officers work directly with the public in provincial parks. Their ojectives are to:

- safeguard people while they are visiting parks
- minimize conflict between park visitors
- protect the natural resources of the park.

Duties vary from one position to another but, in general, conservation officers:

- offer information and assistance to park visitors
- monitor and manage resources
- co-ordinate forest fire suppression activities
- supervise and train park employees
- respond to correspondence, complete reports and prepare budgets
- investigate violations and ensure compliance with resource-related laws and regulations
- conduct search and rescue operations as needed
- inform policy makers and wildlife investigators
- make presentations and conduct public outreach activities
- contribute to park management and operational plans
- co-operate with wildlife researchers in development management and enforcement strategies
- supervise the construction or repair of facilities and maintenance of equipment.

Conservation officers frequently patrol their areas by truck, boat or plane, or on foot, skis or horseback. They watch for potential hazards and assess the condition of the park, its wildlife and other natural resources.

Conservation officers are trained in first aid and life-saving techniques and must take charge of the situation when visitors are lost, injured or endangered. They work in co-operation with police, fish and wildlife officers, and other resource management and enforcement agencies.

Working Conditions

Conservation officers work indoors and outdoors, sometimes in extreme weather conditions or rough terrain. Travel is required, sometimes by unusual modes of transport such as canoe, snowmobile or horseback. Some risk is involved in capturing and handling animals and enforcing regulations.

Hours of work include weekends and holidays, and may include night shifts or split shifts. Overtime may be required to respond to violations or events involving serious conflict between humans and wildlife.

Lifting up to 10 kilograms is routinely required; heavier lifting may be required in some circumstances.

Personal Characteristics

Conservation officers need the following characteristics:

- tact, diplomacy and excellent interpersonal skills
- an interest in nature and concern for the environment

- good health and physical conditioning
- good oral and written communication skills
- the ability to remain calm in stressful situations
- excellent problem solving skills.

They should enjoy conducting patrols, compiling information and working with people.

Educational Requirements

The minimum education requirement for conservation officers is a related four year bachelor's degree. Computer skills are a definite asset.

Science degree programs are offered by post-secondary institutions throughout Alberta. The following institutions offer four year Conservation or Environmental Science programs:

- **Concordia University College of Alberta** in Edmonton offers a Bachelor of Science degree program in Environmental Science. The entrance requirement is a 60 per cent average in English Language Arts 30-1 (or English 30), Pure Math 30, Biology 30, Chemistry 30 and one other appropriate 30 level subject.
- **The King's University College** in Edmonton offers Bachelor of Arts and Bachelor of Science degree programs in Environmental Studies. The entrance requirement is a 60 per cent average in five approved 30 level courses including English Language Arts 30-1 (or English 30), Pure Math 30 and Biology 30 or Chemistry 30 (both are recommended).
- **Lakeland College** in Vermilion offers a post-diploma Bachelor of Applied Environmental Management degree program. The entrance requirement is successful completion of an approved two year diploma program. Suitable diploma programs are offered by Lakeland College, Keyano College, the Northern Alberta Institute of Technology, Olds College and some institutions outside Alberta.
- **Lethbridge Community College** offers a Bachelor of Applied Conservation Enforcement program. The entrance requirement is a high school diploma with a 60 per cent average in English Language Arts 30-1 (or English 30), Pure or Applied Math 30, Biology 30, Chemistry 20 and Social Studies 30. Medicine Hat College also offers the first year of this program.
- The **University of Alberta** in Edmonton offers a Bachelor of Science degree program in Environmental and Conservation Sciences. The entrance requirement is a high school diploma with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Biology 30, Chemistry 30 and one other approved Grade 12 subject. The University of Alberta also offers a combined degree program in Environmental and Conservation Sciences/Native Studies.
- The **University of Calgary** offers a Bachelor of Science degree program in Environmental Science. The entrance requirement is a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30, Chemistry 30, one of the following: Biology 30, Physics 30 or Math 31 (Biology 30 is required for the Biological Sciences concentration), and another approved 30 level subject (Math 31 recommended).
- The **University of Lethbridge** offers a Bachelor of Science degree program in Environmental Science. The entrance requirement is a 65 per cent average in English Language Arts 30-1 (or English 30), Pure Math 30 (or equivalent), Biology 30, Chemistry 30 and one other approved Grade 12 subject. An approved diploma is required for post-diploma admission.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Prospective students should consult practicing conservation officers regarding program and course selection.

Employment and Advancement

Conservation officers are employed by the **Government of Alberta**. They may be posted or transferred to any provincial park in Alberta and most officers are transferred at least once during their first few years of employment. Some positions are seasonal.

Experienced conservation officers may specialize in a particular type of work or advance to supervisory positions.

Conservation officers are part of the larger National Occupational Classification 2224: Conservation and Fishery Officers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Forestry and Logging**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)

- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Conservation and Fishery Officers occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since conservation officers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for conservation officers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conservation and Fishery Officers occupational group working part-time or full-time earned from **$35,900 to $55,700 a year.** The average salary was **$51,400 a year.**

Conservator

Produced MAY 2003

Conservators plan, co-ordinate and participate in the preservation and conservation of cultural property (contemporary, historic, prehistoric and enthnographic objects, natural history specimens, archival materials and works of art) and study environmental influences on artifact preservation.

NOC Number(s): 5112.1
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D i m**

Duties

Conservators work with a wide variety of objects, including:

- clothing and textiles (e.g. historic clothes, household linens, quilts)
- furniture
- musical instruments
- ceramic and glass objects
- metals (e.g. antique cars, silverware)
- taxidermy specimens
- ethnographic materials (e.g. native hide garments)
- archeological materials
- video and audio tapes
- gravestones
- architecture (e.g. forts, grain elevators)
- industrial artifacts
- paintings
- works of art on paper
- sculpture
- photographs
- books and archival materials.

They usually specialize in particular types of objects but, in general, conservators:

- advise curators and archivists regarding the condition of artifacts, archival materials and works of art, possible treatments and options for long-term care
- take preventive conservation measures such as ensuring that the storage environment is stable and protects objects from environmental hazards
- advise curators, archivists, educators and designers concerning environmental needs and suitability for exhibit, storage, loan or travel
- perform analytical tests and technical examinations to determine suitable storage and conservation requirements and treatments
- draft policies and administer procedures to prevent damage which can be caused by excess light, fluctuations in temperature and humidity, dust particles, air pollution, infestation or human handling
- conserve and restore artifacts, archival materials and works of art by using their scientific knowledge and aesthetic sensibility as well as analytical methods (e.g. polarized light, microscopy, chemical analysis) and manual and artistic skills
- maintain written, electronic and photographic records of the condition of artifacts, treatment options and any treatment carried out
- monitor collection storage areas, galleries, reference rooms, libraries and laboratories for pests
- direct and supervise the activities of conservation assistants, technicians and interns
- prepare progress, technical and other reports

- research and evaluate new conservation and restoration techniques (e.g. new cleaning methods for paintings or wood consolidation) and make them available to the museum community.

Working Conditions

Conservators may use, examine and treat a wide variety of materials, including toxic chemicals, and must follow safety precautions to avoid injury. Other occupational hazards include health problems related to repetitive hand movements and neck/back strain.

Personal Characteristics

Conservators need the following characteristics:

- creativity and flexibility
- the ability to concentrate for long periods
- manual dexterity
- perceptual and problem-solving skills
- an active interest in art, science and history and respect for the objects in their care
- a willingness to keep up to date with new conservation techniques
- the ability to work as part of a team.

They should enjoy doing precise work, finding solutions to problems and taking a methodical approach to their work.

Educational Requirements

Conservators must have skills and knowledge in general museum practices and operations, chemistry and another subject area such as:

- art history
- anthropology
- archaeology
- clothing/textile history
- textile science
- studio art/design
- photography
- biology or another science.

They also need creative and manual skills in fields such as painting, photography, sewing, cabinet making or silversmithing, plus internship training in established conservation laboratories and studios.

Related post-secondary education programs are offered throughout Alberta. In particular, the **University of Alberta** in Edmonton offers a four year Bachelor of Science (B.Sc.) degree program in Human Ecology which can include courses in textile conservation and a museum internship. The entrance requirement is an average of at least 70 per cent in English 30, Pure Math 30, Biology 30 or Chemistry 30 and two other 30-level subjects. The University of Alberta also offers a master's degree programs in Textiles and Clothing with a specialization in conservation.

The **University of Calgary** offers Bachelor of Arts, B.Sc. and Bachelor of General Studies degree programs with a minor in Museum and Heritage Studies through the Faculty of Communication and Culture. The entrance requirement is a high school diploma with an average of at least 72 per cent in English 30; one of Pure Math 30, Applied Math 30 or Math 31; and three of Biology 30, Chemistry 30, Physics 30, Social Studies 30, Science 30, a language 30 other than English, or one five credit Grade 12 subject.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Outside of Alberta, the following Canadian institutions offer post-secondary programs directly related to conservation work:

- **Algonquin College of Applied Arts and Technology** in Ottawa offers a three year museum studies program.
- **Queen's University** in Kingston offers a two year master's degree program in Art Conservation with specializations in paintings, artifacts, paper objects and research.
- **Sir Sandford Fleming College** in Peterborough offers a four semester Collections Conservation and Management diploma program.

- The **University of Victoria** Department of History in Art offers a post-graduate Cultural Resource Management diploma with specializations in museum studies and heritage conservation. Many courses are offered through distance education as well as on campus.

The **Canadian Conservation Institute** in Ottawa may offer internship opportunities for practicing conservators and conservation students.

Employment and Advancement

(section revised JANUARY 2006)

Conservators work for:

- federal government departments (e.g. the National Archives of Canada, National Museums, Indian and Northern Affairs Canada, Parks Canada, and the Canadian Conservation Institute)
- provincial government departments such as Alberta Community Development
- museums, art galleries, universities, archives, libraries and historical societies
- research organizations
- other organizations whose mandate is the preservation of cultural property.

Most conservators work on a contract basis. They may have several projects or part-time jobs at the same time. For example, they may do research and conservation work for a museum and consulting work for a historical society as well as teach or write articles.

Conservators are part of the larger National Occupational Classification 5112: Conservators and Curators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 200 Albertans are employed in the Conservators and Curators occupational group which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since conservators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for conservators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conservators and Curators occupational group working part-time or full-time earned from **$15,000 to $67,100 a year.** The average salary was **$59,100 a year.**

Construction Craft Labourer

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Construction craft labourers prepare and clean up construction sites, move materials and equipment and perform demolition, excavation and compaction activities.

NOC Number(s): 7611
Minimum Education: Designated Occupation - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O i**

Duties

Construction craft labourers work on a wide variety of buildings, structures and premises, including municipal sewer and water mains, roads, dams, bridges, tunnels, railways and canals. Their duties and responsibilities vary from one job to another but, in general, they:

- handle and distribute construction materials (e.g. load and unload vehicles with supplies, equipment and construction materials; move tools, equipment and construction materials to and from work areas; remove rubble and other debris)
- excavate, backfill and compact subgrade (e.g. move and level earth using shovels and rakes, operate pneumatic tampers)
- place, consolidate and protect case-in-place concrete or masonry structures (e.g. shovel cement and other materials into cement mixers; mix, pour and spread concrete; use electric and pneumatic vibrators)
- install municipal sewer and water mains (e.g. dig trenches using shovels and other hand tools, align pipes and perform related activities)
- assemble and dismantle scaffolding, ramps, catwalks, shoring and barricades at construction sites.

Construction craft labourers may also:

- drill and blast rock at construction sites
- demolish buildings
- sort, clean and pile salvaged materials from demolished buildings
- operate jackhammers and drills to break up concrete or pavement.

Working Conditions

Construction craft labourers work outdoors in all weather conditions. Overtime is routinely required during peak construction periods. Since there is some risk of injury when working on contruction sites, labourers must wear personal protective equipment (hardhats, gloves and steel-toed boots) and follow safety programs and legislation.

Construction craft labourers may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Construction craft labourers need the following characteristics:

- physical strength and stamina
- manual dexterity
- a safety-conscious attitude
- the ability to work with others in a team.

They should enjoy being physically active, working outdoors and using hand and power tools.

Educational Requirements

Construction craft labourer is a **designated occupation** in Alberta. This means that training and certification are not required but trainees can apply to **Alberta Apprenticeship and Industry Training** for an Alberta Occupational Certificate.

To **register,** trainees must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire a trainee. Most employers prefer to hire high school graduates and/or people who already have related training or experience.

The **term of training** for the construction craft labourer program is a minimum of 12 months that include at least 2,000 hours of work experience.

Applicants who have related training or experience may qualify for credit or certification.

Employment and Advancement

Construction craft labourers are employed by a variety of contractors and road builders in the construction industry, as well as larger companies that have ongoing construction requirements. They may be laid off during the winter months.

Experienced construction craft labourers may advance to supervisory or foreman positions. Certified Alberta construction craft labourers who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Construction craft labourers are part of the larger National Occupational Classification 7611: Construction Trades Helpers and Labourers. In Alberta, most people employed in this classification work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 16,450 Albertans are employed in the Construction Trades Helpers and Labourers occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 240 to 410 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since construction craft labourers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for construction craft labourers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the Alberta Occupational Training Committee for this designated occupation, experienced construction craft labourers earn from **$10 to $22 an hour plus benefits** (2003 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Construction Trades Helpers and Labourers occupational group working part-time or full-time earned from **$15,600 to $85,900 a year.** The average salary was **$39,000 a year.**

OCC*info* Alberta Occupational Profiles

Alberta Human Resources and Employment

Cook

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Cooks prepare food in public and private eating establishments including hotels, restaurants, institutions, trains and ships.

NOC Number(s): 6242
Minimum Education: Apprenticeship Trade - Grade 9
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O d**

Duties

Depending on the establishment, cooks can be employed at various tasks. However, their major responsibilities fall under three categories: nutrition, food costs and sanitation.

In general, cooks:

- study menus to estimate food requirements and obtain the necessary food from storage or from suppliers
- wash, peel and cut vegetables
- clean and cut meats, fish and poultry
- clean kitchen equipment and cooking utensils
- prepare, season and cook foods such as soups, salads, meat, fish, gravies, vegetables, desserts, sauces and casseroles
- carve meats, prepare portions on a plate and add gravies, sauces and garnish to servings
- bake pastries
- prepare buffets (e.g. platters, showpieces)
- prepare special diets
- oversee menu planning, regulate stock control and supervise kitchen staff.

Working Conditions

Cooks are often required to work shifts including weekends and holidays. They work under pressure and the work volume can be considerable. There is some risk of injury due to burns and cuts.

Cooks may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Cooks need the following characteristics:

- be fluent in English with reading and writing competency
- have good basic math skills
- have a genuine interest in preparing food
- be in good health and have stamina
- have a keen sense of taste and smell
- be flexible
- the ability to work as members of a team
- the ability to maintain the high standard of cleanliness necessary in any food establishment.

They should enjoy the job's creative challenges and the public's appreciation for their expertise.

Educational Requirements

To work in Alberta, cooks must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have at least an Alberta Grade 9 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **term of apprenticeship** is three years (three 12-month periods) that include a minimum of 1,560 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Cook apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at:

- Lethbridge Community College
- the Northern Alberta Institute of Technology (NAIT) in Edmonton
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Weekly apprenticeship training (WATS) is also offered by Lethbridge Community College and Red Deer College.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **Lethbridge Community College** offers a Culinary Careers diploma program. The entrance requirement is a minimum of 60 high school credits with at least 60 per cent in Applied Math 20 and Language Arts 20B or equivalent.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year certificate and a two year Culinary Arts diploma program. The entrance requirement is Grade 10 or equivalent with English and math. NAIT also offers a 60-hour Culinary Kitchen Skills Series program.
- **Portage College** in Lac La Biche offers a 32-week Culinary Arts certificate program. The entrance requirement is Grade 9 or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a 56-week Professional Cooking diploma program. The entrance requirement is at least 35 high school credits with Pure Math 10 or Applied Math 10 or Math 13 and English Language Arts 10-1 or 10-2, English 10 or 13, or Humanities 10 or equivalent. A resume is required.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Cooks are employed in hotels, clubs, restaurants, catering firms, cafeterias, institutions, homes, high-class specialty food outlets and isolated bases and camps. There are also good prospects for travel both within Canada and abroad.

Experienced cooks can advance through promotions with the same employer or by moving to more advanced positions with other employers. They can become:

- sous-chefs, chefs or executive chefs (for more information, see the Chef occupational profile)
- banquet managers (for more information, see the Banquet Manager occupational profile)
- food service administrators and coordinators (for more information, see the Food Service Supervisor and Food and Nutrition Manager occupational profiles)
- general managers or food editors.

Experienced cooks can become a Certified Chef de Cuisine (CCC), a highly respected trade level of certification.

Alberta certified journeyman cooks who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

In Alberta, over 75 per cent of people employed as cooks work in the **Accommodation and Food Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the Accommodation and Food Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 20,700 Albertans are employed in the Cooks occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 280 to 500 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice cooks earn at least 60 per cent of the journeyman wage rate in their place of employment in the first year, 75 per cent in the second and 85 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$9 to $12 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Cooks occupational group working part-time or full-time earned from **$10,800 to $68,900 a year.** The average salary was **$19,300 a year.**

© Government of Alberta, Human Resources and Employment

Correctional Officer

Produced APRIL 2003

Correctional officers are responsible for the supervision, control and custody of offenders who have been sentenced or of people awaiting trial in a court of law.

NOC Number(s): 6462
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M D s**

Duties

Correctional officers' duties vary depending on the security classification of the correctional institution and the types of programs offered. In general, correctional officers:

- ensure security at all times within the institution
- observe the conduct and behaviour of inmates to prevent disturbances and escapes
- prepare discipline reports and case reports on inmates in their units
- conduct security searches, including searching inmates and inspecting cells, vehicles and buildings.

They may also:

- drive passenger vehicles and trucks involved in transporting inmates to other institutions, courtrooms, hospitals and work sites
- assist in the management of individual cases or writing reports for the National Parole Board.

Correctional officers are expected to act as role models for offenders in the development of positive behaviour and attitudes. Some work with young offenders in young offender institutions and some work at minimum security work camps.

Working Conditions

Correctional officers work both indoors and outdoors and are on their feet most of the time. Shift work is required. The work can be stressful and hazardous because correctional officers must always be on the alert for potential outbreaks of violence.

Personal Characteristics

Correctional officers need the following characteristics:

- responsible and mature
- in good physical condition and able to restrain offenders when required
- good oral communication skills for co-ordinating group activities
- good written communication skills for report writing
- the leadership and interpersonal skills required in daily contact with inmates and other members of the staff
- the ability to make quick and sound decisions in response to security or discipline problems
- the ability to work effectively as part of a team.

They should enjoy having clear rules and guidelines for their work, dealing with people and supervising others.

Educational Requirements

(section revised SEPTEMBER 2005)

Correctional officers must have a valid driver's licence. Those employed with the **federal government must have at least Grade 12 education, and CPR and first-aid certification.** A degree in sociology, psychology or criminology is preferred. Volunteer work experience with people in crisis is a definite asset.

Candidates for correctional officer positions in the federal or provincial government must pass a prescribed medical examination and security clearance requirements. Applicants for federal government positions are also screened according to a values assessment interview and their ability to pass a general competency test. Once employed, federal government correctional officers must successfully complete a Correctional Officer Induction course and a probationary period.

Correctional officers with the **provincial government should have at least a high school diploma plus two years of work experience.** The work experience should be relevant with a particular emphasis on dealing with people. Applicants who have less education may be considered if they have two years of previous corrections experience, knowledge of native languages and culture, or equivalent experience and knowledge. There is a compulsory basic training course with an emphasis on communication skills.

In Alberta, the following post-secondary education institutions offer programs directly related to criminology and correctional services. For listings of other related programs, see the Psychologist, Sociologist and Social Worker occupational profiles.

- **Athabasca University** offers a Bachelor of Professional Arts degree program in Criminal Justice. Applicants must have an approved two or three year diploma in the criminal justice field from an accredited college or technical institute.
- **Bow Valley College** in Calgary offers a two year Correctional Services diploma program. The entrance requirements are a high school diploma with English 30 (30-1) or 33 (30-2) or equivalent.
- **Columbia College**, a private vocational school in Calgary, offers a full-time 25-week or part-time 50-week Criminal Justice Certificate program and a full-time 25-week or part-time 50-week Criminal Justice Diploma program. The entrance requirements for the Certificate program are a high school diploma with at least 60 per cent in English 30 and Math 30 or equivalent, a successful interview and a criminal record check.
- **Grant MacEwan College** in Edmonton offers a two year Correctional Services diploma program through full-time or part-time study and distance education. Applicants must be at least 18 years of age by the end of the intake term and have a high school diploma with at least 65 per cent in English 30 (or 75 per cent in English 33), or equivalent. Two letters of reference, an autobiography, security clearance and a Standard First Aid certificate are also required.
- **Lethbridge Community College** offers a two year Corrections diploma program and a Bachelor of Applied Arts - Corrections Studies program. The entrance requirement for the diploma program is a high school diploma or equivalent. Applicants are required to undergo testing, submit a resume, complete a questionnaire and attend an interview with a faculty member. Graduates from the diploma program will be accepted directly into the bachelor's program. Students with related credentials and prior related work experience will also be considered. Lethbridge Community College also offers a Criminal Justice certificate designed for aboriginal people.
- **Mount Royal College** in Calgary offers a four year Bachelor of Applied Justice Studies program. Applicants must have an average of at least 60 per cent in five appropriate Grade 12 subjects including English 30, Pure or Applied Math 30 and Social Studies 30.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Arts degree program in criminology. The entrance requirement is completion of one year of an undergraduate degree program (usually an Arts program) with a minimum grade point average of 6.0/9. This is a quota program so higher than minimum marks may be required for admission. Two letters of reference from relevant volunteer experience in criminal justice agencies, a resume, a written statement of career objectives and an interview are required.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For those already employed in the justice field, in-service courses are offered by **Alberta Justice Staff College**.

Employment and Advancement

In Alberta, federal correctional officers are employed in penitentiaries in Bowden, Drumheller, Grande Cache and Edmonton. Provincial correctional officers are employed in institutions in Calgary, Edmonton, Fort Saskatchewan, Grande Prairie, Lethbridge, Red Deer, Medicine Hat and Peace River. Advancement to supervisory positions depends on experience and training.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Correctional Service Officers occupational group working part-time or full-time earned from **$37,900 to $55,800 a year.** The average salary was **$45,900 a year.**

Correctional Services Worker

Produced APRIL 2003

Correctional services workers supervise adult and young offenders and administer a wide variety of correctional programs and services.

NOC Number(s): 4155.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: S M I

Duties

In general, correctional services workers in correctional or young offenders centres have the following duties and responsibilities:

- evaluate, classify and assess offenders, develop case plans and provide group and individual counselling
- orient newly-admitted offenders
- prepare offenders for release into the community
- assist in policy development
- perform administrative tasks.

Correctional services workers in a Living Unit environment (inside a correctional residential facility or young offender centre) are also responsible for the behaviour management and security of offenders assigned to their particular living unit.

Correctional services workers usually work in one of the following areas.

Youth workers work in young offender centres or open custody group homes with young people who have been charged under the Youth Criminal Justice Act and have been committed to custody or temporary detention by the courts. In general, youth workers:

- are responsible for security and supervision of daily living routines
- evaluate and assess young offenders and develop, implement and monitor case plans
- provide leisure and recreational activities
- conduct structured group meetings and provide one-to-one counselling
- communicate with probation officers, parents, guardians and others to plan for the release of the young person into the community
- prepare custody progress reports for court reviews of custody sentences.

Living unit officers in a correctional residential facility perform a variety of security and casework duties with adult offenders. They may:

- conduct security checks of the unit
- orient new offenders to the unit
- provide individual counselling, group counselling and referrals
- assist in pre-release and release planning
- maintain records of offenders' behaviour
- escort offenders.

Correctional centre caseworkers usually:

- examine offenders' backgrounds and make recommendations regarding training and individual program plans
- compile and classify personal, educational, employment and criminal information
- develop treatment and program plans
- advise offenders of their rights of appeal and facilitate access to the appropriate resources
- maintain contact with institutional and community resources and government agencies involved with after-release care and rehabilitation of offenders.

Working Conditions

Hours of work and working environments vary considerably depending on the type of work. For example, correctional services workers escorting offenders on day parole may take offenders to visit parents who are in hospital. Institutional staff work shifts.

Physical requirements also vary, depending on the type of position and the employer. Correctional services workers may be required to restrain offenders in some circumstances. Those who conduct security checks and orient new offenders must be ready to respond if a dangerous situation arises.

Personal Characteristics

Correctional services workers need the following characteristics:

- maturity and good judgement
- strong interpersonal skills
- strong verbal and written communication skills for writing and presenting reports.

They should enjoy dealing with and helping people, having clearly defined rules and organized methods, supervising others and encountering situations that entail some stress, risks or the unexpected.

Educational Requirements

(section revised SEPTEMBER 2005)

Entry-level correctional services worker positions generally require a **two year diploma or a university degree in a directly related field.** An equivalent combination of education and experience may be accepted. Candidates for federal government positions must be able to pass the Canada Fitness Test which includes standards for muscular strength and endurance, flexibility and cardio-respiratory fitness. Knowledge of native culture or languages is an asset.

In Alberta, the following post-secondary education institutions offer programs in criminology and correctional services. For information about other related degree programs, see the Psychologist, Sociologist and Social Worker occupational profiles.

- **Athabasca University** offers a Bachelor of Professional Arts degree program in Criminal Justice. Applicants must have an approved two or three year diploma in the criminal justice field from an accredited college or technical institute.
- **Bow Valley College** in Calgary offers a two year Correctional Services diploma program. The entrance requirements are a high school diploma with English 30 (30-1) or 33 (30-2) or equivalent.
- **Columbia College**, a private vocational school in Calgary, offers a full-time 25 week or part-time 50 week Criminal Justice Certificate program and a full-time 25 week or part-time 50 week Criminal Justice Diploma program. The entrance requirements for the Certificate program are a high school diploma with at least 60 per cent in English 30 and Math 30 or equivalent, a successful interview and a criminal record check.
- **Grant MacEwan College** in Edmonton offers a two year Correctional Services diploma program through full-time or part-time study and distance education. Applicants must be at least 18 years of age by the end of the intake term and have a high school diploma with at least 65 per cent in English 30 (or 75 per cent in English 33), or equivalent. Two letters of reference, an autobiography, security clearance and a Standard First Aid certificate are also required.
- **Lethbridge Community College** offers a two year Corrections diploma program and a Bachelor of Applied Arts - Corrections Studies program. The entrance requirement for the diploma program is a high school diploma or equivalent. Applicants are required to undergo testing, submit a resume, complete a questionnaire and attend an interview with a faculty member. Graduates from the diploma program will be accepted directly into the bachelor's program. Students with related credentials and prior related work experience will also be considered. Lethbridge Community College also offers a Criminal Justice certificate designed for aboriginal people.
- **Mount Royal College** in Calgary offers a four year Bachelor of Applied Justice Studies program. Applicants must have an average of at least 60 per cent in five appropriate Grade 12 subjects including English 30, Pure or Applied Math 30 and Social Studies 30.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Arts degree program in criminology. The entrance requirement is completion of one year of an undergraduate degree program (usually an Arts program) with a minimum grade point average of 6.0/9. This is a quota program so higher than minimum marks may be required for admission. Two letters of reference from relevant volunteer experience in criminal justice agencies, a resume, a written statement of career objectives and an interview are required.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Correctional services workers are employed primarily in:

- correctional centres
- young offender centres
- open custody group homes
- community corrections offices.

They may be employed by:

- the federal government
- the provincial government
- private sector social service agencies.

Correctional services workers may advance to supervisory positions or, if they have the required qualifications, transfer to other areas in correctional service.

Correctional services workers are part of the larger National Occupational Classification 4155: Probation and Parole Officers and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Probation and Parole Officers and Related Occupations group which is expected to grow grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since correctional services workers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for correctional services workers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Probation and Parole Officers and Related Occupations occupational group working part-time or full-time earned from **$20,600 to $68,100 a year.** The average salary was **$45,800 a year.**

Cosmetician

Produced FEBRUARY 2004

Cosmeticians demonstrate and sell cosmetic products and advise customers about their use.

NOC Number(s): 6482.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M S O**

Duties

Cosmeticians serve customers in department stores, drug stores and other retail beauty establishments. In general, they:

- promote and sell skin care and cosmetic products
- help customers identify personal needs and preferences
- advise customers about skin care in general and how to care for problem areas in particular
- advise customers about colours and types of make-up
- show customers how make-up can change their appearance and teach them how to apply cosmetic products
- keep customer records of the services provided and the products purchased
- book appointments for one-on-one demonstrations.

Depending on where they work, cosmeticians may also have responsibilities related to ordering, inventory control and merchandising (for more information, see the Visual Merchandiser occupational profile).

Working Conditions

Cosmeticians work in a retail environment and spend most of their working hours on their feet. Weekend and evening work is usually required, whether cosmeticians work full-time or part-time.

Personal Characteristics

Cosmeticians need the following characteristics:

- good communication and customer service skills
- a good sense of colour
- an interest in skin care and make-up
- the desire to maintain an attractive personal appearance.

They should enjoy:

- taking a methodical approach to compiling information
- serving and assisting people
- using specialized products and techniques.

Educational Requirements

There are **no standard education requirements** for cosmeticians. However, arithmetic skills, a high school diploma or related training are definite assets when seeking employment.

Most cosmeticians are trained on the job or have related post-secondary training. Many cosmeticians working in department stores and drug stores attend on-going training seminars sponsored by the companies that manufacture the products they promote.

People interested in this occupation should discuss their training and employment options with practicing cosmeticians and potential employers. For a list of private vocational schools that offer esthetics programs in Alberta, see the Esthetician occupational profile.

Employment and Advancement

(section revised JANUARY 2006)

Cosmeticians are employed in the cosmetics departments of retail stores.

With additional training, cosmeticians may move into related occupations (for more information, see the Esthetician and Make-up Artist occupational profiles). Some experienced cosmeticians are employed by cosmetic manufacturers as sales representatives. Opportunities to advance to supervisory positions in retail stores are limited.

Cosmeticians are part of the larger National Occupational Classification 6482: Estheticians, Electrologists and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry but most cosmeticians are employed in the **Retail Trade** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Retail Trade industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,350 Albertans are employed in the Estheticians, Electrologists and Related Occupations group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since cosmeticians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for cosmeticians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Cosmeticians generally earn hourly wages or a salary plus commissions.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Estheticians, Electrologists and Related Occupations group working part-time or full-time earned from **$11,100 to $45,500 a year.** The average salary was **$19,600 a year.**

Related Occupational Profiles

Electrologist
Esthetician
Make-Up Artist
Nail Technician
Retail Salesperson
Sales Representative (Wholesale, Nontechnical)

Costume Designer

Produced FEBRUARY 2004

Costume designers plan and create costumes and clothing accessories for theatre, dance, opera, television, video and film productions.

NOC Number(s): 5243.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M D**

Duties

Duties and responsibilities vary depending on the type of production but, in general, costume designers:

- read and analyze the script
- consult with the director and other designers (set designer, lighting designer, make-up artist) on the production team to develop design concepts
- do research to flesh out design concepts (e.g. geographical setting, time period, characters and their relationships and actions)
- produce drawings and colour renderings of costumes
- meet with the wardrobe manager and head cutter to discuss each design
- purchase fabrics, new or used clothing and accessories
- develop and implement a budget for costume-related expenses
- develop patterns for costumes if necessary
- attend fittings and some rehearsals (for theatre, dance or opera productions).

Depending on the nature, size and complexity of the production, costume designers may have assistants, or construct and fit costumes themselves.

In addition to the duties listed above, costume designers for large film productions:

- hire their own crew
- rent equipment for the workshop/office and onset costume truck
- attend shoots where new costumes are introduced to address desired changes
- wrap up after filming.

Working Conditions

Costume designers often work long hours to meet production deadlines. Their working conditions vary considerably depending on the discipline in which they work (eg. opera, theatre, dance, film) and the project. Some travel may be required to maintain steady employment.

Personal Characteristics

Costume designers need the following characteristics:

- creativity and artistic vision
- flexibility
- the communication and interpersonal skills required to work effectively with others and market their ideas and services
- the ability to work under pressure and the stamina required to work long hours
- the ability and desire to work in a team environment.

They should enjoy synthesizing information, experimenting and finding innovative solutions to problems, doing precise work with tools and equipment, and supervising the work of others.

Educational Requirements

Costume designers must understand colour, fabrics, composition and garment construction. They need **related post-secondary education**, preferably a bachelor's degree or master's degree with courses in drama or broadcasting, and clothing design and construction. Marketing and business-related courses are an asset because most costume designers work on a contract basis. Literature and history courses are also an asset because costume designers must be knowledgeable about period fashions as well as contemporary fashions.

In Alberta, many post-secondary institutions offer performance arts programs (for more information, see the Actor, Dancer and Instrumental Musician occupational profiles), some offer programs specifically related to technical production, broadcasting or film production (see the Set Designer and Film Director occupational profiles) and some offer programs related to fashion design (see the Fashion Designer occupational profile). The following institutions offer programs specifically in costume design:

- During the summer months, the **Banff Centre for the Arts** offers Theatre Production and Design programs for people who already have related training and experience. The Centre also offers Theatre Production Residencies. Applicants must submit a resume and a statement of learning objectives.
- The **University of Alberta** in Edmonton offers a four year Bachelor of Fine Art (BFA) degree program in theatre design. The entrance requirement is an average of 65 to 80 per cent in English 30 and four of the following: Biology 30, Chemistry 30, Pure Math 30, Math 31, Physics 30, Social Studies 30, Science 30, 30-level languages other than English, one fine arts subject. A portfolio, assigned design project and three letters of reference are also required. The University of Alberta also offers a Master of Fine Arts (MFA) degree in theatre design.
- The **University of Lethbridge** offers a four year BFA degree program in drama with a design/technical major. The entrance requirement is an average of at least 60 per cent in English 30, three other appropriate 30 level subjects and a fifth Grade 12 subject.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Costume designers work for:

- theatre companies
- film and television production companies
- opera and dance companies
- festivals.

Some theatre companies employ resident designers but most costume designers freelance and negotiate contracts for specific projects. Therefore, aspiring designers must acquire related experience and develop a portfolio of their work. Some volunteer to design costumes for amateur theatre companies or cable television stations to gain experience. Many gain experience by working in various crew positions and as designers' assistants.

Graduates of design programs usually start as designers for smaller productions or as assistant designers for larger productions. Advancement generally takes the form of more demanding assignments. A few costume designers teach at universities and colleges.

Costume designers are part of the larger National Occupational Classification 5243: Theatre, Fashion, Exhibit and Other Creative Designers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting funding for the arts
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since costume designers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for costume designers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Most costume designers are hired on contract for a season or particular production. Fees vary considerably, depending on the production and the designer's reputation.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Theatre, Fashion, Exhibit and Other Creative Designers occupational group working part-time or full-time earned from **$13,100 to $106,500 a year.** The average salary was **$28,900 a year.**

© Government of Alberta, Human Resources and Employment

Craftsperson

Produced OCTOBER 2003

Craftspersons use artistic and manual skills to design and make objects that may be functional, ornamental or communicative.

NOC Number(s): 5244
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I O M**

Duties

Craftspersons may specialize in designing and creating particular types of crafts or they may work in several media. For example, they may produce:

- clay products such as pottery, sculpture, tiles or art objects
- leaded and stained, flame-worked and blown, cast, fused or other glass objects ranging from beads to architectural installations
- traditional or contemporary jewellery
- metal objects such as furniture, utensils, light fixtures, knives or architectural details from materials such as wrought iron, steel or cast bronze and aluminum
- wood objects such as furniture, tableware, wildlife sculptures, musical instruments or architectural features
- fibre and fabric objects such as quilts, costumes, paper, woven goods or fibre art
- saddles or other leather objects
- ethnocultural or Aboriginal objects such as traditional or contemporary ceremonial objects or dance outfits
- special event items such as Ukrainian eggs or wedding jewellery.

In addition to working in their craft, craftspersons spend a considerable amount of time on business activities such as marketing and accounting.

Working Conditions

Most craftspersons work in home-based studios and set their own hours. Depending on their craft, they may have to observe safety precautions to avoid injury when working with hazardous chemicals, materials or processes.

Personal Characteristics

Craftspersons need the following characteristics:

- a passion for making things
- creative ability and talent
- determination, self-discipline and self-motivation
- good visual, tactile and spatial perception
- mind/hand co-ordination and dexterity.

They should enjoy using knowledge of their media to design and construct new things, and using tools and equipment to do work requiring precision.

Educational Requirements

There are **no standard education requirements** for craftspersons. However, to be successful, they need:

- indepth knowledge of their forms, materials and processes
- knowledge of related history and culture
- the ability to be innovative

- small business skills
- the ability to build a reputation through networking, self-promotion and marketing.

Craftspersons generally acquire their skills by taking related programs or courses and working with master craftpersons. Training programs may be offered by post-secondary institutions, artisan guilds or private studios. For many continuing education courses, there are no specified admission requirements. In some crafts, safety training is extremely important.

In Alberta, the following post-secondary institutions offer fine art programs with the option of a craft focus:

- **Alberta College of Art and Design** in Calgary
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **Red Deer College** (also offers Series Summer School of the Visual Arts)
- **University of Alberta** in Edmonton
- **University of Calgary**
- **University of Lethbridge.**

Admission requirements for full-time programs vary from one institution to another but generally include a high school diploma with English 30 and four other appropriate Grade 12 subjects, or equivalent. Some institutions specify a minimum acceptable average (60 or 65 per cent) in specified courses and most require submission of a portfolio of previous work.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Alberta post-secondary institutions offer programs related to Aboriginal crafts:

- **Northern Lakes College** in Grouard offers a 10-month Native Clothing Design program. Applicants must demonstrate a working knowledge of the metric system and be able to calculate percentages and interest.
- **Portage College** in Lac La Biche offers a 38-week Native Artisan program. Applicants must have a strong interest in Native Arts and Culture.

For information about other related post-secondary programs, see the Curator, Home Economist, Industrial Designer, Jeweller and Set Designer occupational profiles.

Many craftpersons go out of province or even out of country for advanced study in their field.

Employment and Advancement

(section revised JANUARY 2006)

Most craftspersons are self-employed. They may do custom work, sell wholesale to retail outlets and craft galleries, or market their work directly to the public. Those who market their work directly may sell items from home studios or at craft shows, or arrange to have their work displayed in retail stores, galleries and museums, office buildings and other public spaces. They may also market their work on the Internet or through publications and competitions.

Some craftspersons are employed as instructors by post-secondary institutions, private studios and recreational organizations.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and events affecting the economy as a whole
- **occupational growth** (newly created opportunities)
- **size of the occupation.**

Over 1,600 Albertans are employed in the Artisans and Craftpersons occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Craftspersons often work in other occupations to supplement their incomes until they have established a market for their products. Incomes for established craftspersons vary considerably.

According to the **Canadian Crafts Federation**, the national average gross income for craftspersons is about **$60,000 per year** which translates to an average **net** income of **$17,300 a year (2003 figures)**.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Artisans and Craftspersons occupational group working part-time or full-time earned from **$16,800 to $58,900 a year.** The average salary was **$30,500 a year.**

Crane and Hoisting Equipment Operator

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Crane and hoisting equipment operators service and operate the hoist and swing equipment used to move machinery, materials and other large objects.

NOC Number(s): 7371
Minimum Education: Apprenticeship Trade - Grade 10
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M I

Duties

Operators manipulate a number of pedals and levers to rotate cranes and raise and lower loads. Some or all of these operations may be performed simultaneously.

In Alberta, there are four types of crane and hoisting equipment operators: wellhead boom truck operators, boom truck operators, tower crane operators and mobile crane operators.

Wellhead boom truck operators set up and operate hydraulic booms used for wellhead pumping, wireline, perforating, coil tubing, snubbing, and the rig-up and rig-out of slant service rig operations.

Boom truck operators (formerly called medium or heavy boom truck operators) set up, service and operate hydraulic booms mounted on turrets affixed to trucks that are capable of moving heavy loads. Certification is required to operate:

- booms (including telescoping booms and articulating booms possessing live lines) capable of swinging, hoisting and booming up and down with a lifting capacity of greater than 4.5 tonnes and less than 40.8 tonnes.
- articulating booms without live lines with a lifting capacity of greater than 7.3 tonnes and less than 40.8 tonnes.

Tower crane operators service and operate travelling, fixed or climbing type hoisting equipment with a vertical mast or tower and a jib. Tower crane operators are often involved in assembling the crane on-site.

Mobile crane operators (including hydraulic and conventional crane mobile operators) service and operate booms which are mounted on crawlers or wheeled frames as well as travelling, fixed or climbing type hoisting equipment with a vertical mast or tower and a jib. Certification is required to operate mobile cranes 13.6 tonnes or more. Mobile crane operators also may:

- drive the crane to the job site
- rig the machine up by pinning the boom and pendant cables and pull the hoist cable in preparation for operation
- set up the machine for the lift by making it level and stable using blocking and levelling materials.

Working Conditions

Crane operators work outdoors, often in noisy, dusty conditions. Operators work in various locations throughout Alberta in all types of weather. A 40-hour, five-day work week is normal, but overtime may be required to meet construction deadlines. There may be some risk of injury due to power line contact, crane overload, falls, weather conditions or manual lifting.

Crane operators may be required to lift items weighing over 25 kilograms.

Personal Characteristics

Crane and hoisting equipment operators need the following characteristics:

- co-ordination and manual dexterity
- the ability to work in high places
- good vision
- the ability to work as part of a team and communicate with ground crews, usually using hand signals and voice

communication
- the ability to travel to different locations.

They should also enjoy working independently when necessary and be capable decision-makers.

Educational Requirements

To work in Alberta, crane and hoisting equipment operators must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:
- have at least an Alberta Grade 10 education (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees.

The **terms of apprenticeship** for the different branches of this trade vary.
- **Boom truck operators:** one year (one 12-month period) that includes a minimum of 1,200 hours of on-the-job training and five weeks of technical training.
- **Wellhead boom truck operators:** one year (one 12-month period) that includes a minimum of 100 hours of on-the-job training and three days of technical training.
- **Mobile crane operators:** three years (three 12-month periods) that include a minimum of 1,500 hours of on-the-job training and four weeks of technical training in the first year, a minimum of 1,500 hours of on-the-job training in the second and a minimum of 1,500 hours of on-the-job training and five weeks of technical training in the third.
- **Tower crane operators:** two years (two 12-month periods) that include a minimum of 1,000 hours of on-the-job training and three weeks of technical training in the first year and a minimum of 1,000 hours of on-the-job training in the second year.

There are no apprenticeship programs for **conventional** or **hydraulic mobile crane operators** at this time.

High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Only **mobile crane operator** apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry. The location of the training varies. Technical training for:
- **boom truck and mobile crane operators** is currently being offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton.
- **wellhead boom truck operators** is currently being offered at Enform (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council) in Nisku.

Currently, there is **no technical training available** for **tower crane operators**. In lieu of technical training and upon completion of the required on-the-job training and the term of apprenticeship, apprentices may attempt the first period theory and practical examinations (no fee) and if successful, complete the apprenticeship program.

Journeyman mobile crane operators are qualified to operate boom trucks as well as mobile cranes. Journeyman boom truck operators are qualified to operate wellhead boom trucks as well as boom trucks.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Crane operators are employed by general contractors and subcontractors in the forestry, mining, construction and oil industries and by crane rental companies.

Many crane operators must become members of unions as a condition of employment.

Experienced crane operators may advance to supervisory positions or set up their own crane rental businesses. Alberta certified journeyman crane operators who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Crane and hoisting equipment operators are part of the larger National Occupational Classification 7371: Crane Operators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Oil and Gas Extraction**
- **Mineral Products Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,850 Albertans are employed in the Crane Operators occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice **boom truck operators** earn at least 70 per cent of the journeyman wage rate in their place of employment. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$16 to $28 an hour plus benefits** (2005 estimate).

According to the Alberta Provincial Apprenticeship Committee for the **Conventional Mobile Crane Operators** trade, journeyman wage rates vary, but generally range from **$24 to $38 an hour plus benefits** (2004 estimate).

According to the Alberta Provincial Apprenticeship Committee for the **Hydraulic Mobile Crane Operators** trade, journeyman wage rates vary, but generally range from **$24 to $38 an hour plus benefits** (2004 estimate).

Apprentice **mobile crane operators** earn at least 70 per cent of the journeyman wage in their place of employment in the first year, 80 per cent in the second and 90 per cent in the third. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$24 to $38 an hour plus benefits** (2004 estimate).

Apprentice **tower crane operators** earn at least 70 per cent of the journeyman wage in their place of employment in the first year and 85 per cent in the second. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$24 to $38 an hour plus benefits** (2004 estimate).

According to the Alberta Provincial Apprenticeship Committee for the **Wellhead Boom Truck Operator** trade, journeyman wage rates vary, but generally range from **$16 to $28 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Crane Operators occupational group ranged from **$27,700 to $157,000 a year.** After three years, salaries ranged from **$35,800 to $203,200 a year.** The average salary was **$73,700 a year**.

© Government of Alberta, Human Resources and Employment

Creative Writer

Produced MAY 2005

Creative writers write literary works such as novels, short stories, essays, poetry, magazine articles and scripts for radio, television, theatre, film and video productions.

NOC Number(s): 5121.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M d**

Duties

Creative writers may write fiction such as short stories, scripts, novels or poetry, or nonfiction such as articles, biographies or essays. In general, they:

- research similar publications such as the magazines to which they would like to submit work (particularly for nonfiction works)
- write and rewrite their work until they and their editors or producers are satisfied with it
- initiate and maintain contact with appropriate publishers or producers
- market their work
- negotiate fees and royalties (for book-length manuscripts or feature-length scripts for film, writers may hire agents to act for them)
- may work with graphic artists or illustrators for book covers and other graphics.

Writers of novels and poetry usually finish writing their works before looking for a publisher. Nonfiction writers usually send query letters or proposals to editors before completing articles or books. Although some established television scriptwriters are assigned individual stories or entire series, most scriptwriters submit story ideas to producers hoping to get a contract for the finished script.

Fiction writers often do a considerable amount of public relations work such as book tours and readings of their work.

Scriptwriters often attend rehearsals for radio and theatre productions, or taping sessions for video productions, and work closely with directors and producers to ensure that facts and ideas are presented accurately.

Working Conditions

Creative writers spend much of their time working on their own, researching in libraries and on the Internet, and writing (at home or in an office). They are in regular contact with agents and publishers, and may spend some time interviewing people.

Freelance writers set their own hours. The pressure of deadlines, long solitary hours, unwilling publishers and sporadic work can be stressful.

Personal Characteristics

Creative writers must be able to express ideas clearly in writing. They also need:

- knowledge of their interest area and the ability to learn new things quickly
- outstanding research and organizational skills
- good interviewing skills
- the self-discipline required to work on their own and meet deadlines
- the ability to market their work.

They should enjoy gathering and synthesizing information, taking a methodical approach to writing, and informing or entertaining an audience through their writing.

Educational Requirements

Creative writers come from a wide variety of backgrounds. They must have a solid grasp of grammar and spelling, and be able to use language accurately, effectively and creatively. Particularly in the early stages of their careers, writers may participate in writing groups or attend writing workshops and conferences to develop their research and writing skills and polish their craft.

Post-secondary education does not ensure success but it helps to develop research and writing skills, organizational skills and professional contacts. A related diploma or degree also may give writers the credentials required to supplement their incomes by working in related occupations (for more information, see the Advertising Copywriter, Reporter, Technical Writer and Editor occupational profiles).

English, communications and other writing-related programs are offered by post-secondary institutions throughout Alberta. Entrance requirements vary but generally include a high school diploma with a minimum average (60 to 70 per cent depending on the program) in English Language Arts 30-1 (or English 30) and four other appropriate Grade 12 subjects (e.g. social studies, math, second language or science courses). Specific course requirements vary from one program to another. Keyboarding skills, a portfolio of written work, testing or an interview also may be required. For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Creative writing courses are offered by organizations such as the Canadian Authors Association, the Alberta Romance Writers' Association and the Writers Guild of Alberta, community-based writing organizations, the extension departments of colleges and universities, and the continuing education divisions of school systems.

Employment and Advancement

(section revised JANUARY 2006)

Creative writers may publish and market their work themselves or submit their work to publishers. Fiction writers and poets often do other types of writing as well or work in other occupations to supplement their incomes. Poetry in particular receives more admiration than financial reward but poets may sell their work to literary journals, greeting card companies or magazine publishers. They also may market their work through "autograph parties" or websites.

Writers of magazine articles may be employed by or do freelance work for the publishers of national, regional or specialty magazines (e.g. religious or recreation-related publications). Freelance periodical writers may sell an article to more than one magazine although this requires good negotiation skills and a solid understanding of copywright law.

Creative writers are part of the larger National Occupational Classification 5121: Authors and Writers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Information, Culture and Recreation**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,450 Albertans are employed in the Authors and Writers occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since creative writers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for creative writers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Considering the number of hours, sometimes years, creative writers may spend on their works before getting any financial return from them, writers often earn very little. For this reason, many successful freelance writers are also involved in business and technical writing, teaching, editing or doing voice-overs (reading scripts for radio).

Freelancer writers must negotiate their own fees unless minimum rates of pay for writers have been set by a union such as the Alliance of Canadian Cinema, Television and Radio Artists (ACTRA) or the Periodical Writers' Association of Canada (PWAC). Freelancers may be paid by the hour or by the word (this is common in magazines), or they may be paid a flat rate. Freelance screen writers are usually paid on a split-fee basis: one third in advance, one third after the first draft and the balance upon completion.

Writers whose adult fiction books have been published usually receive **up to 10 per cent of the total book sales,** more if they are celebrated and successful authors. They may receive an advance based on projected sales revenue from the book, depending on the genre (history, business, reference, children's book, etc.) and the reputation of the writer.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Authors and Writers occupational group working part-time or full-time earned from **$15,300 to $85,400 a year.** The average salary was **$42,600 a year.**

Credit/Loans Manager

Produced NOVEMBER 2005

Credit managers gather and analyze financial information about loan applications and business conditions, and approve or reject credit applications. They work in credit-granting organizations such as oil companies, banks, credit unions, retail stores, hotels and finance companies.

NOC Number(s): 0122.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D M S**

Duties

Credit managers ensure that those who want to borrow money are a safe financial risk to the organization. Many organizations offer loans and/or credit services to individuals (consumer credit) and businesses (commercial credit).

In smaller firms, credit managers may be responsible for cash management, profitability and portfolio growth as well as:

- accepting applications for credit
- checking credit ratings with credit bureaus and reporting agencies, and payment experiences with other suppliers
- granting or refusing credit
- setting up repayment schedules
- handling complaints
- collecting past-due accounts.

In larger firms, credit managers may:

- supervise a staff of credit personnel
- interview, hire and train employees
- help senior managers set credit policies, credit lines, procedures and standards.

Many larger organizations have credit operations in which the department that authorizes credit for higher level accounts is separate from the department that collects outstanding accounts. Different credit managers may be responsible for each department.

Working Conditions

Credit managers usually work in an office environment and may work long hours. They deal with people constantly, including staff members, people in business and industry, and the public. Commercial credit managers may travel to firms or plants to interview prospective borrowers and assess business operations.

Personal Characteristics

Credit managers need the following characteristics:

- integrity and honesty
- the ability to make independent decisions
- good negotiation skills
- organizational ability
- an aptitude for analyzing financial details and understanding financial reports
- accuracy and precision in dealing with figures
- persuasive persistence
- good oral and written communication skills
- problem-solving skills.

They should enjoy supervising and co-ordinating the work of others, having clear rules and methods to guide their activities and working with people.

Educational Requirements

Employers generally prefer to hire credit managers who have related post-secondary education in fields such as economics, finance, business, accounting or agriculture. Suitable programs are offered by institutions located throughout Alberta. The following post-secondary institutions offer finance-related degree programs:

- **Athabasca University**, which has an open admissions policy, offers four year Bachelor of Commerce and Masters in Business Administration (MBA)programs via distance education.
- **Concordia University College of Alberta** in Edmonton offers a four year Bachelor of Management degree program.
- **Grande Prairie Regional College** offers a four year Bachelor of Commerce degree program in collaboration with Athabasca University. Grande Prairie Regional College provides the classroom study and the degree is granted through Athabasca University.
- **The King's University College** in Edmonton offers a four year Bachelor of Commerce degree program.
- **Lakeland College** in Vermilion offer a Bachelor of Applied Financial Services degree program. The entrance requirement is successful completion of a two year diploma in Business Administration.
- **Mount Royal College** in Calgary offers a Bachelor of Applied Financial Services degree program. The entrance requirement is successful completion of a two year diploma in Business Administration.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a Bachelor of Applied Business Administration - Finance degree program. The entrance requirement is successful completion of a two year diploma in Business Administration with specified courses and a minimum GPA of 65 per cent, 2.3, 6 or C+.
- The **University of Alberta** in Edmonton offers four year and five year (co-op) Bachelor of Commerce degree programs and MBA programs with a specialization in finance. The entrance requirement for the bachelor's degree program is a pre-professional year with specific courses.
- The **University of Calgary** Haskayne School of Business offers four year and five year (co-op) Bachelor of Commerce and MBA programs with specializations in finance.
- The **University of Lethbridge** offers a four year Bachelor of Management degree program and post-diploma programs with a specialization in finance.

One and two year university transfer programs are offered by post-secondary institutions throughout the province.

First year admission requirements for university and university transfer programs vary from one institution to another but generally include a high school diploma (or equivalent) with a competitive average of at least 60 per cent (over 70 per cent for some programs) in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30) and three other approved Grade 12 subjects.

Two year financial planning or services diploma programs are offered by the following Alberta post-secondary institutions:

- **Lakeland College** in Vermilion
- **Medicine Hat College**
- **Northern Alberta Institute of Technology (NAIT)** in Edmonton
- **Red Deer College**.

Business administration and management programs are offered by:

- **Alliance University College** in Calgary
- **Athabasca University**
- **Canadian University College** in College Heights
- **Grande Prairie Regional College**
- **Keyano College** in Fort McMurray
- **The King's University College** in Edmonton
- **Lakeland College** in Vermilion and Lloydminster
- **Lethbridge Community College**
- **Medicine Hat College** in Medicine Hat and Brooks
- **Mount Royal College** in Calgary
- the **Northern Alberta Institute of Technology (NAIT)** in Edmonton and at various locations
- **Northern Lakes College** in Grouard and other locations
- **Portage College** in Lac La Biche
- **Red Deer College**

- the **Southern Alberta Institute of Technology (SAIT)** in Calgary.

Minimum admission requirements for financial planning and business administration programs vary but generally include a high school diploma with a specified minimum average or minimum marks in particular courses (e.g. Grade 12 English).

Continuing education programs are often offered on an as needed basis.

For current information on specific programs and their admission requirements, please check post-secondary calendars or websites.

The **Credit Institute of Canada** offers a four year Credit Management program that may be taken by correspondence through the School of Continuing Studies at the University of Toronto or by taking evening courses at the University of Alberta, the University of Calgary or NAIT. Some courses are available in day programs. To qualify for the Fellow of the Credit Institute (FCI) designation, students must:

- successfully complete the Credit Management program
- have at least five years of practical experience in credit and financial management
- maintain an annual national membership in the Institute.

The **Credit Union Institute of Canada** offers a 13 course Management Studies program leading to the designation Associate of the Credit Union Institute of Canada (ACUIC). Applicants for the program must be employed in a credit union or affiliated organization. To qualify for the designation, graduates of the program must have at least five years of related experience.

Organizations often have in-house training programs to help those in junior positions develop the skills needed to become credit managers. Trainees may work closely with experienced credit managers while working through the program.

Employment and Advancement

(section revised JANUARY 2006)

Credit managers are employed by organizations such as:

- industrial corporations and wholesalers
- large retail stores and retail chains
- commercial lending institutions
- banks, credit unions and trust companies
- finance companies
- reporting agencies and credit bureaus
- government treasury departments.

Depending on their qualifications, experienced credit managers may advance to senior positions in management, marketing or administration.

Credit/loans managers are part of the larger National Occupational Classification 0122: Banking, Credit and Other Investment Managers. In Alberta, over 75 per cent of people employed in this classification work in the **Finance, Insurance and Real Estate** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Finance, Insurance and Real Estate industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Employment growth is best for investment managers.

Over 4,100 Albertans are employed in the Banking, Credit and Other Investment Managers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since credit/loans managers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for credit/loans managers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Credit managers' salaries vary widely, depending on the size and nature of the employing organization and the training and responsibilities of the employee. Credit managers in commercial credit tend to earn higher salaries than managers in consumer credit organizations.

According to the **2005 Alberta Wage and Salary Survey**, part-time and full-time **starting** salaries for Albertans working in the Banking, Credit and Other Investment Managers occupational group ranged from **$23,500 to $109,500 a year.** The average salary was **$68,200 a year.**

© Government of Alberta, Human Resources and Employment

Critic

Produced MAY 2005

Critics review and analyze artistic and literary works and live performances. They may communicate their opinions via radio, television, newspapers, magazines, websites or books.

NOC Number(s): 5123
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: I S M

Duties

Critics review all facets of the arts and entertainment field: plays, films, books, operas, art exhibits, dance productions, musical recordings, concerts and nightclub acts. In general, they:

- attend performances or exhibits or preview books or recordings
- summarize the theme or story
- critique the quality of the performance or artistic work based on their judgement, experience and knowledge
- conduct interviews with performers, artists and writers
- educate the public by providing insights and background knowledge about the arts.

Critics may write or broadcast regular arts and entertainment features which include interviews with artists, in-depth analyses or information about upcoming events or new artistic works.

Most critics specialize in one area of the arts such as music, film or theatre. Some specialize even further in a particular aspect of a field. For example, a large newspaper may have a jazz music critic, a rock music critic and a classical music critic. However, critics working for smaller employers may be responsible for reviewing a wide range of performances and artistic works.

To keep up to date on trends in the arts and entertainment field, critics must spend a considerable amount of time reading, building contacts in their industry and keeping in touch with these people.

Working Conditions

Critics work evenings, weekends and holidays to cover performances, exhibits and events. Having to cope with tight deadlines and disgruntled readers can be stressful.

Personal Characteristics

Critics need the following characteristics:

- a strong interest in their field
- analytical and perceptive skills
- strong research and organizational skills
- flexibility in appreciating new techniques and styles in the arts
- objectivity and fairness in reviewing productions at different levels (professional or amateur)
- the ability to communicate clearly, concisely, objectively and in a strong personal voice
- the ability to handle criticism from others and the confidence required to stand behind their opinions
- the ability to produce creative, entertaining pieces under the pressure of deadlines.

They should enjoy finding innovative ways to express their views, stimulating public interest and discussion, and being recognized for their specialized knowledge, creativity and experience.

ducational Requirements

ough it is not necessary to have formal training to become a critic, most employers prefer to hire experienced print orters or broadcasters (who often have post-secondary education related to journalism). Critics also are expected to e strong backgrounds in their area of specialization (e.g. music, literature, art, drama). Being able to review several erent fields is an advantage, especially for freelance critics and those just getting started.

-secondary institutions located throughout the province offer suitable degree programs in communications studies, adcasting, music, art and drama. Entrance requirements vary but generally include a high school diploma with a imum average (60 to 80 per cent depending on the program) in English Language Arts 30-1 and four r appropriate Grade 12 subjects (e.g. social studies, math, a second language or science courses). Specific course irements vary from one program to another (e.g. Social 30 is required for some communications/broadcasting grams).

y post-secondary institutions also offer university transfer programs which allow students to apply up to two years of y toward Bachelor's degree programs at other institutions. It is the student's responsibility to ensure that the courses choose to take will be accepted for credit at the institution to which they wish to transfer.

current information about programs, admission requirements and mature student admission policies, please check -secondary calendars or websites.

nployment and Advancement

(section revised JANUARY 2006)

ics may work for:

- newspapers
- magazines
- alternative weeklies
- radio stations
- television stations
- Internet services.

re are relatively few jobs in the field of arts criticism and competition for employment is keen. Major metropolitan spapers and large circulation magazines hire a small number of critics as staff writers. They also may hire freelance cs to provide reviews and commentaries on specialized areas of the arts. Smaller newspapers and magazines usually loy freelance critics. Staff writers may be expected to cover a wide range of arts events.

io and television stations that have film, theatre and music reviews as part of their regular weekly programming may staff reviewers or freelance critics for these weekly features. Freelance critics sell their articles and interviews to ous print and broadcast media, and are paid for each article printed or aired.

difficult to get started as a critic or reviewer. Experience might come from writing for campus and community spapers or doing film or theatre reviews for local cable television stations. Aspiring critics should attend as many arts entertainment functions as possible and keep up to date in their field of interest.

e critics start out as general reporters or staff writers and eventually move into a reviewer's position when one comes n. Established critics can move to larger newspapers, work in radio or television or syndicate articles to a chain of spapers or broadcast stations.

ics are part of the larger National Occupational Classification 5123: Journalists. In Alberta, most people employed in classification work in the **Information, Culture and Recreation** industry.

employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Information, Culture and Recreation industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

r 1,600 Albertans are employed in the Journalists occupational group which is expected to grow 0.5 to 1.5 per cent n year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since cs form only a part of the larger occupational group on which this forecast is based, only a portion of the new tions created will be for critics.)

loyment turnover is expected to increase as members of the baby boom generation retire over the next five to ten rs.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Journalists occupational group working part-time or full-time earned from **$18,900 to $59,300 a year.** The average salary was **$43,100 a year.**

© Government of Alberta, Human Resources and Employment

Curator

Produced SEPTEMBER 2003

Curators acquire, document, study, interpret, maintain and provide access to collections of artifacts (products of human hands) and/or specimens (natural history items). In smaller museums, historic sites or galleries, they may be responsible for the overall management of the facility. In larger institutions, curators are usually responsible for specific collections or represent particular academic disciplines.

NOC Number(s): 5112.2
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M I**

Duties

Most curators specialize in human history artifacts, natural history specimens, or art objects. However, in smaller facilities, they may be responsible for all collections.

Duties and responsibilities vary considerably from one position to another but, in general, curators:

- develop collections policies and initiate and/or supervise collection development and research by studying the subject area(s) of the museum's collections and locating suitable objects within the community or through field work (e.g. archaeological excavations) or through other museums, private collectors, artists, dealers and potential donors
- conduct or supervise an acquisitions program in which objects and their stories are selected or collected
- develop and manage a collections management program that includes acquiring, researching, documenting, storing and cataloguing objects/specimens, and determining which objects will be maintained for display and storage
- ensure acceptable environmental conditions are maintained for storage, provide access to objects for research and study, and ensure that collections are preserved (or delegate this work to conservators)
- plan and assume a major role in organizing exhibitions by conducting research, determining themes, selecting materials and acting as consultants regarding the overall design (in some cases, this may involve establishing specifications criteria for reproductions, and overseeing their manufacture or selecting items from commercially available replica sources)
- prepare catalogues, display labels, grant applications, articles, texts/scripts and promotional publications related to exhibitions and the museum's collections in general
- participate in the development of programs and special events for visitors and students
- promote knowledge and study of the collection through lectures, tours, workshops, exhibitions and websites
- train, supervise and coordinate the work of junior staff and volunteers.

In smaller facilities, curators may also manage overall operations, deliver educational and public programs, co-ordinate special events, work with local media and governments, and participate in fundraising activities.

Working Conditions

Curators work in offices, storage areas and exhibition galleries, in the community at large and in the field (e.g. at archaeological sites). Their hours of work vary and often include evenings and weekends.

Curators are sometimes required to lift items weighing up to 25 kilograms.

Personal Characteristics

Curators need the following characteristics:

- a natural curiosity and a passionate interest in art, natural history or human history
- excellent research skills
- excellent oral and written communication skills
- good interpersonal and teamwork skills.

They should enjoy advising and co-ordinating the work of others, taking a methodical approach to their work and finding innovative solutions to problems. Those who work in smaller facilities should enjoy variety and multitasking.

Educational Requirements

In Alberta, there is no standard education requirement for curators but most facilities prefer to hire job applicants who have at least a **bachelor's degree in a related field of study.** Medium and larger institutions generally prefer to hire applicants who have a **master's degree** in a field such as museum studies, history, archeology, fine arts, art history, anthropology, botany, zoology or geology. Since this field is small and competitive, **graduate work at the doctoral level** is often required for employment in a large museum or university.

Post-secondary institutions throughout Alberta offer undergraduate Bachelor degree programs in appropriate fields. Entrance requirements generally include an average of 60 to 80 per cent in 30 level English, mathematics, science, second language or social studies courses.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The **University of Calgary** offers a 300 hour Heritage Resource Management certificate program through Continuing Education that includes 124 hours of workplace practicum. The entrance requirement is a high school diploma but consideration will be given applicants who do not have a high school diploma. Applicants should have significant related experience.

Museums Alberta offers a Certificate in Museums Studies program that includes eight core courses.

Outside of Alberta, the following institutions offer programs specifically related to curatorship:

- **Algonquin College** in Ottawa offers a three-year Applied Museum Studies diploma program.
- **Sir Sandford Fleming College** in Peterborough offers a four semester Collections Conservation and Management diploma program and a three semester Museum Management and Curatorship post-diploma program.
- the **University of Victoria** Department of History in Art offers a Bachelor of Arts degree program with a specialization in museum studies. The university also offers a post-graduate Cultural Resource Management diploma program through on-campus and distance education courses.
- the **University of Toronto**, the **University of Montreal** and the **University of Quebec** in Montreal offer master's degree programs in museum studies.

Employment and Advancement

(section revised JANUARY 2006)

Curators work in public and private museums, historic sites, universities, art galleries, zoos, botanical gardens and other related facilities. They may be employees or work as private contractors.

There are over 250 museums, historic sites, art galleries and zoos in Alberta. Some are seasonal; others are open year round. In medium and large facilities, curators usually start in junior positions and advance to more senior positions. When applying for a junior position, related volunteer or paid work experience and courses in museum studies are definite assets.

Curators are part of the larger National Occupational Classification 5112: Conservators and Curators. In Alberta, over 75 per cent of people employed in this group work in the following industries:

- **Information, Culture and Recreation**
- **Educational Services**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 200 Albertans are employed in the Conservators and Curators occupational group which is expected to grow 0.3 to 1.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since curators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for curators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries vary, depending on the nature of the organization (government or not-for-profit society), the size of the facility, the responsibilities of the position and the qualifications of the curator.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Conservators and Curators occupational group working part-time or full-time earned from **$15,000 to $67,100 a year.** The average salary was **$59,100 a year.**

Custodian

Produced JUNE 2003

Custodians clean building interiors, furnishings and equipment.

NOC Number(s): 6663
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O I**

Duties

Custodians may perform light duties or heavy duties.

Light duty cleaners:

- empty garbage containers and ashtrays
- service and clean washrooms
- dust and polish furniture
- wash and polish glass
- spot wash walls
- vacuum carpets
- sweep or damp mop floors.

Heavy duty cleaners:

- steam clean or shampoo carpets
- sweep, wet mop and scrub floors
- strip, seal, finish and polish floors
- remove waste materials from buildings
- wash walls and ceilings
- move heavy furniture, equipment and supplies.

Custodians may do all of the above or specialize in a particular area. They are often responsible for ensuring that all doors are locked and electrical items are turned off or unplugged.

School custodians also check and perform minor maintenance on heating and cooling equipment (e.g. change filters).

Industrial plant cleaners perform regular cleaning duties and ensure that machinery is free of lint and dust and excess oil and grease. They may also use a hand truck to transfer raw materials and semi-finished products between departments or buildings.

Working Conditions

Many cleaning duties are carried out in the late afternoon or evening when daytime employees have left the building. Custodians may work part-time on a nightly, weekly or monthly basis, or work full-time eight-hour shifts.

Custodians may be required to lift furniture and equipment weighing up to 25 kilograms. They usually work indoors, although some outdoor work may be required to clean sidewalks and driveways, or clean building exteriors.

Personal Characteristics

Custodians need the following characteristics:

- the ability to work on their feet for a complete shift while constantly bending, stretching, walking and lifting or moving things
- the ability to communicate effectively with others.

They should enjoy taking a methodical approach to their work and using equipment such as vacuum cleaners and floor polishers.

Educational Requirements

Most custodians are **trained on the job**. They need to know which cleaners to use for different purposes and which cleaning chemicals can be mixed safely.

There are no standard formal education requirements for custodians. However, employers may require job applicants to have one or more of the following:

- WHMIS (Workplace Hazards Management Information System) training
- letter of clearance from the police
- other security checks (e.g. Child Welfare Records check, Protection for Persons in Care Act screening requirements)
- a passing grade on an English literacy screening test.

Industrial positions may require related safety training such as CSTS (Construction Safety Training System).

NorQuest College in Edmonton offers a seven-week Building Service Worker program that includes two weeks of work experience. This program may also be taken part-time over 13 weeks. Applicants must be physically able to perform required tasks. Grade 8 English or GED recommended.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Custodians are employed by:

- private janitorial firms
- municipal, provincial and federal governments
- health authorities
- school boards
- apartment building owners
- banks
- retail outlets.

Custodians may subcontract their services or become contractors themselves. Many positions are part-time and competition for better paying jobs is keen.

There are limited opportunities for advancement to supervisory or inspector positions.

Custodians are part of the larger National Occupational Classification 6663: Janitors, Caretakers and Building Superintendents. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Management, Administrative and Other Support Services**
- **Educational Services**
- **Finance, Insurance and Real Estate**
- **Health Care and Social Assistance**
- **Accommodation and Food Services**
- **Repair, Maintenance, Personal and Other Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 22,850 Albertans are employed in the Janitors, Caretakers and Building Superintendents occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 350 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since custodians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for janitors and cleaners.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Hourly wages for custodians vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Janitors, Caretakers and Building Superintendents occupational group working part-time or full-time earned from **$10,800 to $70,400 a year.** The average salary was **$23,400 a year.**

© Government of Alberta, Human Resources and Employment

Customer Support Analyst

Produced JULY 2004

Customer support analysts answer computer-related questions, investigate complaints and work with others in a team environment to resolve users' software and hardware problems.

NOC Number(s): 2282
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M S o**

Duties

Duties and responsibilities vary in this rapidly evolving occupation but, in general, customer support analysts:

- respond to telephone calls from users who are experiencing computer-related problems or who need assistance using a particular software application (e.g. a spreadsheet, graphic, database, e-mail or word processing application)
- apply their knowledge of computer operations, software and hardware to answer questions
- ask questions to determine what is causing users' problems, walk users through possible solutions and diagnostic procedures, or attempt to duplicate errors on their own computers
- identify possible causes or consult other computer experts to research the problem and develop solutions
- explain software errors to computer programmers and recommend changes to programs
- arrange to have defective software and hardware products replaced or repaired
- keep their knowledge and skills up to date by communicating with other computer experts (electronically and in person), reading manuals and trade magazines and attending computer trade shows and seminars.

Depending on the employing organization, customer support analysts may also:

- test hardware and software
- train users on new applications
- install and maintain hardware, software and peripheral equipment (e.g. printers, scanners)
- conduct office automation feasibility studies (for more information, see the Information Systems Consultant occupational profile).

Customer support analysts generally specialize in the types of users they assist and/or the types of problems they deal with.

Working Conditions

Customer support analysts work in an office environment. They may work standard office hours or work shifts, including evenings and weekends, to ensure that someone is available to assist users whenever they need help. Overtime may be required to meet deadlines or to identify the source of a computer problem. Customer support analysts are occasionally required to be on call.

Some travel may be required if users are scattered in various locations. Analysts who install hardware may be required to lift heavy computer components.

Personal Characteristics

Customer support analysts need the following characteristics:

- a good speaking voice and excellent communication skills
- the ability to think logically and analyze complex problems
- the ability to pay attention to details and use abstract logic at the same time
- the ability to remain patient and persistent when dealing with frustrating problems and frustrated users
- the ability to get along with all kinds of people

- the ability to work well under pressure and meet deadlines
- the ability to work independently as well as in a team environment.

People in this occupation should enjoy work that involves analyzing problems and finding innovative solutions, taking a methodical approach to work that requires precision and taking responsibility for projects.

Educational Requirements

(section revised NOVEMBER 2005)

Most customer support analysts have completed a **post-secondary education program in computer science or a related discipline**. There are a wide variety of related three year and four year degree programs, two year diploma programs and one year certificate programs offered by universities, colleges, technical institutes and private vocational schools in Alberta. After graduation, analysts must continuously upgrade their knowledge.

Before enrolling in an education or training program, prospective customer support analysts should:

- decide what type of work they want to do (and in what industry)
- talk to potential employers about required and preferred qualifications.

In Alberta, the following post-secondary education institutions offer programs that may provide suitable training for this type of work:

- **Academy of Learning**, a private vocational school in Airdrie, Calgary, Edmonton, High River, Lethbridge, Medicine Hat, and Red Deer
- **Athabasca University** (distance education program)
- **CDI College of Business and Technology**, a private vocational school in Calgary and Edmonton
- **Concordia University College of Alberta** in Edmonton
- **DeVry Institute of Technology**, a private vocational school in Calgary
- **Grande Prairie Regional College**
- **Grant MacEwan College** in Edmonton
- **HCC Computer Training Centre and Computer Career College**, a private vocational school in Spruce Grove
- **The King's University College** in Edmonton
- **Lakeland College** in Lloydminster
- **Lethbridge Community College**
- **Medicine Hat College**
- **Mount Royal College** in Calgary
- **NorQuest College** in Edmonton
- **Northern Alberta Institute of Technology** in Edmonton
- **Prestwick College**, a private vocational school in Calgary
- **Red Deer College**
- **Southern Alberta Institute of Technology (SAIT)** in Calgary
- the **University of Alberta** in Edmonton and Camrose
- the **University of Calgary**
- the **University of Lethbridge**.

In general, the admission requirement for the university programs (other than Athabasca University) is a high school diploma or equivalent with an acceptable average (ranging from 60 to 70 per cent depending on the program) in English 30, Pure Math 30 and three other approved 30-level subjects (Math 31 and Physics 30 recommended). Admission to college and technical institute programs generally requires a high school diploma or equivalent with English 30 or 33 and Pure Math 30 (or a minimum average in English 33 or Applied Math 30) or mature student status.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Customer support analysts are employed by:

- large organizations that have their own Information Technology departments
- consulting firms that provide technical support services for other organizations.

In some organizations, customer support analysts are the first tier in a two-tier or three-tier support system. They provide initial response services and refer problems requiring greater expertise to technical support analysts.

Customer support analysts may advance to technical support analyst positions, client support analyst positions (providing on-site support for new business applications) and supervisory positions. They may also move into related occupations such as computer and network operator, systems testing technician or web technician. Those who have the required qualifications may move into computer programmer, database analyst, quality assurance analyst or web designer positions.

Customer support analysts are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation**.

Over 3,000 Albertans are employed in the User Support Technicians occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since customer support analysts form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for customer support analysts.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for customer support analysts vary depending on their qualifications and the responsibilities of their positions.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the User Support Technicians occupational group working part-time or full-time earned from **$18,300 to $81,800 a year.** The average salary was **$42,700 a year.**

© Government of Alberta, Human Resources and Employment

Customs Broker

Produced JUNE 2003

Customs brokers are employed by importers and exporters to clear goods through customs and ensure their timely delivery. They may also be involved in logistics or supply chain management.

NOC Number(s): 1236.1
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M S d**

Duties

Customs brokers use their knowledge of trade-related laws and regulations to move shipments through Canada Customs as quickly and efficiently as possible. They may also act as freight forwarders, consultants or legal agents for organizations such as importers, wholesalers and manufacturers.

In general, customs brokers:

- prepare and process import/export documents and other forms in accordance with customs regulations, laws and procedures
- arrange to pay duties, taxes, storage and goods transportation charges, and for bonds to cover dutiable goods
- provide advice about duty and tax rates on commodities
- provide advice regarding export and import restrictions, tariff systems, letters of credit, insurance requirements and other import/export-related matters (e.g. shipping requirements for domestic and foreign transportation services)
- provide audit services to help importers comply with Canada Customs and Revenue Agency requirements
- trouble-shoot problems when they arise
- represent clients before administrative tribunals or in other dealings with government officials.

Working Conditions

Customs brokers work in offices located in urban centres or at border crossing locations. They usually work a standard 40-hour week, but may have to be on hand evenings or weekends to meet scheduled shipments. Those employed in frontier or border offices often work shifts to provide 24-hour service for clients.

Personal Characteristics

Customs brokers need the following characteristics:

- the ability to keep up with ever-changing computer systems, trade and customs procedures, laws and regulations
- good oral and written communication skills
- the ability to work well with other people
- the ability to evaluate shipments quickly and handle many details in a short time
- the ability to work well under pressure when problems arise.

They should enjoy having clear rules and organized methods for their work, talking to people and making decisions.

Educational Requirements

The minimum education requirement for customs brokers is a **high school diploma**, but most employers prefer to hire applicants who have some post-secondary education related to economics, business or international trade. New employees' salary levels are determined by how much related education they have.

Newly hired employees in customs brokerage firms may start out as data entry clerks or customs runners who essentially run errands until they have learned enough about the business to advance to customs rater positions. Customs raters prepare documents in the office, and usually take a two year correspondence course from the **Canadian Society of Customs Brokers** to prepare for the exam required to become a qualified Customs Broker. Applicants for the CSCB correspondence course must:

- be over 18 years of age
- be citizens or permanent residents of Canada
- have high school diploma or equivalent education.

Employment and Advancement

(section revised JANUARY 2006)

Customs brokers are employed by customs brokerage firms, freight forwarders and importing firms.

Advancement in this occupation usually takes the form of pay increases and increasingly complex responsibilities.

Customs brokers are part of the larger National Occupational Classification 1236: Customs, Ship and Other Brokers. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Transportation and Warehousing**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Customs, Ship and Other Brokers occupational group which is expected to grow 1.2 to 2.2 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since customs brokers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for customs brokers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for customs brokers vary according to the complexity of their responsibilities and the amount of foreign trade they handle.

According to the **2005 Alberta Wage and Salary Survey**, Albertans with three years of experience working part-time or full-time in the Customs, Ship and Other Brokers occupational group earned from **$35,200 to $41,500 a year.** The average salary was **$37,300 a year.**

© Government of Alberta, Human Resources and Employment

Customs Inspector

Produced MAY 2003

Customs inspectors administer and enforce Canadian laws and regulations related to customs by controlling the movement of people, vehicles and goods in and out of the country.

NOC Number(s): 1228.3
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D O**

Duties

Customs officers protect Canadian society, the environment and industry by preventing the illegal importation of items (e.g. non-prescription drugs, guns, hate literature) and guarding against the introduction of human, animal and plant diseases into our society.

In the course of enforcing laws relating to customs and excise, customs inspectors inspect goods imported personally and commercially, and deal directly with the travelling public at airports, seaports and highway border points. In general, they:

- examine documents and interview travellers and importers
- examine personal and commercial shipments and monitor the movement of goods
- use established rules to determine taxable value and applicable duty and sales tax rates
- conduct investigations and enforce customs regulations
- ensure the correct duties and taxes are collected on imported goods
- explain the laws they enforce to members of the public
- add information to a computerized information data bank.

Working Conditions

Customs inspectors work at highway and rail border crossings, postal plants, airports, seaports and inland offices. Shift work is required because ports of entry generally operate 24 hours a day, seven days a week. Some offices are located in isolated areas.

There is an element of danger in this line of work, especially in situations where customs inspectors work alone.

Personal Characteristics

Inspectors need the following characteristics:

- good communication skills
- good decision-making skills
- physically fit
- interest in law enforcement
- able to deal effectively with the public
- confidence.

They should enjoy having clear rules and organized methods for their work, analyzing information to determine admissibility of goods, and handling goods and baggage.

Educational Requirements

The minimum education requirement for customs inspectors is **a high school diploma or an acceptable combination of education, training and experience**. Previous experience or education related to law enforcement is preferred, and experience in the following would be an asset:

- obtaining information through investigation
- processing import or export documentation
- using interviewing and examining techniques
- working with the public providing advice or guidance.

For information about Alberta post-secondary programs related to law enforcement, see the Police Officer occupational profile.

Job applicants for Customs Inspector positions must pass a test designed to evaluate job-related abilities. Some positions require that applicants be able to provide services in both official languages; other positions do not. Some language training may be provided after employment.

A valid driver's license is usually required.

Recruits must successfully complete a training program. The training includes Criminal Code enforcement training that requires recruits to be physically fit. Job candidates must also successfully complete a **14-week formal training program** at Rigaud College in Quebec. After successfully completing the program, they return to their home region for further **training on the job.**

Employment and Advancement

(section revised JANUARY 2006)

Customs inspectors are employed by the Canada Customs and Revenue Agency.

Experienced customs inspectors can apply on competitions for positions in customs supervision, management, administration, investigations, intelligence and special programs.

Customs inspectors are part of the larger National Occupational Classification 1228: Immigration, Employment Insurance and Revenue Officers. In Alberta, people employed in this classification work in the **Public Administration** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Public Administration industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Immigration, Employment Insurance and Revenue Officers occupational group which is expected to grow 1.7 to 2.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since customs inspectors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for customs inspectors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for customs inspectors range from **$43,900 to $48,600 a year (2003 estimate).**

Dairy Producer

Produced FEBRUARY 2005

Dairy producers operate dairy farms to produce bulk milk which goes to secondary processing to become table milk, cheese, ice cream, yogurt and other dairy products.

NOC Number(s): 8251
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **D M O**

Duties

Dairy producers may be owner-operators of small dairies who do most of the work themselves, or managers of larger operations who may supervise the work of others. Regardless of size, however, duties on a dairy farm include:

- milking, feeding, cleaning and caring for the dairy herd
- cleaning and sanitizing the milking equipment and milk storage tanks
- managing programs for breeding cows and raising calves
- inspecting and ensuring that sanitary conditions exist especially in the handling, collection and storage of milk
- hiring and supervising staff
- using computer applications to keep production, breeding and financial records
- producing, harvesting and storing feed crops (unless feed for animals is purchased).

Owners of large dairy farms may hire supervisors and herdsmen to help operate their businesses.

The dairy industry operates under a supply-management system which means that all dairy producers must obtain a quota from Alberta Milk before they can ship milk to processing plants. Once they obtain fluid milk or Market Share Quotas, they must be able to produce the specified amounts at all times.

Working Conditions

Working hours are long and variable. Dairy producers must follow a very strict daily schedule, milking and feeding cows two or three times a day, 365 days a year. After each milking, barns and equipment must be cleaned to keep conditions sanitary and safeguard the health of the dairy herd.

Although automation and mechanization has helped to make the work less tedious and physically demanding, heavy labour is still required. Lifting (up to 25 kilograms) is routinely required.

Personal Characteristics

Dairy producers need the following characteristics:

- good health
- strength
- good organizational skills
- patience and self-discipline
- the ability to work independently and with a team.

They should enjoy working with animals, taking a methodical approach to their work and operating machinery and equipment.

Educational Requirements

(section revised APRIL 2005)

Dairy production is a highly specialized business, calling for computer skills and a broad base of knowledge in animal welfare, herd health, breeding and reproduction, feed, mechanics, related technologies, marketing and business

management. Formal training through a college or university program as well as related work experience is an asset, especially for managers.

The **Alberta Green Certificate Farm Training Program** through **Alberta Agriculture, Food and Rural Development** is an apprenticeship-type program that combines practical on-farm experience and training with formal education in the form of home study courses, workshops, short courses or college agricultural courses. The Green Certificate program offers three levels of training:

1. farm technician (swine, dairy, cow calf beef, feed lot, sheep, crop and irrigated crop) requires approximately six to nine months to complete.
2. herdsman or production supervisor requires two or more years to complete.
3. farm business manager requires three or more years of training.

Applicants must be at least 15 years of age and have a supportive farm trainer and job site. Trainees who are also high school students can receive high school diploma credits in an approved optional curriculum for achieving a Green Certificate.

In Alberta, the following post-secondary institutions offer related programs:

- **Lakeland College** in Vermilion offers:
  - a two year Livestock Production diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or at least 65 per cent in ELA 30-2 or English 33), Pure or Applied Math 20 (or Math 20 or 23), and one of the following: Biology 20, Chemistry 20, Physics 20 or Science 20.
  - a certificate program in Dairy Production that includes work experience in the college dairy unit
  - a two year Animal Science Technology diploma program.The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or at least 65 per cent in ELA 30-2 or English 33), Pure or Applied Math 20 (or Math 20 or 23), Chemistry 30 and Biology 30.
- **Lethbridge Community College** offers a two year Agricultural Technology diploma program with a specialization in animal science. The entrance requirement is a high school diploma or equivalent (Math 33, Biology 30 and Chemistry 30 are recommended).
- **Olds College** offers a two year Agricultural Business diploma program. The entrance requirement is a high school diploma or equivalent with English Language Arts 30-1 or 30-2 (or English 30 or 33) and at least 55 per cent in Math 20 or 23 and in Biology 20, Chemistry 20 or Science 30. Olds College also offers an Agricultural Production and Management diploma program and a Bachelor of Applied Science degree program.
- The **University of Alberta** Faculty of Agriculture, Forestry and Home Economics in Edmonton offers four year Bachelor of Science (B.Sc.) degree programs in Agriculture, and Agricultural/Food Business Management. The entrance requirement for the Agriculture program is a high school diploma with at least 70 per cent in English 30, Math 30 or Pure Math 30, Biology 30, Chemistry 30 and one other approved 30-level subject. The entrance requirement for the Agricultural/Food Business Management program is completion of the first year of the Agriculture program with a grade point average (GPA) of at least 2.7/4.
- The **University of Lethbridge** offers four year degree programs in Agricultural Studies. The entrance requirement for the Bachelor of Arts degree program in Agricultural Studies is an average of at least 68 per cent in English 30, Math 30 or Pure Math 30 (or Applied Math 30), two other 30-level subjects plus a fifth Grade 12 subject (Biology 30 recommended). Admission to the Bachelor of Science degree program in Agricultural Studies requires Biology 30, Chemistry 30, and Math 30 or Pure Math 30 (Math 31 is recommended). The University of Lethbridge also offers post-diploma degrees in Agricultural Studies for graduates of approved agricultural diploma programs.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs are often offered on an as needed basis.

Employment and Advancement

(section revised JANUARY 2006)

Establishing a dairy operation requires a very large capital investment. Initial costs include land, buildings, quota, equipment and cows. Ongoing operating costs include feed, veterinarian fees, breeding expenses and labour.

For those seeking work on dairy farms as labourers, technicians, supervisors or managers, local Human Resource Development Canada offices are helpful in bringing together farmer-employers and potential employees. With courses, on-the-job training and experience, labourers on dairy farms can advance to positions of greater responsibility.

Individuals who have university degrees and dairy farm experience may move into positions in government, inspection agencies, industry organizations or private industry (e.g. feed companies).

Dairy producers are part of the larger National Occupational Classification 8251: Farmers and Farm Managers. Most people employed in this classification work in the **Agriculture** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Agriculture industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 35,950 Albertans are employed in the Farmers and Farm Managers occupational group which is expected to grow up to 0.5 per cent each year from 2005 to 2010 in Alberta. (**Note**: Since dairy producers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for dairy producers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Income from dairy production varies from operation to operation depending on the size of the herd, its production capacity and the size of the operation's debt load (loans and major expenses). Dairy farm income is often supplemented by sales of surplus animals, purebred stock and crop products such as grain and forage.

Dairy production ensures the dairy producer a regular monthly income.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Farmers and Farm Managers occupational group working part-time or full-time earned from **$16,200 to $83,200 a year.** The average salary was **$39,000 a year.**

© Government of Alberta, Human Resources and Employment

Dancer

Produced JULY 2003

Dancers use their bodies to interpret feelings, ideas, moods, music and drama. They may perform alone or with others in a group, before live audiences or in front of television and film cameras.

NOC Number(s): 5134.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M i d**

Duties

Most dance disciplines have a modern and a classical (traditional) side. Professional dance disciplines in Canada include:

- ballet
- modern
- folk or ethnic
- jazz
- tap
- musical theatre
- physical theatre
- ballroom
- country and western.

Most dancers in professional dance companies work in classical or contemporary ballet, modern dance or jazz. However, there are also professional ballroom and country and western dance duos and a limited number of professional tap, folk and ethnic dance companies.

Working Conditions

Dancers spend long hours in rehearsals, training and practice. They may lift over 25 kg (e.g. a fellow dancer). To avoid injury, dancers must:

- maintain superior athletic conditioning
- know their own capabilities and limitations
- be extremely nutrition-conscious.

Personal Characteristics

Dancers need the following characteristics:

- excellent health
- physical strength and excellent conditioning
- self-discipline
- self-confidence
- time and stress management skills
- the ability to think intuitively, creatively and logically
- problem-solving skills
- the ability to learn quickly and remember new and old choreography and music.

They should enjoy using their bodies to express ideas, practising and rehearsing the same movements repeatedly (competing with themselves to do their very best), and entertaining others. Many dancers feel they are "driven" to dance; it is how they best express themselves.

Educational Requirements

(section revised APRIL 2005)

Proper training by accredited instructors and schools is essential. Dancing requires tremendous passion and dedication plus years of continuous training, practice and hard work. In ballet, dancers should be on the professional track by their early teens.

Dancers need to find their own niche, but also be versatile. They must understand their body's capabilities and shortcomings (e.g. some dancers just do not have the bodily form and abilities for ballet), and find the type of dance most suited to their skills and abilities.

To maintain a professional performing career, dancers must:

- practice and train many hours each week, year-round, to keep their bodies toned, in shape and at their peak of athletic ability and quality
- have extensive knowledge and understanding of their own anatomy and physical abilities
- have a broad knowledge of nutrition and health, and live accordingly
- understand or at least have some music training (e.g. classes in music listening skills and theory)
- stay abreast of new training methods, choreography and new work by taking time off yearly for intensive refresher training with qualified teachers.

A working knowledge of lighting and costume design is an asset for communicating well with lighting technicians, costume designers, etc. Many dancers can also sing, play musical instruments and act.

Versatility is key to a dancer's success. After completing their training, dance professionals must continue working with a variety of dance teachers and choreographers. This provides exposure to different interpretations, movements and styles of dance.

There are numerous dance training methods recognized in Canada and advanced training is offered by a variety of private dancing schools. In Alberta, the following public post-secondary institutions offer dance programs:

- The **University of Alberta** in Edmonton offers a four year Bachelor of Physical Education degree program in dance. The entrance requirement is a high school diploma with at least 60 per cent in English 30 plus four other approved 30-level subjects. Only one language other than English will be accepted. A physical fitness test may be required.
- The **University of Calgary** offers a four year Bachelor of Arts degree program in dance. The entrance requirement is an average of at least 72 per cent in English 30 and four of the following: Social Studies 30, Pure Math 30, Applied Math 30, Math 31, Biology 30, Chemistry 30, Physics 30, Science 30, a language other than English, Dance 35, or one five-credit Grade 12 subject. An audition is required.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

The **Alberta Ballet School of Dance** offers summer programs for dancers ranging from beginner to professional levels.

Dance is a highly competitive field. Of all the students who train as dancers, very few become professional. It is important for dancers to have a broad knowledge and appreciation of the arts including music, visual art and architecture as well as the history of dance. A course in anatomy can also be helpful. A degree from a college or university, in addition to extensive dance training, can greatly benefit a dancer's career. Arts degree programs are offered by universities and colleges located throughout Alberta.

Before enrolling in any program, aspiring dancers are strongly advised to discuss their career plans with experienced professional dancers and representatives of professional organizations in the field.

Employment and Advancement

(section revised JANUARY 2006)

Today, dancers require good training and a well-rounded education to find work in the dance field.

As a rule, dancers' careers are relatively short-lived. Most professional dancers retire from performing in their late thirties. With appropriate training, experience and certification, they may become:

- dance critics
- choreographers
- art administrators
- artistic directors
- rehearsal directors

- dance teachers.

Dance teachers can maintain good careers if they remain in good health. Many dance teachers continue to instruct students into their late sixties or even seventies. For more information about related occupations, see the Choreographer and Critic occupational profiles.

In Alberta, most people employed as dancers work in the following industries:

- **Educational Services**
- **Information, Culture and Recreation.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 800 Albertans are employed in the Dancers occupational group which is expected to grow 1.4 to 2.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 20 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Salary

(section revised OCTOBER 2005)

Many dancers work in other occupations to supplement their incomes.

Some professional dancers are represented in Canada by the Canadian Actor's Equity Association, although this is not a requirement. The association sets minimum salary levels that are recognized by professional dance companies.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Dancers occupational group working part-time or full-time earned from **$12,700 to $45,300 a year.** The average salary was **$38,800 a year.**

Data Administrator

Produced JULY 2004

Data administrators develop and implement data administration policy, standards and models.

NOC Number(s): 2172.2
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I M D

Duties

Data administrators manage computer systems that provide efficient, effective access to information (data) stored in large databases. For example, in organizations that keep electronic records of customer data (e.g. name, address, phone number, credit card number, buying history), employees may use special software (database management systems) for a variety of purposes (e.g. to send out invoices or catalogues, or log purchases and incentive program points). Data administrators are responsible for the day-to-day operation of database management systems and for long range planning regarding system design and operation.

Specific duties and responsibilities vary depending on the size and type of employer. In very large organizations, data administrators may have specialized responsibilities and work in teams. In other organizations, one data administrator may be responsible for all aspects of data administration. In general, however, data administrators:

- develop and implement data administration policies (which describe the types of information collected, who has access to data, etc.), technical standards (which ensure data security, integrity and validity) and data models (which describe data elements and how they are used)
- consult managers in the organization to determine and document data requirements, data collection and administration policy, and data access rules
- advise others in the organization about the collection of data and its suitability for various uses.

Data administrators may also:

- develop and administer policies and procedures for accessing [illegible]using networks, backing up data and recovering lost data
- supervise the work of database analysts who design and maintain database management systems (for more information, see the Database Analyst profile).

Working Conditions

Data administrators work in modern offices with sophisticated information technology. They usually work standard weekday office hours but may have to work late nights or weekends to implement changes and deal with emergency situations (e.g. system failures). In some positions, travel may be required.

Dealing with system failures and negotiating with managers and other system users can be stressful.

Personal Characteristics

Data administrators need the following characteristics:

- the ability to learn quickly, think logically and understand abstract relationships
- excellent communication and interpersonal skills
- good stress management skills
- an interest in policy development and planning
- an interest in keeping up with ever-changing technology.

They should enjoy working with people from a wide variety of backgrounds, working in a team environment and solving problems.

Educational Requirements

(section revised FEBRUARY 2006)

Data administrators need a combination of related post-secondary education and experience. For example, they may have:

- a degree or diploma in **computer science** or a related discipline that has a significant information technology component, plus management-related education or related experience
- a degree or diploma in **commerce or management** plus computer-related education (e.g. a database vendor certification program) or related experience.

Data administrator is not an entry level position. Employers generally prefer to hire applicants who have several years of related experience.

There are a wide variety of degree, diploma and certificate programs related to computer science offered by universities, colleges, technical institutes and private vocational schools throughout Alberta. For a list, see the Computer Programmer occupational profile.

Some Alberta universities also offer Master of Business Administration (MBA) programs (for more information, see the Management Consultant profile) or software engineering programs (for more information, see the Software Engineer profile).

The following Alberta institutions offer programs specifically related to database administration:

- **New Era Technology**, a private vocational school in Calgary, offers a 40-week Database Administrator program. The admission requirement is a high school diploma with Grade 12 English and a Grade 12 math or equivalent. Applicants must also have completed an Advanced Windows 95/DOS 6.22 course and successfully complete a technical assessment test, a profile test, an aptitude test and an interview.
- **Prestwick College**, a private vocational school in Calgary offers a 47-week Oracle 9i: Database Administrator Professional program. The admission requirement is a high school diploma with Grade 12 English and Math 10 or any Grade 11 math or equivalent.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a 24-week Database Administrator certificate program and an eight-week optional practicum. The admission requirement is a high school diploma or equivalent with Pure Math 30, Applied Math 30 or Math 33 and English 30 or 33, English Language Arts 30-1 (English 30) or English Language Arts 30-2 (English 33). Applicants must have experience with relational databases such as Microsoft Access and operating systems such as Windows or UNIX/Linus.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Prospective data administrators should talk to potential employers about required and preferred qualifications before enrolling in an education or training program.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Most data administrators are employed in the head offices of large organizations in:

- the public sector (e.g. government departments, health authorities, education institutions)
- the private sector (e.g. retail chains, oil companies, telecommunications companies).

Some data administrators are employed by information technology consulting firms.

Experienced data administrators who have post-secondary education in business administration or management may advance to senior management positions or establish their own consulting firms.

Data administrators are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Database Analysts and Data Administrators occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since data administrators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for data administrators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for data administrators vary depending on the responsibilities of the position and the administrator's education and experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Database Administrators occupational group working part-time or full-time earned from **$23,600 to $163,500 a year.** The average salary was **$67,800 a year.**

Database Analyst

Produced JULY 2004

Database analysts are computer specialists who design, develop, modify and maintain database management systems to meet specific user needs.

NOC Number(s): 2172.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I M D

Duties

Database analysts develop database management systems to provide efficient, effective access to information stored in large databases. For example, database analysts may develop and maintain inventory and sales systems, patient record systems or systems such as the one used to publish this profile on the Internet.

Specific duties and responsibilities vary, depending on the size and type of employer. However, in general, database analysts:

- define system requirements by consulting data administrators (for more information, see the Data Administrator profile) and talking to system users about the types of information (data) needed, how data should be organized, who should have access to different types of data and how data should be reported (displayed or printed)
- design and develop data models (which describe elements of the data and how they are used) and database architecture by translating abstract relationships into logical structures
- construct, install and test database management systems
- work with users to assess system performance and modify systems as needed
- advise other professionals regarding the selection, purchase and use of database management tools.

Database analysts may also:

- train users and provide technical support while new systems are being tested and implemented
- modify existing databases as user needs and technological capabilities change
- customize commercial databases to meet specific needs.

Working Conditions

Database analysts work in modern offices with sophisticated information technology. They usually work standard weekday office hours but may be required to work overtime to meet project deadlines, deal with emergencies or implement system changes. In some positions, travel may be required.

The work can be stressful when users are demanding or systems do not work as planned.

Personal Characteristics

Database analysts need the following characteristics:

- the ability to learn quickly, think logically and analyze information
- the ability to build abstract structures of complex relationships
- the ability to focus on details without losing sight of the project as a whole
- excellent communication and interpersonal skills
- good stress management skills
- an active interest in keeping up with technological advances.

They should enjoy working with people from a wide variety of backgrounds, working in a team environment and solving problems.

Educational Requirements

Database analysts need **related post-secondary education**. Employers may prefer to hire applicants who have a four year bachelor's degree in computer science or a related discipline that has a significant programming component.

In Alberta, universities, colleges, technical institutes and private vocational schools offer a wide variety of degree, diploma and certificate programs related to computer science. For a list, see the Computer Programmer profile. Graduates must continuously upgrade their knowledge because computer technology is constantly changing.

Prospective database analysts should talk to potential employers about required and preferred qualifications before enrolling in an education or training program.

Other Requirements

(section revised OCTOBER 2004)

Information Systems Professional is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself an Information Systems Professional, you must be a registered member of the Canadian Information Processing Society of Alberta (CIPS Alberta). You do **not** have to be registered if you do not call yourself an Information Systems Professional.

Employment and Advancement

(section revised JANUARY 2006)

Database analysts are employed by:

- information technology consulting firms
- large public sector organizations such as government departments, hospitals and education institutions
- large private sector organizations such as financial institutions, telecommunications companies and insurance companies.

Advancement generally takes the form of greater responsibility for larger, more complex projects. Some experienced database analysts advance to supervisory positions or establish their own consulting firms. Advancement to management positions may require formal education in business administration.

Database analysts are part of a larger computer systems analysts occupational group. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Oil and Gas Extraction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,050 Albertans are employed in the Database Analysts and Data Administrators occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since database analysts form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for database analysts.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for database analysts vary depending on the responsibilities of the position and the analyst's education and experience.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Database Analysts occupational group working part-time or full-time earned from **$21,900 to $88,400 a year.** The average salary was **$58,100 a year.**

© Government of Alberta, Human Resources and Employment

Demographer

Produced DECEMBER 2005

Demographers plan and conduct research to study characteristics of human populations such as size, growth, composition, mobility and distribution.

NOC Number(s): 2161.2
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M D

Duties

Demographers study populations to determine the causes and consequences of changes in population size, mobility, distribution and composition. Much of their work involves:

- collecting and analyzing statistics concerning births, deaths and migration
- describing and analyzing other population characteristics such as age, sex, marital status, race, ancestry, school attendance, education level, employment, occupation, income and household size and composition.

In government and planning organizations, demographic statistics and projections are used to plan for and respond to population changes in an informed and reasonable manner. Changing demographics have far reaching implications in many areas (for example, education, health and social programs). Therefore, identifying, tracking and predicting population trends is vital to planners involved in activities such as drafting immigration policy, planning city services and developing public health, education and labour force training programs.

In business and industry, analysis of demographic data improves a company's understanding of:

- who its customers are
- how its markets are changing in size, location and characteristics
- how products or services may have to change to respond to changing customer/client needs
- where future opportunities might lie.

Familiar with data and its analysis, demographers in business settings often take on a market analysis role. They conduct research, write technical reports and present their findings to management and clients.

Working Conditions

Demographers generally work standard hours in an office environment but may work overtime to meet project deadlines. Some travel may be required to collect data or conduct surveys.

Personal Characteristics

Demographers need the following characteristics:

- an interest in societal trends
- good communication skills
- the ability to be objective, analytical and creative
- the ability to translate social issues and questions into numbers, and draw insights and conclusions from them.

They should enjoy synthesizing data, applying statistical theories and methods, and advising others regarding statistical methodology.

Educational Requirements

Most demographers have a university degree in sociology, economics, political science or statistics, and experience in applying statistical theories and techniques. Traditionally, a master's degree in demography, or in economics or sociology with a demography major, plus a background in statistics or mathematics has been the preferred qualification. However, graduates of marketing and advertising programs have begun to move into the field. The influence of computers in demography also has created job opportunities for computer science majors. Experience with Geographic Information Systems (GIS) programs or fluency in a second language can be a definite asset.

In Alberta, the **University of Alberta** in Edmonton offers a Master of Arts degree program in demography. The entrance requirement is a grade point average of 3.5/4 or equivalent in the last 20 single-term courses of a four year bachelor's degree program in sociology or a related discipline. Applicants should have at least one undergraduate single-term course in each of the following areas: statistics, research methods, theory, macrosociology and social psychology.

For information about relevant bachelor's degree programs, see the Sociologist, Economist, Political Scientist, Statistician, Management Consultant and Market Research Analyst occupational profiles.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Demographers are employed by:

- Statistics Canada and other federal government departments
- provincial and territorial government departments
- research, policy and planning branches of large municipal governments
- school boards, health authorities and social agencies
- universities
- international organizations in areas such as development aid and population planning
- public opinion polling firms
- businesses and consulting firms such as market research firms and actuarial firms.

Those employed in private industry often have other duties that are not strictly demographic in nature. Those employed in universities may teach courses outside the field of population as well as do population-related research. Some demographers operate their own consulting businesses.

Advancement often requires a master's or doctoral degree.

Demographers are part of the larger National Occupational Classification 2161: Mathematicians, Statisticians and Actuaries. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Finance, Insurance and Real Estate**
- **Educational Services**
- **Food and Beverage Products Manufacturing**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 450 Albertans are employed in the Mathematicians, Statisticians and Actuaries occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since demographers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for demographers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

In 2003, Albertans in the Mathematicians, Statisticians and Actuaries occupational group earned earned an average salary of **$58,800 a year** (2003 Alberta Wage and Salary Survey).

Dental Assistant

Produced OCTOBER 2004

Dental assistants work with health care professionals and related agencies in any or all of the following capacities: chairside assistant, intra-oral assistant, administrative assistant, community health assistant, dental education and research assistant.

NOC Number(s): 3411
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **M S O**

Duties

As chairside assistants, dental assistants:

- receive and prepare patients for treatment
- sterilize, prepare and set out dental instruments and materials
- process x-rays
- assist dentists during dental procedures
- record dental procedures performed
- educate patients.

As intra-oral assistants, dental assistants who have appropriate training and registration may:

- polish clinical crowns and apply fluoride
- apply dental dams, pit and fissure sealants, desensitizing agents, topical anaesthetic, and cavity bases and liners
- take preliminary impressions for diagnostic casts
- apply and remove matrices and wedges
- remove sutures
- place and fabricate temporary crowns and restorations
- expose radiographs (x-rays)
- perform periodontal screening and recording
- place and remove gingival retraction cords
- perform specialized orthodontic procedures.

As receptionists, dental assistants may:

- answer telephone calls
- co-ordinate appointment schedules
- keep records of bank transactions, treatment plan procedures and payroll
- use and maintain dental computer software
- maintain an inventory of supplies.

Working Conditions

Most dental assistants work in dental offices. They are often required to work some evenings and/or weekends to accommodate the needs of the public.

Dental assistants work as part of a dental health care team which may include dentists, dental hygienists, dental lab technicians and denturists.

Personal Characteristics

Dental assistants need the following characteristics:

- initiative
- the ability to put patients at ease
- good communication and interpersonal skills
- steadiness, the ability to remain calm under pressure and skill in coping with emergencies
- good organizational and time management skills
- the ability to co-operate and work as part of a team.

They should enjoy dealing with people, having clear guidelines, and operating and maintaining equipment.

Educational Requirements

In Alberta, dental assistants may:

- take a dental assistant training program and then look for related work
- find employment and take courses while they are working.

The **Northern Alberta Institute of Technology (NAIT)** in Edmonton and the **Southern Alberta Institute of Technology (SAIT)** in Calgary offer Dental Assisting programs that are accredited by the Commission on Dental Accreditation of Canada.

NAIT offers:

- a ten month Dental Assisting program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, Biology 30 and Chemistry 30. To be successful in this program, students must have basic computer literacy.
- Dental Assisting Independent Study certificate programs through Continuing Education. Applicants must be employed in a dental office at least 12 hours per week.
- direct patient care courses and refresher courses through Continuing Education.

SAIT offers:

- a ten month Dental Assisting program. The entrance requirement is a high school diploma or equivalent with an average of at least 60 per cent in English 30 or 33, Math 30, 31 or 33 or Pure Math 30, Biology 30, Chemistry 30 and a high school typing/keyboarding course.
- Dental Assisting courses through Continuing Education. Applicants must be registered as a RDA (registered dental assistant) and have successfully completed the National Dental Assisting Examining Board (NDAEB) examination.
- preparation courses for the NDAEB examination through Continuing Education.

Competition for admission to the ten month dental assisting programs is often keen so higher than minimum marks are generally required to gain admission.

Two private vocational schools in the province also offer dental assistant training programs:

- **Columbia College** in Calgary offers a condensed 28 week Dental Assistant program that includes a four to six week practicum. The entrance requirement is Grade 12 or equivalent.
- **KDM Dental College International Inc.** in Calgary and Edmonton offers an accelerated 25 week Dental Assisting program that includes four weeks of work experience. The entrance requirement is a high school diploma with at least 60 per cent in English and Math 30, and a Grade 11 science or equivalent. KDM Dental College in Calgary also offers a 104 week, part-time Dental Assisting program. Graduates of both programs are eligible to write the NDAEB exam.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Dental Disciplines Act and Dental Assistant Regulation, only registered members of the Alberta Dental Assistants Association (ADAA) may call themselves Registered Dental Assistants. Registered members are authorized to perform intra-oral procedures set out in the Regulation. Other dental office staff who are not registered may perform basic chairside dental assisting tasks.

Employment and Advancement

(section revised JANUARY 2006)

Most dental assistants are employed in private practice dental offices. Some are employed by community health agencies, hospital clinics and dental insurance companies.

Advancement opportunities for dental assistants are limited. With additional training, they may transfer into other dental occupations or become dental assistant educators.

In Alberta, most people employed as dental assistants work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,500 Albertans are employed in the Dental Assistants occupational group which is expected to grow 2.6 to 3.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 110 to 170 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Dental Assistants occupational group working part-time or full-time earned from **$15,800 to $62,200 a year.** The average salary was **$33,100 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Dental Hygienist

Produced NOVEMBER 2004

Dental hygienists assess and treat oral health conditions, provide preventive care, and educate people about dental hygiene procedures and strategies for promoting wellness.

NOC Number(s): 3222.1
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O S**

Duties

In general, dental hygienists assess, diagnose, plan, implement and evaluate dental hygiene care to help prevent oral disease such as cavities and periodontal (gum) disease. They work as part of health care teams that may include dentists, dental assistants, nurses, dietitians, occupational therapists or speech therapists.

Most dental hygienists work in dental offices or in community health clinics. In dental offices, they may:

- assess oral health conditions
- formulate dental hygiene diagnoses
- develop individualized treatment plans for clients
- use pain management techniques (which may include injecting local anaesthetic)
- counsel clients on oral health care
- expose, develop and interpret x-rays
- use delicate hand instruments and precision power instruments to provide clinical therapies such as scaling, root planing and oral prophylaxis (removing tooth surface deposits and stains) and other non-surgical therapies for periodontal disease
- apply cavity-preventing agents
- implement prevention programs
- refer to other health care professionals as appropriate.

In community (public) health settings, dental hygienists may:

- conduct needs assessments and surveys
- implement preventive and health promotion programs (e.g. regarding fluoridation, tobacco cessation or head and neck injury prevention)
- provide preventive therapies such as scaling and oral prophylaxis
- apply cavity-preventing agents
- counsel parents, students and seniors about oral health care
- complete school oral health inspections and visit classrooms to explain the importance of oral hygiene and proper diet, and provide instruction in the care of teeth and gums
- develop oral health policies for long-term care facilities
- generally promote oral health for all age groups.

Working Conditions

In dental offices and hospitals, dental hygienists work in sanitary, well-lighted surroundings. They generally work regular office hours but often work some evenings and weekends to meet the needs of the public. They may work full-time or have flexible work schedules. Most of the work is performed sitting down. They may be required to lift young children into the dental chair or help transfer adults from wheelchairs into the dental chair.

Dental hygienists working in community health have similar working conditions while caring for clients, but they also visit schools and community groups for inspections and educational presentations. They often have to transport portable equipment that may weigh more than 10 kg.

Dental hygienists must observe safety precautions to avoid injury or disease caused by biological agents (e.g. bacteria, viruses), radiation (e.g. x-rays), chemical agents used in radiology or infection control, or dental instruments and equipment. The most common occupational hazards are back, neck and shoulder problems and carpal tunnel syndrome.

Personal Characteristics

Dental hygienists need the following characteristics:

- a caring, responsible attitude
- good health
- good visual acuity
- the ability to move their hands easily and skillfully
- critical decision-making skills
- an interest in working with people and working as a member of a team.

They should enjoy taking a methodical approach to work that requires precision, working with and teaching people, and recording information.

Educational Requirements

In Alberta, the **University of Alberta** offers a Dental Hygiene diploma program and a four year Bachelor of Science (B.Sc.) Dental Hygiene specialization program. The diploma program requires one pre-professional year plus two years to complete. The degree program requires successful completion of the diploma program plus one year.

Admission to the diploma program requires 30 units of course weight (five full course equivalents) of university work that include:

- six units of organic chemistry
- six units of English
- three units of inorganic chemistry (general chemistry)
- three units of biology (microbiology, zoology, genetics, botany)
- three units of sociology
- three units of psychology
- three units of statistics.

24 of the 30 units must be taken during a Fall/Winter academic year.

The following high school courses are recommended to prepare students for the pre-professional year:

- English Language Arts 30-1
- Pure Math 30
- Chemistry 30
- Biology 30
- a fifth 30-level subject (e.g. Social Studies 30, Physics 30, Math 31, a language other than English).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Dental Disciplines Act and Dental Hygienist Regulation, only registered members of the Alberta Dental Hygienists' Association (ADHA) may call themselves Dental Hygienists. Registered members are authorized to perform procedures set out in the Regulation.

Employment and Advancement

(section revised JANUARY 2006)

Dental hygienists may be employed primarily as clinicians, educators, researchers, administrators, health promoters or consultants. They may work in:

- private dental offices
- institutions (e.g. hospitals, long-term care centres, correctional facilities)
- public health, community health, homecare and other outreach programs

- the armed forces
- government or regulatory bodies
- research or consulting companies
- dental insurance or supply companies
- post-secondary institutions.

Advancement depends on educational background and experience. Teaching, research and administrative positions require academic qualifications beyond the basic diploma program.

Dental hygienists are part of the larger National Occupational Classification 3222: Dental Hygienists and Dental Therapists. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,650 Albertans are employed in the Dental Hygienists and Dental Therapists occupational group which is expected to grow 2.0 to 3.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since dental hygienists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for dental hygienists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Dental Hygienists and Dental Therapists occupational group working part-time or full-time earned from **$16,300 to $97,600 a year.** The average salary was **$63,600 a year.**

Employee benefits such as insurance plans, workers' compensation coverage, educational leaves, sick leaves, etc. are not commonly offered to dental hygienists employed in dental practices.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Dental Technologist

Produced DECEMBER 2004

Dental technologists fabricate, duplicate, alter and repair prosthetic and orthodontic dental devices.

NOC Number(s): 3223.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O I**

Duties

Dental technologists work according to the prescriptions of dental professionals. They use specialized laboratory equipment such as:

- electric lathes
- microscopes
- drills
- small hand tools and rotary instruments
- high speed motorized equipment
- waxes
- torches and high heat furnaces.

Working Conditions

Dental technologists work in laboratories and dental offices. They usually work eight hour day shifts but some labs have rotating shifts.

Dental technologists are required to lift items weighing up to 25 kilograms and must observe safety precautions when working with potentially hazardous materials.

Personal Characteristics

Dental technologists need the following characteristics:

- a high degree of manual dexterity
- an aptitude for fine mechanical work
- the ability to visualize in three dimensions
- artistic ability combined with an aptitude for engineering
- patience and the ability to concentrate and pay attention to fine detail
- initiative and the ability to work to deadlines
- good communication and interpersonal skills.

They should enjoy analyzing prescriptions and taking a methodical approach to their work, working with tools and equipment at tasks that require precision, and finding solutions to problems.

Educational Requirements

The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Dental Laboratory Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, Pure or Applied Math 20, and Biology 30. To be successful in this program, students must have basic computer literacy.

For current information about the program and mature student admission policies, please check the NAIT calendar or website.

Other Requirements

Under Alberta's Health Professions Act and Dental Technologists Profession Regulation, only regulated members of the College of Dental Technologists of Alberta (CDTA) may call themselves Dental Technologists or Dental Technicians. Regulated members provide services listed in the Regulation as prescribed by dentists or denturists.

Employment and Advancement

(section revised JANUARY 2006)

Registered dental technologists may be self-employed or employed in specialized laboratories. For self-employed laboratory owners, success is dependent on personal initiative as well as technical skill.

Dental technologists are part of a larger dental technicians and technologists occupational group. In Alberta, most people employed in this classification work in the following industries:

- **Other Manufacturing**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 550 Albertans are employed in the Technical Occupations in Dental Health Care occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since dental technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for dental technologists.)

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Dental Technologists, Technicians and Assistants occupational group working part-time or full-time earned from **$15,600 to $113,900 a year.** The average salary was **$38,300 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Dentist

Produced NOVEMBER 2004

Dentists diagnose, treat, prevent and control orofacial disease.

NOC Number(s): 3113
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: I O s

Duties

In general, dentists:

- promote good dental health by advising patients about oral health care
- restore the function and appearance of damaged teeth
- remove teeth when necessary
- replace teeth with fixed or removable devises (bridges, partial and full dentures)
- treat diseases of the mouth and adjacent areas
- move teeth that are out of position
- diagnose and treat diseases of the gums
- perform surgical operations on the mouth or jaw and adjacent tissue
- diagnose and manage disorders of the temporomandibular joint and facial area.

With additional training, dentists may specialize in:

- pediatric dentistry (working with children)
- orthodontics and dentofacial orthopedics (correcting facial and dental irregularities)
- periodontics (treating diseases in the supporting structures of the teeth)
- oral and maxillofacial surgery (removing teeth and diseased tissue)
- oral medicine and pathology (diagnosing and managing diseases and conditions that affect the oral cavity and adjacent structures)
- endodontics (preserving diseased teeth by root canal therapy)
- public health (preventing dental disease and promoting dental health through organized community efforts)
- prosthodontics (restoring natural teeth and replacing missing teeth)
- oral and maxillofacial radiology (taking and interpreting dental and facial x-rays).

Working Conditions

Dentists usually work regular weekday hours but may work some weekend and evening hours. After hours emergency care is sometimes required.

Dentists perform most of their work sitting down, sometimes in uncomfortable positions. Dentistry can be a high stress occupation due, in part, to working with people who are often afraid or in pain.

Dentists use delicate hand tools and power-driven precision tools. They must use safety glasses, masks, gloves, and proper sterilization and disinfection techniques to prevent the transmission of disease to themselves or their patients. Safety precautions also must be observed when taking x-rays and using certain chemicals.

Personal Characteristics

Dentists need the following characteristics:

- good health
- good eyesight
- delicacy of touch
- a marked degree of mechanical aptitude and ability

- finger and manual dexterity
- resourcefulness
- good interpersonal skills
- ability to understand and handle many different types and ages of people.

They should enjoy finding innovative solutions to problems, doing precise work with tools and equipment and helping people.

Educational Requirements

The Faculty of Medicine and Dentistry at the **University of Alberta** in Edmonton offers the only four year program in the province that leads to the required degree, **Doctor of Dental Surgery (DDS).** The entrance requirement is completion of at least two full years of study at an approved university or college with courses in inorganic and organic chemistry, physics, biology and English. Admission requirements also include successful completion of the Dental Aptitutde Test and a structured interview. If the applicant's first language is not English, a minimum score of 580 is required on a TOEFL exam.

Competition for admission to the DDS program is keen. Students should strive for a grade point average (GPA) of at least 3.4/4 in their university courses. Students with less than a 3.0 GPA overall average or science-course average will not be considered.

Post-secondary institutions across Alberta offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

The entrance requirements for university transfer programs vary but generally include a high school diploma or equivalent with English 30 and four other 30-level courses (Pure Math 30, Biology 30, Chemistry 30 and Physics 30 recommended).

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Health Professions Act and Dentists Profession Regulation, registration with the Alberta Dental Association and College (ADAC) is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College may perform restricted activities specified in the Regulation. Only registered members may call themselves Dentists.

Employment and Advancement

(section revised JANUARY 2006)

Directly upon graduation, dentists may engage in private (solo) practice. However, partnerships with established dental practitioners and group practices are becoming increasingly popular.

Some dentists are employed by municipal, provincial and federal health services or the Canadian Armed Forces. Career possibilities outside of dental practice include working as dental educators, researchers or administrators.

In Alberta, most people employed as dentists work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 2,150 Albertans are employed in the Dentists occupational group which is expected to grow 3.5 to 4.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

In the larger cities in Alberta, the supply of dentists is almost equal to the demand. Better opportunities exist in some smaller centres where dentists can be reasonably confident of success in building a practice relatively quickly.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Dentists occupational group ranged from **$53,800 to $172,300 a year.** The average salary was **$111,500 a year.**

Denturist

Produced NOVEMBER 2004

Denturists are dental health professionals who specialize in the field of removable oral prosthesis (dentures). In partnership with other health care professionals, they assess, design, fabricate, repair and insert complete and removable partial dentures and diagnose related problems.

NOC Number(s): 3221
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M O I**

Duties

Denturists work directly with patients, independently or in collaboration with other health care professionals. In general, they:

- consult with clients, diagnose denture problems and formulate treatment plans
- perform the intra-oral (in mouth) procedures and laboratory procedures required to design dentures
- insert dentures to fit patients comfortably and properly
- repair, reline and adjust dentures as required.

Denturists work with dental instruments and machinery. They also use a variety of materials during the process of constructing dentures including:

- waxes
- gypsum materials
- metals
- plastics
- porcelains
- chemical solutions
- impression materials.

Working Conditions

Denturists work in denture clinics and associated laboratories (which are usually on the same premises). They work standard office hours but may put in longer hours particularly if they are self-employed.

Personal Characteristics

Denturists need the following characteristics:

- the ability to concentrate and make decisions
- manual dexterity for working with equipment and instruments
- patience
- excellent communication skills especially listening skills.

They should enjoy taking a methodical approach to diagnosing problems, analyzing information and experimenting with denture designs, and doing precise work with tools and equipment.

Educational Requirements

The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers the only training program for denturists in Alberta. The entrance requirement is a high school diploma or equivalent with English 30 or 33, Biology 30 and Pure or Applied Math 20 (or Math 23). To be successful in the program, students must be computer literate. Students gain practical experience by working with patients throughout this two year program.

Graduates of the Denturist Technology program are required to complete a 24 month internship approved by the College of Alberta Denturists and successfully challenge the College's examinations.

Other Requirements

Under Alberta's Health Professions Act and Denturists Profession Regulation, registration with the College of Alberta Denturists is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College may perform restricted activities specified in the Regulation. Only Regulated Members may call themselves Denturists.

Employment and Advancement

(section revised JANUARY 2006)

After they are registered as Regulated Members of the College of Alberta Denturists and have been issued a Practice Permit, denturists may continue to work for other employers or operate their own denture clinics.

In Alberta, people employed as denturists work in the following industries:

- **Health Care and Social Assistance**
- **Other Manufacturing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 250 Albertans are employed in the Denturists occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Employment growth is best outside major cities.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Denturists occupational group working part-time or full-time earned an average salary of **$46,600 a year**.

Diagnostic Medical Sonographer

Produced DECEMBER 2004

Diagnostic medical sonographers operate ultrasound equipment to produce and record images of body organs and masses including the fetus.

NOC Number(s): 3216
Minimum Education: 3 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O M i

Duties

Diagnostic medical sonographers work as part of a health care team which may include doctors, nurses and other medical technologists. Ultrasound is used to:

- monitor pregnancies
- assist in diagnosing heart, vascular, abdominal, pelvic and brain disorders
- assist in some medical procedures (e.g. placing drainage catheters, biopsies).

In general, diagnostic medical sonographers are involved in:

- obtaining, reviewing and bringing together pertinent patient history, information from physical examinations and supporting clinical data to facilitate diagnoses
- producing, assessing and evaluating ultrasound images to aid in diagnoses
- reporting technical findings to interpreting physicians (sonologists)
- educating patients and promoting the principles of good health.

Working Conditions

Diagnostic medical sonographers work in hospital and clinical settings. They may work shifts including some evenings and weekends, and may be required to be on call.

Sonographers often work with patients who are anxious. They assist patients on and off examining tables, and may experience unpleasant sights, odours and medically stressful situations. Working in awkward positions can cause repetitive strain injuries.

Personal Characteristics

Medical sonographers need the following characteristics:

- good upper body and shoulder strength
- the stamina required to spend hours on their feet
- good communication and observation skills
- the ability to visualize in three dimensions
- the ability to pay close attention to detail
- the ability to handle unpleasant situations
- teamwork skills.

They should enjoy operating equipment, observing patients to ensure their safety and comfort and compiling information.

Educational Requirements

In Alberta, accredited training programs for diagnostic medical sonographers are offered by the **Northern Alberta Institute of Technology (NAIT)** in Edmonton and the **Southern Alberta Institute of Technology (SAIT)** in Calgary. Both institutions offer a 28 month diploma program. The minimum entrance requirement is a high school diploma or equivalent with an average of at least 60 per cent in English 30, Biology 30, Pure Math 30 or Math 31,

Chemistry 20 and Physics 30 (or equivalent). These are quota programs so a much higher average may be required to gain admission.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Diagnostic sonographers must take continuing education courses to maintain their certification. Certification by the American Registry of Diagnostic Medical Sonographers (ARDMS) is obtained by successfully passing qualifying examinations.

Employment and Advancement

(section revised JANUARY 2006)

Since ultrasound does not expose patients to known hazards (as does ionizing radiation or the injection of dyes), its use in medicine is growing rapidly. Ultrasound is used in:

- internal medicine (abdomen)
- obstetrics and gynaecology
- ophthamology
- cardiology
- neurology
- muscular studies
- pediatrics.

Most sonographers are employed in hospitals and private clinics.

In Alberta, people employed as diagnostic medical sonographers work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 350 Albertans are employed in the Medical Sonographers occupational group which is expected to grow 2.7 to 3.7 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Employment prospects are best for diagnostic medical sonographers who also have cardiac training or vascular training (for more information, see the Cardiology Technologist profile).

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Medical Sonographers occupational group working part-time or full-time earned from **$50,700 to $73,800 a year.** The average salary was **$66,100 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Dietitian

Produced MARCH 2003

Dietitians develop, implement and evaluate food and nutrition strategies to promote health and treat disease; manage food service systems; and develop and deliver related programs and policies.

NOC Number(s): 3132
Minimum Education: 5 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **D I S**

Duties

Dietitians may work in health care, community, education, government or industrial settings. Duties and responsibilities vary from one position to another but, in general, dietitians:

- assess individuals' nutritional status
- develop, implement and evaluate nutritional interventions and programs
- manage food service departments or clinical and community nutrition services
- work with individuals, families, consumer groups and industry to help them apply nutrition principles
- develop and deliver food service and nutrition education programs
- conduct basic and applied research in food, nutrition and food service systems.

Dietitians may work primarily in health care, health promotion, food service management, education, business, private practice, research or a combination of settings.

Dietitians in the **health** field may:

- conduct nutritional assessments and provide nutrition counselling
- plan and direct nutritional care in collaboration with doctors, nurses, social workers, food and nutrition managers, rehabilitation therapists, pharmacists and other professionals
- work in the community in collaboration with community health promotion and home care programs
- make recommendations regarding public policy (for example, nutrition labelling, food fortification, nutrition standards for school programs).

Food service management dietitians manage all aspects of food preparation and service operations in hospitals, industrial organizations and businesses. In general, they:

- prepare and administer budgets
- develop food service policies
- monitor food purchasing procedures
- control food quality
- ensure safety standards are maintained
- plan menus
- co-ordinate recipe development and standardization.

Educators

- co-ordinate dietetic education programs in hospitals and the community at large
- educate the public about nutrition for health promotion and disease prevention
- promote workplace health and wellness
- train health care professionals and paraprofessionals.

In business settings, dietitians assist food and pharmaceutical companies, marketing associations and food service providers in developing, promoting and marketing food and nutritional products.

Consultants in private practice provide expertise in nutrition, diet therapy and food service to individuals, institutions, businesses and the media.

Researchers work in the research laboratories of universities and food and pharmaceutical companies. In universities, they may also have teaching responsibilities.

Working Conditions

Working conditions depend on the type of workplace and may vary considerably. Dietitians generally work weekdays, but may be on call weekends or required to deliver programs evenings or weekends.

Personal Characteristics

Dietitians need the following characteristics:

- analytical ability
- an interest in science
- good communication skills

They should enjoy co-ordinating and developing education materials and programs, analyzing information and solving problems, and working with people.

Educational Requirements

The minimum education requirement is a **four year degree in foods and nutrition** that has been approved by the College of Dietitians of Alberta.

In Alberta, the **University of Alberta** in Edmonton offers a four year Bachelor of Science degree program in Nutrition and Food Science with specializations in dietetics, food science and technology, and nutritional science. The entrance requirement is an average of at least 65 per cent in English 30, Biology 30, Chemistry 30, Math 30 or Pure Math 30, and one other approved Grade 12 subject. Physics 30 is recommended for the food sciences and technology major.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Health Professions Act and Registered Dietitians and Registered Nutritionists Profession Regulation, registration with the College of Dietitians of Alberta (CDA) is mandatory if you meet identified competency requirements and provide professional services directly to the public, teach the practice of the profession to members or students of the profession, or supervise registered members who provide services to the public. Registered members who are authorized by the College may perform restricted activities specified in the Regulation. Only registered members may use the protected titles Registered Dietitian, Registered Nutritionist or Dietitian.

Employment and Advancement

(section revised JANUARY 2006)

Dietitians work in a wide variety of workplaces, including:

- hospitals and long-term care facilities
- clinics and community health units
- social service agencies
- correctional services
- food processing companies
- pharmaceutical companies
- schools, colleges and universities
- government agencies

- the Armed Forces
- private consulting firms
- non-profit and community organizations.

Some dietitians are self-employed consultants.

Dietitians are classified in the larger National Occupational Classification 3132: Dietitians and Nutritionists. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 800 Albertans are employed in the Dietitians and Nutritionists occupational group which is expected to grow 4.5 to 5.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 30 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since dietitians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for dietitians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Dietitians and Nutritionists occupational group working part-time or full-time earned from **$15,600 to $66,700 a year.** The average salary was **$60,600 a year.**

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta website.

Digital Printing Machine Operator

Produced DECEMBER 2005

Digital printing machine operators use laser printers, computerized high speed colour copiers and other printing machines to print text, illustrations and designs on paper.

NOC Number(s): 9471
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O I**

Duties

Digital printing machine operators run machines that print images. Their duties and responsibilities vary depending on the type of machine but, in general, operators:

- review work orders to determine print job specifications such as ink colour and number of copies required
- set up and adjust printing machines (for example, fill ink reservoirs and load paper stock)
- use a keyboard or console to input instructions
- monitor print runs, trouble-shoot problems and make adjustments as required
- may perform routine maintenance functions such as cleaning machines and replacing worn parts.

In small shops, they also may:

- answer telephones and customer questions
- provide pricing quotes and write up print orders
- send faxes
- maintain supply inventories and keep records of print orders and shipments.

Working Conditions

Working conditions vary. In large companies that employ many digital printing machine operators, they may work in large plants. Smaller print shops that employ eight to ten people are usually located in an industrial bay or retail location. Shift work may be required and overtime is often required to meet print deadlines.

Digital printing machine operators frequently lift loads of paper weighing up to 25 kilograms and do a considerable amount of standing, bending and stooping. Fumes from solvents may be a concern for people who have allergies.

Personal Characteristics

Digital printing machine operators need the following characteristics:

- good literacy and numerical skills
- good colour vision
- good hand/eye co-ordination
- the ability to pay careful attention to details
- the ability to work under the pressure of deadlines
- the ability to stand for long periods
- tact and discretion when dealing with customers' material.

Those who work directly with customers also need good customer service skills.

All printing machine operators should enjoy taking a methodical approach to programming printers, operating and trouble-shooting machines, and working with little supervision.

Educational Requirements

Digital printing machine operators may learn on the job. They must be willing to update their skills frequently to keep up with changing technology. Employers may prefer to hire high school graduates who have related training or experience with computer-operated equipment.

In Alberta, the following institutions offer related post-secondary programs:

- **NorQuest College** in Edmonton offers a 20 week Press and Bindery Operator program. The entrance requirement is Grade 10 English and math. Graduates of this program may transfer credit toward the SAIT diploma program.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Digital Graphics Communications diploma program. The entrance requirement is a high school diploma with English Language Arts 30-1 or 30-2 (or English 30 or 33).

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Digital printing machine operators are employed in:

- rapid printing services
- commercial printers
- large organizations that have in-house printing facilities.

Experienced operators may become estimators who quote prices for customers or production managers or move into marketing and sales.

Digital printing machine operators are part of the larger National Occupational Classification 9471: Printing Machine Operators. In Alberta, over 75 per cent of people employed in this classification work in the **Other Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Other Manufacturing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 600 Albertans are employed in the Printing Machine Operators occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since digital printing machine operators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for digital printing machine operators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Printing Machine Operators occupational group working part-time or full-time earned from **$17,900 to $51,800 a year.** Salaries for digital printing machine operators are usually at the lower end of this range.

Direct Distributor

Produced OCTOBER 2003

Direct distributors demonstrate and sell products such as books, candles, clothing, cookware, cosmetics, craft supplies, gourmet food, home care items, toys and vitamins.

NOC Number(s): 6623.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M S d**

Duties

Direct distributors usually travel to potential customers' homes to demonstrate and sell products. They may also show, describe and sell goods or services at exhibitions and trade shows, or at special demonstration stands in shopping malls and stores.

Duties and responsibilities vary from one organization to another but, in general, direct distributors:

- set up displays or demonstrations
- show samples or product catalogues, and explain the functions and desirable qualities of products
- write orders and accept payment, or pass orders to others to process
- buy products from companies at wholesale prices
- deliver goods to customers or monitor orders sent directly from the company head office
- distribute advertising literature and/or leave samples
- demonstrate how orders can be placed on-line
- attend meetings about new products, sales techniques and special promotions.

To identify potential customers, direct distributors may contact people by telephone, use a person-to-person approach or sponsor events for groups of friends. They generally do not sell products door-to-door.

Direct distributors who use a **person-to-person** approach:

- identify and approach new customers through their network of personal contacts and encourage customers to recommend them to others
- show product samples (e.g. books, household cleaning products, cosmetics, costume jewellery, encyclopedias, foods and vitamins) to friends, relatives and people they meet through other activities
- may be required to operate within an exclusive territory but are usually allowed to find customers anywhere.

Direct distributors who use a **sales party or educational** approach:

- establish a party or teaching atmosphere at small gatherings in people's homes and display or demonstrate products (e.g. clothing, cookware, cosmetics, toys, crafts and hobby items)
- thank hosts for organizing parties, classes or shows by giving them merchandise or providing other benefits
- encourage participants to host similar events for their friends.

Direct distributors are generally expected to recruit new distributors and help them start their own businesses.

Working Conditions

Direct distributors may work part-time or full-time. Most work part-time from their own homes. Travel to customers' homes and conventions may be required.

Personal Characteristics

Direct distributors need the following characteristics:

- self-motivated
- enthusiastic

- persuasive
- willing to learn about the goods they sell
- enjoy working with people
- able to manage their time well.

They should enjoy presenting products and catalogues, encouraging people to purchase items and taking responsibility for projects.

Educational Requirements

There are **no minimum education** or experience requirements for direct distributors. However, experience in customer service or sales and fluency in more than one language are definite assets.

Some companies offer training programs, sales support, contests and promotions designed to help their direct distributors increase sales. Training programs and materials are usually supplied free of charge or for a small fee.

Before agreeing to work for any company, people considering this occupation should learn as much as possible about the company, particularly if some form of financial investment is required. Factors to consider include company reputation, number of years in business, business record and product or sales integrity.

Other Requirements

Self-employed salespersons such as direct distributors may be required to obtain a municipal business license.

Employment and Advancement

(section revised JANUARY 2006)

Most direct distributors operate home-based businesses associated with large manufacturers.

Advancement opportunities for direct distributors may take the form of additional or better sales areas, or recruiting other direct distributors who work under the direction and supervision of the person who recruited them.

Direct distributors are part of the larger National Occupational Classification 6623: Other Elemental Sales Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Retail Trade**
- **Management, Administrative and Other Support Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,250 Albertans are employed in the Other Elemental Sales Occupations group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since direct distributors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for direct distributors.)

The employment turnover rate is relatively high for direct distributors so there are usually positions available.

Salary

(section revised OCTOBER 2005)

Direct distributors' earnings are based on **commission,** and therefore vary from month to month, and year to year. Commissions may increase with sales volume.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Direct Distributors occupational group working part-time or full-time earned an average salary of **$58,600 a year**.

Dispatcher

Produced JUNE 2003

Dispatchers receive requests for service or emergency assistance and relay information to field personnel.

NOC Number(s): 1475.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M D S**

Duties

Dispatchers' duties and responsibilities vary from one position to another but, in general, they:

- answer telephone requests for service or receive requests from telephone operators
- process and transmit information to field personnel via radio or computer-aided dispatch systems
- prepare daily work schedules and runs
- dispatch personnel according to written schedules, work orders or protocols
- advise personnel about traffic problems, including construction areas, accidents, congestion, weather conditions and other hazards
- monitor workloads and/or locations of personnel
- maintain work records and prepare reports (e.g. accident reports, complaint forms)
- keep records and logs to document calls
- record mileage
- co-ordinate services.

Taxi dispatchers send taxi cabs in response to calls for service. They take requests for cabs, inform drivers by radio or telephone and log the calls and addresses given to each driver.

Tow truck dispatchers take calls from vehicle owners for emergency service. They record information such as the name of the caller, type of problem, vehicle location and description, and relay the information to tow truck drivers.

Utility company dispatchers receive requests for services related to gas, water, telephone or electricity. They take emergency reports from the public, obtain relevant information and dispatch a work crew (or other appropriate agencies if necessary).

Emergency services dispatchers who work in the communications departments of ambulance, fire or police services:

- take calls via telephone or alarm systems
- make decisions regarding the relative priorities of emergencies
- contact field personnel
- keep in touch with personnel being dispatched to send further information
- answer questions and ensure safety of the unit
- co-ordinate services from other agencies
- relay information to hospital emergency rooms.

Emergency service call takers are telephone operators who receive emergency calls for assistance. The information they receive is relayed to dispatchers of appropriate emergency services.

Working Conditions

Dispatchers usually work shifts, sometimes 12 hour shifts, including nights, holidays and weekends. They may have to work longer than their shift to complete calls or to wait for relief workers.

This work requires sitting for long periods of time. It can be stressful when dealing with emergency situations or with routine work punctuated by very busy periods.

Other working conditions vary depending on the type of employer. Dispatchers may work in small offices with simple telephone systems and poor lighting, or large offices with computerized systems and ergonomically-designed work stations.

Personal Characteristics

Dispatchers need the following characteristics:

- excellent communication skills
- good eyesight, hearing, manual co-ordination and dexterity
- the ability to listen to incoming requests for service and dispatch services at the same time (multi-tasking skills)
- a good memory for details and procedures
- good judgement and decision-making skills
- the ability to work well in a team environment
- the flexibility required to deal with the unexpected
- the ability to remain calm during busy periods and emergency situations.

They should enjoy taking a methodical approach to compiling information, operating communications equipment and talking to people.

Educational Requirements

Taxi, tow truck and utility dispatchers are **trained on the job**. Employers generally look for job applicants who have related work experience, at least some high school education and a good knowledge of the geographical area in which they work. Some employers consider dispatcher a supervisory position and require applicants to have previous dispatch or driving experience. A high school diploma and computer skills are definite assets.

Police and emergency dispatchers are required to have a high school diploma plus related formal or on-the-job training (e.g. experience working with multi-line telephone systems or working with people in distress). They may be experienced police officers or emergency medical services personnel.

In Alberta, the following post-secondary institutions offer Emergency Communications and Response programs:

- **Grant MacEwan College** offers an eight month certificate program. The entrance requirement is a high school diploma or equivalent. Skills appraisal (unless you have at least 65 per cent in English 30 or 75 per cent in English 33), keyboarding speed of at least 20 words per minute with 90 per cent accuracy, completion of a career profile, a hearing test and a criminal record check are also required.
- **Medicine Hat College** offers a nine month certificate program. The entrance requirement is a high school diploma or equivalent, and successful completion of a keyboarding assessment, career essay, program interview, hearing exam and criminal record check.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Dispatchers may be employed by:

- police, fire and health departments
- emergency service agencies
- taxi companies
- delivery and courier services
- utility companies
- trucking companies.

Most dispatchers work in private industry.

Experienced dispatchers employed in larger organizations may advance to supervisory positions but, in general, advancement opportunities are limited.

Dispatchers are part of the larger National Occupational Classification 1475: Dispatchers and Radio Operators. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Transportation and Warehousing**

- **Public Administration**
- **Management, Administrative and Other Support Services**
- **Construction**
- **Oil and Gas Extraction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,650 Albertans are employed in the Dispatchers and Radio Operators occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 130 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since dispatchers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for dispatchers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

Salaries for dispatchers vary considerably depending on the type of work and the employer.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Dispatchers occupational group working part-time or full-time earned from **$13,000 to $167,900 a year.** The average salary was **$44,800 a year.**

Domestic Housekeeper

Produced JULY 2003

Domestic housekeepers provide household management and personal services for family members in private homes.

NOC Number(s): 6471.2
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: M O s

Duties

Housekeepers employed by individual families may perform any combination of the following duties:

- plan, prepare and cook meals
- purchase groceries and household supplies
- serve meals and refreshments and wash dishes
- clean furnishings, floors, windows, kitchen appliances and bathrooms
- change linens and make beds
- care for children
- do laundry, ironing and minor mending repairs
- take out the garbage
- take care of pets
- run errands for the employer (e.g. drop off and pick up dry cleaning, pay bills, schedule minor home maintenance repairs).

They may specialize in a particular type of task, but it is not uncommon for domestic housekeepers to have a wide range of responsibilities.

Housekeepers employed by residential cleaning service companies may work individually or in teams. They travel from one private residence to another and often cleaning more than one residence a day. They generally perform only cleaning-related tasks.

Working Conditions

Some home management duties are physically demanding, involving standing for long periods of time or lifting items weighing up to 25 kilograms.

Domestic housekeepers may live in the household or come in at regularly scheduled times. The working environment is usually pleasant and live-in workers generally have their own furnished rooms or suites. Hours of work may be irregular.

Housekeepers employed by residential cleaning companies usually start work about 8 a.m. and work until the day's assignments are finished.

Personal Characteristics

All types of housekeepers need the following characteristics:

- good health and stamina
- the ability to follow written and verbal instructions
- good organizational skills
- the ability to work with little supervision
- the flexibility required to work varying hours.

Domestic housekeepers who work for individual families also need excellent interpersonal skills and the ability to maintain employer confidentiality.

Housekeepers should enjoy having clear rules and organized methods for their work and using cleaning materials and equipment.

Educational Requirements

For most domestic housekeeper positions in individual homes, formal education is not as important as related experience and the ability to cook, clean and get along well with others. However, the ability to speak, read and write in the language of the household and to take and direct telephone messages is essential. Character references are usually requested.

Housekeepers who work for cleaning services are trained on the job. Those who work through a placement agency must have verifiable references and a driver's abstract, and submit criminal record and child welfare checks.

Employment and Advancement

(section revised JANUARY 2006)

Domestic housekeepers may be self-employed, or employed part-time or full-time by a homeowner or a housekeeping service.

Housekeepers may move into related service occupations such as personal care attendant, nanny or institutional housekeeper.

Domestic housekeepers are part of the larger National Occupational Classification 6471: Visiting Homemakers, Housekeepers and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** following industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,200 Albertans are employed in the Visiting Homemakers, Housekeepers and Related Occupations group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 60 to 110 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since domestic housekeepers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for domestic housekeepers.)

There is a relatively high employment turnover rate in this occupation so positions are often available.

Salary

(section revised OCTOBER 2005)

Hourly wages for domestic housekeepers employed by individual families are generally low. Experienced housekeepers may earn **up to $12 per hour.**

Housekeepers employed by residential cleaning companies may be paid hourly wages or by the job (piece work). Some cleaning service companies provide vehicles for employee use but do not necessarily pay for gas.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Visiting Homemakers, Housekeepers and Related Occupations group working part-time or full-time earned from **$9,900 to $30,800 a year.** The average salary was **$18,500 a year.**

© Government of Alberta, Human Resources and Employment

Drafting Technician

Produced AUGUST 2005

Drafting technicians prepare engineering and architectural drawings, plans, diagrams and layouts. They may work independently as part of multidisciplinary teams or support the work of technologists, engineers, architects and other professionals.

NOC Number(s): 2253.2
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **M I O**

Duties

Drafting technicians use computer-aided design (CAD) applications, scientific calculators and traditional manual drafting techniques to prepare:

- engineering plans
- architectural plans
- flow diagrams and schematics
- layouts
- specifications
- maps
- detailed working drawings.

They also may be involved in related activities such as:

- estimating project materials and costs
- administering construction contracts
- preparing and interpreting specifications.

Drafting technicians may specialize in a wide variety of fields including:

- aerospace engineering - drawing aerospace vehicles and systems
- architecture - drawing commercial and residential buildings
- civil engineering - preparing drawings and maps for highways, pipelines, sewage systems and other construction projects
- electrical engineering - preparing circuit board, wiring and layout diagrams
- mechanical engineering - drawing machinery and mechanical devices
- urban, regional or park planning - drawing plans for urban or rural communities or parks.

Working Conditions

Drafting technicians usually work standard weekday hours in an office environment. They spend a considerable amount of time working with computers.

Personal Characteristics

Drafting technicians need the following characteristics:

- the ability to pay close attention to detail and be precise and accurate
- good eye-hand co-ordination and manual dexterity
- the ability to visualize three-dimensional objects from two-dimensional drawings and visualize the relationships between parts in machinery and systems
- the ability to communicate design ideas and solutions clearly and concisely orally and in writing
- aptitude for mathematics and physics
- good problem solving abilities.

They should enjoy taking a methodical approach to their work, analyzing data and finding innovative solutions to problems, and working with equipment and instruments at tasks that require precision.

Educational Requirements

(section revised SEPTEMBER 2005)

The minimum educational requirement is a year of related post-secondary education or an equivalent combination of education and experience.

In Alberta, the following post-secondary institutions offer one year drafting programs:

- **Bow Valley College**, in Calgary offers a one year Computer Aided Drafting and Design Technology certificate program. The admission requirement is a high school diploma or equivalent with at least 60 per cent in English 30-2 or 30-1 and a Grade 12 Math.
- **Digital School**, a private vocational school in Edmonton, offers 47 week Architectural, Civil, Engineering, Mechanical, Process, Structural and Survey/Geomatics CAD Technician programs. The admission requirement is a high school diploma or equivalent, and successful completion of an admissions interview.
- **Medicine Hat College** offers a one year Computer Aided Drafting and Design Technology certificate program. The admission requirement is a high school diploma or equivalent with Grade 12 English, Pure or Applied Math (or Math 30 or 33), Physics 20 and a Grade 12 science.

Individual courses in computer-aided drafting are offered by many public and private post-secondary institutions in the province. For information about institutions that offer related two year diploma programs, see the Architectural Technologist, Avionics Technologist, Civil Engineering Technologist, Electrical Engineering Technologist, Electronics Engineering Technologist, Engineering Design and Drafting Technologist, Geomatics/Surveying Technologist, Industrial Designer, Mapping Technologist, Mechanical Engineering Technologist, and Urban, Regional and Park Planners occupational profiles.

Continuing education programs are often offered on an as needed basis.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Drafting technicians are employed by:

- engineering consulting firms
- land survey companies
- private machine design firms
- architectural firms
- municipal, provincial and federal government departments
- building fabricators and other manufacturing and assembly companies
- companies in the petrochemical, food processing, pulp and paper and energy industries
- electronic manufacturing companies.

Drafting technicians do the same types of work as architectural technologists and engineering design and drafting technologists but they work under supervision and require several years of experience before they may assume the same level of responsibility as technologists.

Drafting technicians are part of the larger National Occupational Classification 2253: Drafting Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Metals, Metal Fabrication and Machinery Manufacturing**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 4,150 Albertans are employed in the Drafting Technologists and Technicians occupational group which is expected to grow 1.8 to 2.8 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 70 to 120 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since drafting technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Drafting Technologists and Technicians occupational group working part-time or full-time earned from **$16,600 to $150,100 a year.** The average salary was **$54,600 a year.** (Note: These figures include technologists' salaries which are generally higher than technicians' salaries.)

For more detailed information, see ASET's Annual Salary Surveys.

Drilling and Service Rig Managers

Produced AUGUST 2005

Oil and gas well drilling and service rig managers supervise large crews of specialized workers on drilling and service rigs.

NOC Number(s): 8222
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **D i o**

Duties

Drilling and service rig managers supervise rig activity and are responsible for safety on site. They are senior on-site company representatives for rig contractors.

In general, rig managers:

- co-ordinate the work of rig crews (a drilling rig has two or three crews)
- ensure that the entire drilling or well servicing operation runs smoothly, safely and efficiently
- ensure that operations comply with company policies and government regulations
- on drilling rigs, make arrangements to prepare area for drilling
- organize the setting up and dismantling of rigs
- ensure that emergency evacuation and medical procedures are posted and understood.

Working Conditions

Drilling and service rigs operate year round so rig managers work in all types of weather conditions. In Alberta, oil and gas wells may be located in remote areas, around small communities or near major centres.

Hours of work, location of the job and travel requirements vary with the company and the type of job contracted. Most service rig crews travel on a daily basis, usually in a 150 kilometre radius of the service rig contractor's central location. Drilling rig crews are expected to move with the rig to new locations. This often involves being away from home for extended periods of time.

Rig managers often work long hours. They also may be required to lift equipment weighing up to 25 kilograms.

Personal Characteristics

Rig managers need the following characteristics:

- the ability to work quickly and think ahead to the next procedure
- mechanical aptitude
- organizational skills
- communication skills
- physical health
- the ability to plan and direct the work of others.

They should enjoy co-ordinating the work of others, solving problems and working with tools, instruments and machinery.

Educational Requirements

Rig managers need the following training or certification:

- First Aid
- Fall Arrest
- Hydrogen Sulphide (H2S)

- Transportation of Dangerous Goods (TDG)
- Waste Hazardous Material Information System (WHMIS)
- Second Line Blowout Prevention (drilling rig managers) or Well Service Blowout Prevention (service rig managers)
- boiler operation (for more information, see the Power Engineer occupational profile).

They also should be knowledgeable about environmental issues related to oil and gas well drilling.

Employment and Advancement

(section revised JANUARY 2006)

Drilling rig managers start out as leasehands or floorhands and work as motorhands, derrickhands and drillers before becoming rig managers. Service rig managers start as floorhands and work as derrickhands and operators before becoming rig managers. For more information, see the Leasehand/Floorhand, Oil and Gas Service Rig Personnel and Rig Technicians (Levels 1, 2 and 3) occupational profiles.

Rig managers are part of the National Occupational Classification (NOC) 8222: Oil and Gas Drilling and Service Supervisors. In Alberta, most people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 13,000 Albertans are employed in the Oil and Gas Drilling and Service Supervisors occupational group which is expected to grow 2.2 to 3.2 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 280 to 420 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Drilling rig managers may be paid a day rate (about $600 a day) or an hourly rate. Depending on location and hours of operation, service rig managers may be paid a day rate (about $550 a day) or an hourly rate **(2005 estimates).**

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Oil and Gas Drilling and Service Supervisors occupational group working part-time or full-time earned from **$35,900 to $265,500 a year.** The average salary was **$87,600 a year.**

Drilling Rig Leasehand/Floorhand

Produced JULY 2005

Leasehands and floorhands perform general labourer duties on rigs that drill oil and gas wells and case wells with pipe.

NOC Number(s): 8412.1
Minimum Education: Less than high school
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M d**

Duties

Leasehands are the most junior members of a drilling crew. They may:

- load and unload trucks
- perform housekeeping activities such as cleaning ice from walkways, cleaning tools and putting things away
- watch for and remove hazards such as objects in travel routes
- assist other crew members.

Floorhands spend a lot of time working on the rig floor. There often are two floorhands on a crew but smaller rigs may have only one. In general, floorhands:

- use wrench-like power tongs to smoothly and quickly connect and disconnect the lower parts of the drill pipe when it is being lowered into and raised from the hole
- catch samples of drilled cuttings to be analyzed
- assist in laying casing into a well after it has been drilled
- clean and maintain equipment
- perform housekeeping tasks (keep the drilling floor clean, paint or scrub around the rig)
- assist other members of the drilling crew wherever needed.

Working Conditions

Working conditions vary depending on rig locations and weather conditions. Leasehands and floorhands work outdoors, often year round in remote locations, exposed to extremes in weather as well as to the dirt, dust, noise and fumes common around rigs.

The work is physically demanding and may involve lifting items that weigh over 25 kilograms. Because the work is potentially hazardous, all drilling crew members must think and act quickly, always follow standard safety practices, and participate in safety meetings and emergency procedure drills. Hazards include:

- working on wet, slippery rig floors
- working near or with heavy tools and moving machinery
- exposure to chemical substances such as paint, motor oil and drilling mixture additives.

Drilling rig workers are expected to move with the rig to new locations, wherever they may be. They may travel throughout the province and often are responsible for their own transportation to the work site. They work 12 hour shifts typically over a two week period and may live in camps or nearby towns. Usually, they get a week off between two week shift rotations.

Personal Characteristics

Leasehands and floorhands need the following characteristics:

- physical strength and stamina
- emotional stamina
- an interest in working outdoors and in remote areas
- the ability to get along well with co-workers

- a safety-conscious attitude.

They should enjoy having clear rules and guidelines for their work, working with equipment and machinery, and working in a team environment.

Educational Requirements

Leasehands and floorhands acquire the skills and knowledge they need by learning on the job and taking courses.

Employers require applicants to be at least 18 years of age, have a valid driver's license and have some high school education. High school graduation is not required for employment as a leasehand or floorhand but may be an asset for further advancement.

Enform (formerly Petroleum Industry Training Service and Canadian Petroleum Safety Council) in Calgary and Nisku (near Edmonton) offers courses for drilling rig crews members and pre-employment courses for people who want a better understanding of the work environment before working in the industry.

All new crew members must have first aid and H2S Alive certification (hydrogen sulphide training). Employers also may require crew members to take Fall Arrest or Waste Hazardous Material Information System (WHMIS) training.

Employment and Advancement

(section revised JANUARY 2006)

Leasehands and floorhands are employed by oil and gas well drilling contractors. Some rigs operate year round but employment is often seasonal for leasehands and floorhands. Winter is the busiest season for drilling activity.

The most important requirements for advancement on drilling rigs are on-the-job training, a positive team attitude and the ability to learn new things quickly. New employees usually start as leasehands or floorhands and later advance to motorhand, derrickhand and driller positions. For more information, see the Rig Technicians (Levels 1, 2 and 3) occupational profile. A conscientious, hard working individual who has good leadership skills can move from a leasehand position to that of rig manager in eight to ten years.

Leasehands and floorhands are part of the larger National Occupational Classification 8412: Oil and Gas Well Drilling Workers and Services Operators. In Alberta, most people employed in this classification work in the **Oil and Gas Extraction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Oil and Gas Extraction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,350 Albertans are employed in the Oil and Gas Well Drilling Workers and Services Operators occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 250 to 370 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since leasehands and floorhands form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for leasehands and floorhands.)

Salary

(section revised OCTOBER 2005)

According to salary standards recommended by the Canadian Association of Oilwell Drilling Contractors (CAODC) in October 2005, leasehands and floorhands should be paid a base wage of **$20.00 to $23.50 an hour.** When they are working away from home, they also may be paid a living or subsistence allowance (from **$25 a day** when in camp to **$100 a day** where there is no camp).

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Oil and Gas Well Drilling Workers and Services Operators occupational group working part-time or full-time earned from **$24,800 to $257,000 a year.** The average salary was **$60,100 a year.**

Driving Instructor

Produced OCTOBER 2003

Driving instructors teach the knowledge and skills required to safely operate vehicles such as cars, motorcycles, transport trucks and buses.

NOC Number(s): 4216.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: S D M

Duties

Driving instructors teach traffic laws and safety in a classroom setting and help students practice driving skills behind the wheel. Most driving instructors teach inexperienced drivers how to safely operate cars and light trucks. Some teach experienced drivers how to operate special types of vehicles such as motorcycles, large trucks or buses.

When teaching beginners how to operate a vehicle, instructors generally cover the following types of subjects in the classroom:

- traffic rules and regulations
- highway markings, signs and signals
- driver and pedestrian rights
- vehicle control and maintenance
- defensive driving attitudes and techniques
- how to proceed near bicycles and motorcycles
- how to drive in adverse weather conditions
- emergency and first aid measures
- the effects of drugs and alcohol on drivers
- motor vehicle and insurance laws
- use of safety belts.

Then driving instructors work with students individually to give them first-hand driving experience and help them develop defensive driving habits. Sitting next to student drivers in cars and light trucks, instructors show them how to:

- adjust seats and rear view mirrors
- release the emergency brake
- use turn signals
- interpret dashboard instruments
- start the vehicle
- check traffic and move forward
- brake
- put the vehicle in reverse
- make turns and change lanes
- merge into traffic and exit freeways
- park
- handle the vehicle safely in all traffic conditions
- handle situations in which other drivers are not driving safely or courteously
- hook and unhook trailers as required.

In larger vehicles, instructors show students how to conduct pre-trip inspections, operate air brakes and back up.

Working Conditions

Driving instructors' working hours must be flexible enough to suit student needs. Evening and weekend work is generally required. They may work long hours during the summer months and fewer hours in winter months.

Personal Characteristics

Driving instructors need the following characteristics:

- enthusiasm and the ability to instill confidence
- patience and a calm nature
- the ability to get along with all kinds of people
- good communication and teaching skills.

The work is most rewarding for those who enjoy dealing with people, instructing individuals and groups, and having clear rules and organized methods for their work.

Educational Requirements

Most driver training schools train their instructors on an ongoing basis. For a fee, some driver training schools will provide instructor training for non-employees.

To qualify for a driving instructor's license, applicants must have:

- a Class 1, 2 or 4 Alberta Operator's license (which requires a medical examination)
- no more than 6 demerits on their current driving records and no suspensions in the previous two years
- a criminal record check
- a minimum of five years of driving experience in the appropriate class (e.g. automobile instructors must have held a Class 5 operator's license for at least five years, truck driving instructors must have held a Class 1 license).

Applicants for a driving instructor's license must pass a multiple choice exam before they are allowed to take the road test. During the road test, applicants must demonstrate how they would instruct students.

Some schools require applicants for instructor positions to have no criminal record and no more than three demerits on their driver's license.

To teach in the Class 1 category (large trucks etc.), applicants must also hold a certificate from a recognized air brake course. Air brake courses are offered on an as needed basis by public technical institutes and colleges and private driving schools.

Employment and Advancement

(section revised JANUARY 2006)

Driving instructors are employed by commercial driving schools which are generally located in regional centres.

In larger driving schools, experienced instructors may advance to supervisory positions. With additional training or qualifications, driving instructors may start their own driving schools or move to positions dealing with public safety information, vehicle registration and inspection, accident investigation or motor fleet safety supervision.

Driving instructors are part of the larger National Occupational Classification 4216: Other Instructors. In Alberta, over 75 per cent of people employed in this classification work in the following **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,800 Albertans are employed in the Other Instructors occupational group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since driving instructors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for driving instructors.)

The employment turnover rate for driving instructors is fairly high so job openings are relatively frequent.

Salary

(section revised OCTOBER 2005)

Driving instructors are generally paid by the hour so their earnings vary according to the number of hours they work. Earnings also vary depending on whether instructors use company vehicles, or use their own vehicles and pay for car insurance.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Other Instructors occupational group working part-time or full-time earned from **$12,500 to $46,000 a year.** The average salary was **$23,300 a year.**

Dry Cleaning and Laundry Workers

Produced SEPTEMBER 2003

Dry cleaning workers clean clothes, drapes and other items using dry and wet cleaning techniques. Laundry workers clean clothes and linens that can be washed in water.

NOC Number(s): 6681.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M d**

Duties

The duties performed by dry cleaning and laundry workers vary, depending on the size and nature of the employing organization. Dry cleaning workers may be employed in small, independent dry cleaning stores or in large plants. Laundry workers may work for institutions (e.g. hospitals or prisons), diaper suppliers or commercial laundries which clean large quantities of items such as uniforms, bedding and towels.

In general, **dry cleaning workers:**

- examine articles to be cleaned and determine the type of treatment required
- sort articles according to colour, condition and type of material
- remove spots or stains using appropriate chemicals
- arrange articles in lots of equal weight
- load dry cleaning machines
- select the proper cycle for each load and add cleaning solvent or detergent to the machines (if the machines do not do this automatically)
- replace the filters used to reclaim the cleaning solvent so it can be used again
- smooth and shape clothing, textiles, furnishings and similar articles using a pressing machine.

In large plants, they may specialize in cleaning particular types of goods (e.g. carpets, drapery, fur, or leather and suede).

In general, **laundry workers:**

- sort soiled linen and clothing
- load and unload washing machines and extractors
- clean laundry machinery and buildings.

In large dry cleaning or laundry plants, **markers:**

- sort, record and mark soiled garments, linen and other articles to be dry cleaned or laundered
- examine articles for defects and send them for repairs
- measure draperies to determine charges and record measurements to ensure articles are finished to the original size
- test buttons to see if they must be removed
- remove ornaments and other trimmings where possible before articles are cleaned
- classify garments as to colour and fabric type and indicate the necessary treatment for each
- count the finished articles for completeness of order and verify the count with plant records.

Markers may work at the counter in drive-in plants.

Spotters:

- inspect soiled articles for stains, colour imperfections and items which require special treatment
- determine the cleaning procedure required
- remove stains using spotting agents and steam.

Pressers:

- operate pressing machines to press garments such as pants, shirts, sheets and cushion covers
- hand iron fine lace or silk garments.

In laundries, **sorters**, **finishers** and **folders** alternate between:

- shaking laundry before it is folded
- feeding items such as sheets and towels into pressing machines
- folding finished articles.

Working Conditions

Modern dry cleaning and laundry plants are clean, well-lighted and ventilated, and new machinery operates with a minimum of noise. However, the work is physically demanding and conditions may involve exposure to heat and/or dry cleaning fumes. Lifting items weighing up to 10 kilograms is routinely required.

Dry cleaning and laundry workers may be required to work shifts.

Personal Characteristics

Dry cleaning and laundry workers must be able to do routine, repetitive work and remain mentally alert.

They should enjoy operating machines and taking a methodical approach to their work.

Educational Requirements

Dry cleaning and laundry workers are **trained on the job and may take related distance education courses.** There are no formal education requirements but employers generally prefer to hire job applicants who have at least a Grade 10 education. Computer skills are a definite asset.

Employment and Advancement

(section revised JANUARY 2006)

Dry cleaning workers are employed in commercial dry cleaning plants and shops. Laundry workers are employed in commercial laundry establishments and large institutions such as hospitals. Some large institutions contract laundry services to private organizations instead of hiring laundry staff.

Experienced dry cleaning and laundry workers may advance to supervisory positions.

In Alberta, over 75 per cent of people employed as dry cleaning and laundry workers work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Health Care and Social Assistance**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Employment growth is best for workers who have a good knowledge of textiles and can perform a variety of tasks in the industry.

About 2,650 Albertans are employed in the Dry Cleaning and Laundry Occupations group which is expected to grow 1.1 to 2.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Dry Cleaning and Laundry Occupations group working part-time or full-time earned from **$11,300 to $51,600 a year.** The average salary was **$21,700 a year.**

Early Childhood Educator

Produced NOVEMBER 2005

Early childhood educators work with infants, toddlers, preschool and school-aged children in a variety of settings.

NOC Number(s): 4214.1
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M d**

Duties

In general, early childhood educators:

- develop and implement programs designed to meet children's social, physical, intellectual, creative, cultural and emotional needs in a play-based environment
- build children's self-esteem by establishing routines and positive guidance policies that allow children to feel secure, comfortable and safe
- establish and maintain good communication with children's families and community agencies involved in children's development.

Playschool and child care programs are based on children's interests and learning needs, and include the use of group activities, learning centres, outings and field trips. Activities are varied frequently and are designed to accommodate individual children's unique abilities. For example, a typical day's schedule might include:

- arrival and departure times
- storytime
- music, movement, drama and art activities
- play times, both guided and free
- snacks and meals
- quiet rest time
- outdoor play
- a special guest, event or field trip.

A well-designed educational environment for preschoolers includes opportunities to begin to develop independence, problem-solving, literacy, math and science skills through creative experiences such as imaginative play.

Out-of-school care programs include activities designed to enhance self-esteem and meet the unique needs of children aged six to 12. Educators in these environments are responsible for providing a safe, secure, relaxing and fun place for children to go before school, at lunch, after school and on school holidays.

Working Conditions

The working conditions for early childhood educators vary widely. Small programs in approved day homes may serve up to six children; other child care facilities may provide care for up to 80 children.

Hours also vary:

- Most child care programs are open from 6 or 7 a.m. until 6 p.m. so early childhood educators work a changing shift within those hours. Where non-traditional hour programs are offered, hours of work may vary more.
- Family day home operators may work evenings and weekends.
- Part-time programs or playschool/nursery programs may be offered anytime during the morning or afternoon and run one to five days a week.
- Out-of-school care programs may require staff to work split shifts or only before or after school, or full-time during school holiday periods.
- Family support programs often include evening hours.

Early childhood educators are on their feet most of the day and routinely lift babies and children weighing up to 25 kilograms.

Personal Characteristics

To promote positive attitudes and act as role models for the children in their care, early childhood educators must be able to:

- model appropriate behavior and language
- practice proper hygiene
- use clear communication techniques
- use consistent, positive child guidance strategies
- communicate effectively and work closely with children, parents and colleagues
- deal creatively and effectively with any problem situations that may arise.

They should enjoy dealing with people (especially children), taking a methodical approach to their work, taking responsibility for projects and supervising others.

Educational Requirements

The Alberta Day Care Regulation requires all educators in licensed child care centres and family day home agencies to have completed training in early learning and child care. Out-of-school care programs hire educators with early learning and child care training, or child and youth care training (for more information, see the Child and Youth Care Worker occupational profile).

In Alberta, early learning and child care programs are offered by the following post-secondary institutions:

- **Blue Quills First Nations College** in St. Paul offers Level 2 and Level 3 Early Childhood Development programs.
- **Bow Valley College** in Calgary offers one year certificate and two year diploma programs in Early Childhood Education. These programs are offered in a variety of formats including full-time, part-time, online and by audio-conferencing.
- The **CDI College of Business, Technology and Healthcare** in Calgary and Edmonton offers an 62 week Advanced Early Childhood (part-time) program.
- **Gardner College - A Centre for Christian Studies** in Camrose offers a 30 week certificate program and a 60 week diploma program in Early Childhood Development.
- **Grande Prairie Regional College** offers one year certificate and two year diploma programs in Early Learning and Child Care. All courses in the diploma program are available through tutor assisted distance delivery.
- **Grant MacEwan College** in Edmonton offers a two year Early Childhood Development/Education diploma program which may be taken full-time in Edmonton or Drayton Valley or part-time in other communities.
- **Keyano College** in Fort McMurray offers a one year certificate program and a two year diploma program in Early Childhood Development/Education.
- **Lakeland College** in Vermilion offers a one year certificate program and a two year diploma program in Early Childhood Development. Part-time programs are offered in outlying communities.
- **Lethbridge Community College** offers a one year certificate program and a two year diploma program in Early Childhood Education. These programs are available through distance learning.
- **Maskwachees Cultural College** in Hobbema offers 37 certificate and diploma programs in Early Childhood Development.
- **Medicine Hat College** offers one year certificate and two year diploma programs in Early Childhood Development/Education.
- **Mount Royal College** in Calgary offers one year certificate and two year diploma programs in Early Childhood Development/Education.
- **Red Deer College** offers a one year certificate program and a two year diploma program in Early Childhood Development. Print and Internet-based courses are offered via a combination of teleconferencing and seminars.
- **Reeves College** in Edmonton offers a 42 week Early Childhood Education program.

Entrance requirements vary but usually include a high school diploma or equivalent with English Language Arts 30-1 or English 30 (or minimum marks ranging from 50 to 65 per cent in ELA 30-2 or English 33). Mature students may be admitted with other qualifications. Programs that include practicums may require a Criminal Record Check and a Child Intervention Record check.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Early childhood educators are employed in

- child care centres
- family day homes
- nursery schools
- recreational centres
- kindergartens (as assistants)
- hospital playrooms
- out-of-school care programs
- centres for special needs children
- early intervention programs
- family support programs and resource centres
- women's shelters
- speech therapy offices.

Experienced early childhood educators may advance to supervisory positions or start their own businesses.

Early childhood educators are part a larger early childhood educators and assistants occupational group. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 16,600 Albertans are employed in the Early Childhood Educators and Assistants occupational group which is expected to grow 1.9 to 2.9 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 310 to 490 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Early childhood educators are paid hourly wages that vary tremendously throughout the province. Income and benefits generally depend on the size of the program, the nature of the employing organization, and the level of training the educator has completed.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Early Childhood Educators occupational group working part-time or full-time earned from **$10,900 to $75,000 a year.** The average salary was **$19,600 a year.**

Ecologist

Produced SEPTEMBER 2005

Ecologists study the relationships of living things to one another and to their environment, and examine the effects of a wide range of factors such as population size, rainfall, temperature, forest fires and major construction projects.

NOC Number(s): 2121.1
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I O D

Duties

Ecologists usually specialize in animal behaviour, botany, marine biology, microbiology, population dynamics, soil science, toxicology, zoology or related disciplines concerned with environmental conservation and management. Often working as part of multi-disciplinary teams, ecologists may conduct research studies into:

- how energy flows through ecosystems
- relationships among predators, parasites and prey
- the types and organization of plant communities in the landscape
- the effects of dam construction, mining, logging and recreational use on natural habitats
- the management of fish, wildlife and forestry resources
- the design of reserves and recovery plans for threatened species of plants and animals
- the effects of pollutants discharged into the air by factories or vehicles on natural vegetation and wildlife
- the effects of chemicals released into rivers and lakes on plant and aquatic animals
- the accumulation of contaminants by ocean fish and mammals
- the restoration of functioning ecosystems
- habitat changes after a fire
- fundamental underlying questions such as what determines population sizes or diet choices, or how nitrogen flows through an ecosystem.

Duties and responsibilities vary from one position to another but, in general, ecologists:

- plan and conduct field research which involves following rigorous scientific procedures to collect water, soil, plant or animal samples, and count and identify organisms
- use the data they collect or analyze existing data to understand and classify vegetation and landscapes
- use computers to develop geographic information systems (GIS) layers and products, maintain data in databases, model problems and evaluate possible solutions
- conduct studies to develop or refine ecological land classifications
- study animals over long periods of time, noting characteristics such as population numbers, life history patterns, behaviour, diet and habitat use
- study and dissect plant and animal specimens in greenhouses and laboratories
- conduct environmental impact assessments
- prepare written reports and recommendations
- provide information, make presentations and give talks for schools, clubs and interest groups
- supervise the work of technologists and technicians.

Working Conditions

Depending on the nature of their projects, ecologists may work outdoors in locations that may be rugged or remote, or indoors in laboratories and offices. Some ecologists work primarily on computers and use data obtained from other scientists.

Ecologists often work long hours. Some projects require hours of observation or weeks of travel. Others require the use of specialized equipment and techniques.

Personal Characteristics

Ecologists need the following characteristics:

- the ability to learn quickly, think logically and persist in a search for answers to complex questions
- an interest in nature
- the ability to remain objective
- good oral and written communication skills
- the ability to work independently and as part of a team.

Some types of field work require considerable physical stamina.

Ecologists should enjoy synthesizing information to develop innovative approaches to problems, using instruments and equipment to perform tasks requiring precision, and supervising research projects.

Educational Requirements

Ecologists must have at least one university degree with a solid grounding in biology (morphology, physiology, genetics, microbiology, zoology, botany, conservation biology), organic and inorganic chemistry, physics, mathematics, calculus, statistics and computer science. Depending on their area of specialization, ecologists also may have an academic background in such diverse subjects as climatology, economics, geology, mathematical modelling, meteorology, oceanography, sociology or soil science.

Most research jobs in ecology require **a graduate degree** in biological sciences: usually a master's degree, sometimes a doctoral degree (PhD). In Alberta, the following post-secondary institutions offer related graduate degree programs.

- The **University of Alberta** in Edmonton offers Master of Science (M.Sc.)and PhD degree programs in Biological Sciences. Admission requirements include a minimum grade point average (GPA) in the last two years of the applicant's previous degree program. The required GPA depends on the specialization.
- The **University of Calgary** offers M.Sc. and PhD degree programs in Biological Sciences. Applicants must have a GPA of at least 3.2/4 in the last two years of their previous degree program, be proficient in the English language and submit a statement of their research interests.
- The **University of Lethbridge** offers M.Sc. degree programs in Biological Sciences. Applicants must have a GPA of at least 3.0/4 on the last 20 graded university level semester courses in their previous degree.

University transfer programs and bachelor's degree programs in the biological sciences are offered by post-secondary institutions throughout the province. Admission requirements vary but generally include a high school diploma with an average of at least 60 per cent (up to 80 per cent for some programs) in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30), Biology 30, Chemistry 30 and one other 30-level subject (Math 31 and Physics 30 recommended). It is the student's responsibility to ensure that the transfer courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

For information about other post-secondary programs related to resource management and environmental science, see the Agrologist, Conservation Officer, Environmental Auditor, Forester and Park Warden occupational profiles.

Other Requirements

Professional Biologist is a protected title under Alberta's Professional and Occupational Associations Registration Act. This means that to call yourself a Professional Biologist, you must be a registered member of the Alberta Society of Professional Biologists (ASPB). You do **not** have to be registered with ASPB if you do not call yourself a Professional Biologist.

Employment and Advancement

(section revised JANUARY 2006)

Ecologists are employed by the following types of organizations:

- provincial and federal governments
- universities and colleges
- research institutions
- conservation organizations
- environmental consulting firms
- large private corporations such as manufacturers of agricultural products, forestry companies, paper manufacturers, and oil and gas companies.

Corporations employ ecologists to help them safeguard supplies of raw materials, make sure their operations comply with government regulations, and monitor processes and products.

Related summer work experience or volunteer experience is a definite asset when university graduates are looking for work. Entry-level positions are often short-term contract positions.

Those who have bachelor's degrees may be hired for non-research positions that involve conducting laboratory tests or inspections, or collecting routine field data. Advancement opportunities are limited for ecologists who have only a bachelor's degree. Some take further education to become high school teachers (for more information, see the Secondary School Teacher occupational profile). A doctoral degree usually is required for university and independent research positions, and may be required for advancement to senior management positions.

Ecologists are part of the larger National Occupational Classification 2121: Biologists and Related Scientists. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Public Administration**
- **Health Care and Social Assistance.**

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- time of year (for seasonal jobs)
- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 1,100 Albertans are employed in the Biologists and Related Scientists occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since ecologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for ecologists.) Specialists concerned with conservation biology, toxic waste, air quality and water quality are expected to be in greatest demand.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for ecologists vary depending on their educational qualifications, experience and specific field of study.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Biologists occupational group working part-time or full-time earned from **$29,400 to $103,200 a year.** The average salary was **$64,800 a year.**

Economist

Produced NOVEMBER 2005

Economists conduct research, analyze economic information and prepare reports and plans that are used to analyze various economies and economic problems, forecast and anticipate future problems and opportunities and offer ideas for solutions and new initiatives.

NOC Number(s): 4162
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M D

Duties

In general, economists:

- devise systems for collecting economic and statistical data regarding economic resources, how those resources are utilized, and the production and distribution of goods and services
- develop models for projecting economic and related activities
- compile, analyze and interpret results from a wide range of economic data and activity
- help others interpret economic data
- write reports to inform policy development and decision-making in government or business.

The work is essentially interpretive and analytical in nature, with an increasing emphasis on analyzing and comparing data from other economies as well as Canada's economy, and on evaluating the costs and benefits associated with alternative courses of action. Specific duties vary depending on the economist's area of specialization and employer.

Economists may specialize in various areas, including money and banking, consumer economics, financial economics, public finance, monetary and fiscal policy, international trade and finance, industrial organization, natural resource or environmental economics, health, labour, urban and regional, or agricultural economics.

Agricultural and natural resource/environmental economists work for government, industry or industry associations, often specializing in a particular or closely related group of resource commodities. In general, they:

- monitor and analyze trends in prices, supplies and demand, including the impact of economic activity and regulatory changes on particular commodities
- estimate the non-market benefits and costs associated with the use of natural resources
- forecast future prices and supplies, crop sizes and the effects of various policies.

Econometricians specialize in a branch of economics that relies primarily on statistics, mathematics and economic theory to develop, among other things, methods of forecasting economic variables and explaining economic behaviour. They usually work for government or large business firms. In general, they:

- use complex mathematical models of the economy for the purpose of analyzing and forecasting key economic variables
- produce forecasts of particular economic parameters which can be used for study, analysis, policy development and decision-making.

Financial economists work for government, banks, investment firms, insurance companies and other financial institutions. Large industries often employ economists interested in macroeconomics, money and banking, and domestic and international finance. In general, financial economists:

- study overall economic, financial and monetary conditions to analyze economic activity and forecast trends
- monitor and analyze factors affecting the money supply; stock, bond and other financial markets; the movement of interest, inflation and exchange rates; and other money market developments
- provide advice on the financing of capital requirements and the placing of investments.

Government-employed economists usually work in specialized areas in federal, provincial and municipal government departments, particularly in treasury and finance departments. In general, they:

- perform cost-benefit analyses to determine how tax dollars should be spent to maximize the benefits to taxpayers (especially for capital projects)
- study employment, inflation, tax policy, tariff and trade policies, specific industries, energy and environmental policies, social programs and assessment of the need for policy change and, if required, potential alternatives
- monitor social and political trends and policies, and their impact on the economy.

Industrial/business economists typically work for large businesses and major industrial enterprises and, in general:

- provide and interpret data on economic conditions and trends to assist management in making marketing decisions and analyzing production and investment alternatives
- study regional and national economic activity, foreign trade and capital flows, and capital markets
- perform cost-benefit analyses and feasibility studies for industrial projects,
- analyze the effects of government policies and regulations and international agreements on business
- advise management regarding business strategies.

Labour/industrial-relations economists work for unions, associations, employers and governments and, in general:

- study labour supply and demand, wages and hours of work, cost of living, labour market discrimination and worker productivity
- study the effect of labour legislation, unemployment insurance, industrial accident provisions, welfare plans, education, collective bargaining, trade unions and industrial factors on the labour force and the economy
- recommend ways to improve arbitration and conciliation techniques for settling labour disputes.

University and college economists usually:

- teach courses in economics, finance and business
- conduct research to improve understanding of how the economy works and the behaviour of stakeholder groups in the economy
- publish their findings for review, analysis and use by others.

Working Conditions

Economists work in office environments, often using computers and large databases to compile and analyze data. Some work from offices in their homes.

Working conditions can vary significantly over the course of the year. When key decisions are pending or economic events are affecting business or government, economists may work long hours, under pressure, to provide accurate, timely analyses.

Personal Characteristics

Economists need the following characteristics:

- strong mathematical, statistical and analytical skills
- an interest in current affairs
- an above-average ability to use plain language to express complex ideas, in person and on paper.

They should enjoy developing innovative methods and economic models, analyzing information and making economic forecasts, advising others, finding solutions to problems and being part of decision-making in government and business activities.

Educational Requirements

An honours bachelor's degree in economics is sufficient for research assistant positions. A Master of Arts (MA) degree in economics is usually required to become a professional economist. Teaching positions at the post-secondary level require a doctoral (PhD) degree.

Admission to master's degree programs requires an acceptable average in the last two years of a related four year bachelor's degree program (preferably, an honours program).

In Alberta, the following post-secondary institutions offer four year degree programs in economics:

- **The King's University College** in Edmonton offers a four year Bachelor of Arts (BA) degree program in Politics, History and Economics. The entrance requirement is an average of at least 60 per cent in English Langauge Arts 30-1 (or English 30) and four other appropriate Grade 12 subjects.

- The **University of Alberta** in Edmonton offers four year Bachelor of Arts (BA) and BA (Honours) programs in Economics. The entrance requirement is a competitive average (65 to 85 per cent) in English Language Arts 30-1 (or English 30), a 30 level language other than English or Pure Math 30 (or Math 30), and three other appropriate 30 level subjects (Social Studies 30 and Math 31 recommended). The University also offers master's and doctoral degree programs in Economics in Edmonton and bachelor degree programs in Camrose.
- The **University of Calgary** offers four year BA and BA (Honours) programs and a five year co-op BA program in Economics. The entrance requirement is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30 or 31) and three of the following: Biology 30, Chemistry 3, Physics 30, Science 30, Social Studies 30, a 30 level language other than English, one five-credit Grade 12 subject. The University also offers a BA in Economics and Society program, and master's and doctoral degree programs in Economics.
- The **University of Lethbridge** offers four year BA and five year combined degree programs in Economics. The entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 (or Math 30, or equivalent), two other appropriate 30 level subjects, and a fifth Grade 12 subject.

For information about Bachelor of Commerce and Bachelor of Management degree programs in finance, see the Investment Advisor occupational profile. For information about agriculture-related programs including agricultural economics, see the Agrologist occupational profile.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Economists work in many sectors of the economy but are usually employed by:

- large organizations in finance, business and industry
- universities and colleges
- municipal, provincial and federal governments and crown corporations
- private consulting firms
- large international organizations such as the World Bank and the International Monetary Fund.

Many economists are employed as economic consultants to advise business, industry, government, labour and others. Some economists work for consulting firms; others are self-employed.

Economists are part of the larger National Occupational Classification 4162: Economists and Economic Policy Researchers and Analysts. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Public Administration**
- **Oil and Gas Extraction**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 750 Albertans are employed in the Economists and Economic Policy Researchers and Analysts occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since economists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for economists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries vary considerably in this occupation. Economists often earn more after promotion to managerial positions.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Economists and Economic Policy Researchers and Analysts occupational group working part-time or full-time earned from **$27,600 to $109,100 a year.** The average salary was **$58,800 a year.**

Editor

Produced JULY 2005

Editors help writers, publishers and others prepare written text that is accurate, appealing and effective for publication or broadcast.

NOC Number(s): 5122
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D I S**

Duties

Editors often have supervisory and project management responsibilities in addition to editorial responsibilities in the book, magazine or newspaper publishing industry or the broadcast industry. They also may do freelance work for non-traditional publishers such as website developers, government departments and large corporations that produce annual reports, press releases, educational texts, journals and newsletters.

Book editors may acquire new books for publication with their publishing companies or supervise the progress of literary works from manuscript to printed book. Editors responsible for acquiring new books for publication (often called acquisitions editors):

- contact and interview prospective authors of fiction and nonfiction works
- develop story or content ideas and solicit manuscripts
- evaluate submitted manuscripts
- make recommendations to the publisher
- negotiate contracts with authors or authors' agents.

Editors who supervise the progress of an author's work (often called developmental editors) may:

- consult with the writer
- conduct their own research on the topic
- arrange for copyright permissions
- locate and hire designers and illustrators
- hire another editor on a contract basis to check content, style, organization and grammar, and edit the manuscript in consultation with the author
- hire proofreaders and, when necessary, indexers
- make arrangements for printing
- keep the project within a predetermined timeline and budget.

Newspaper editors' job titles are generally related to their position in a hierarchy of editors or to the topic areas for which they are responsible. Copy editors:

- write headlines
- co-ordinate or do page layouts
- edit written text to make it concise and readable
- correct errors in spelling, grammar, punctuation and style
- check for potentially libellous content, good taste, accuracy, fairness and balance in each story.

City editors responsible for local news coverage:

- assign reporters to cover stories in the community
- gather information about stories via telephone, wire, e-mail, radio, television, press releases, reporters or their own initiative.

Newspaper editors in other areas supervise reporters covering topics such as sports, business, entertainment, fashion, food, photography, design and graphics.

Managing editors and news editors:

- organize production according to strict deadlines
- make decisions about the value and relevance of proposed articles and allot space accordingly
- plan the thrust and emphasis of news coverage with news staff
- assess news at international, national, provincial and municipal levels (assisted by wire editors who monitor news reports from other parts of the country and world)
- check and edit news content for accuracy of style
- make the final selection of and assign priorities to stories and photos
- maintain the newspaper's budget by controlling hiring, promotions and salaries.

In addition to being responsible for everything in the news and comment columns, the editor-in-chief:

- works with the publisher to write and administer policies
- supervises and co-ordinates the work of other editors.

Magazine editors have responsibilities similar to those of book and newspaper editors but most magazines do not employ large numbers of editors. Small magazines may have one or two editors. They may:

- determine the style of the magazine
- plan content by suggesting story ideas weeks or months in advance
- negotiate writers' fees
- assign projects to staff writers or hire freelance wrtiers to research and write pieces
- ensure that deadlines are met
- write articles and editorials
- oversee art directors, proofreaders, fact checkers and photographers
- proofread galleys (proofs made from type before it is arranged in a page format)
- dummy the magazine (prepare a rough mock-up of the entire magazine) to establish the general layout of articles and advertising.

Freelance editors are hired by governments, businesses and other organizations to produce newsletters, bulletins, website content, magazines, training programs, texts and research studies. They may:

- conduct research
- write and rewrite copy
- supervise an author's work
- evaluate manuscripts
- edit copy for content, style and punctuation
- update written texts or revise texts to suit different audiences
- oversee the artwork, layout, word processing and printing
- index and proofread.

Broadcast editors prepare copy for news announcers on radio and television. In general, they:

- help reporters write copy in a conversational style
- assign reporters to cover events
- select teletype news and taped world news.

Working Conditions

Editors often work long, irregular hours with overtime required to meet deadlines. Some newspaper editors work from 3 to 11 p.m., others work day shifts.

Depending on the industry in which they work, editors may spend most of their day alone, with many different people, or with one or two people. Newspaper editors work in loud and hectic surroundings. Book and freelance editors may work at home because editing manuscripts requires privacy and quiet.

Personal Characteristics

Editors need the following characteristics:

- curiosity and ambition
- excellent writing and research skills
- the ability to criticize effectively
- organization and time management skills
- decision-making and leadership skills

- the ability to work well under time pressure.

They should enjoy planning and co-ordinating the work of others, analyzing information and solving problems, and negotiating with writers and others.

Educational Requirements

A variety of backgrounds can qualify a person to work as an editor but **most editors have a university degree**. A liberal arts education focusing on English (particularly useful for book editing) or journalism, political science, economics, psychology, history and philosophy is recommended. A working knowledge of media law, and word-processing and publishing programs is recommended.

Some editors need specialized knowledge in addition to writing and editing skills. For example, editors in the technical textbook industry may need related post-secondary education in a scientific or technological field.

In Alberta, most-secondary institutions offer liberal arts degree programs. The following institutions offer programs specifically in communications or writing:

- **Athabasca University** offers a two year Bachelor of Professional Arts degree program in Communications Studies by distance education. Applicants must hold a two or three year diploma in a related field.
- **Grant MacEwan College** in Edmonton offers a four year Bachelor of Applied Communications in Professional Writing degree program. The entrance requirement is a high school diploma with an average of at least 65 per cent in English Language Arts 30-1 (or English 30), a 30 level language other than English or Pure Math 30 (or equivalent) and three other Grade 12 courses selected from specified groups.
- **Lethbridge Community College** offers a two year Communication Arts diploma program. The entrance requirement is a high school diploma with at least 60 per cent in English Language Arts 30-1 (or 70 per cent in English Language Arts 30-2, or equivalent) and Social Studies 30.
- **Mount Royal College** in Calgary offers a four year Bachelor of Applied Communications degree program. The entrance requirement is an average of at least 60 per cent in English Language Arts 30-1 (or equivalent), Social Studies 30 and three other appropriate Grade 12 subjects.
- the **University of Alberta** in Edmonton offers a Master of Arts Communications and Technology degree program. The entrance requirement is a suitable Bachelor's degree with a minimum Grade Point Average (GPA) of 3.0/4 and three years of professional work experience. The University of Alberta also offers a Writing program through the Faculty of Extension.
- the **University of Calgary** offers a four year Bachelor of Arts degree program in Communications Studies. The entrance requirement is an average of at least 60 per cent in English 30 (or equivalent); Pure Math 30, Applied Math 30 or Math 31; and three of the following: Biology 30, Chemistry 30, Physics 30, Social Studies 30, Science 30, a 30 level language other than English, one five credit Grade 12 subject.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of college course work toward university Bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Individual courses and occasional workshops in editing are offered by post-secondary institutions and organizations such as:

- the **Banff Centre School of Fine Arts**
- the **Editors' Association of Canada**
- the **Canadian Newspaper Association**
- the **Alberta Weekly Newspapers Association**.

Newspaper editors must have several years of experience reporting or writing. For information about these occupations and related education programs, see the Creative Writer, Reporter and Technical Writer occupational profiles.

Many copy editors need to be familiar with publishing and printing systems and technologies.

Employment and Advancement

(section revised JANUARY 2006)

Competition for editorial positions is keen and most editorial posts go to qualified people who already work in the field. Skilled freelance editors who have access to modern communication technology may work for organizations all over the world. They must purchase their own equipment and supplies, and manage all aspects of their businesses (e.g. marketing, accounting).

Most magazine publishing companies in Alberta hire only a few editors. Literary magazines are usually edited part-time by English professors or interested volunteers.

Prospective book editors should be willing to work on a freelance basis or take an entry level position in a publishing firm (in publicity or promotion production, or rights and permissions). When an assistant editor's job becomes vacant, people who have publishing experience and a related degree have a much better chance of being hired than those who do not have experience in a publishing office.

Promotions in the newspaper business typically involve more supervisory responsibilities. For example, a copy editor may become a section editor or be promoted to an assistant city editor position. The opportunity to work at a larger newspaper is often seen as a promotion. For example, many weekly newspaper editors move into junior daily positions. Occasionally, an editor may move from newspapers to magazines or the broadcast media.

In Alberta, over 75 per cent of people employed as editors work in the following industries:

- **Information, Culture and Recreation**
- **Management, Administrative and Other Support Services**
- **Professional and Technical Services**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,350 Albertans are employed in the Editors occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 30 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Editors occupational group working part-time or full-time earned from **$18,700 to $87,700 a year.** The average salary was **$41,100 a year.**

Educational Assistant

Produced JANUARY 2006

Educational assistants help teachers with many time-consuming instructional and non-instructional tasks.

NOC Number(s): 6472
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S M i**

Duties

Educational assistants are employed by schools, child care centres and other educational organizations to provide learning support to students and general support to teachers and other professionals. In a school setting, educational assistants may:

- work under the supervision of one or several teachers
- work with children who have special needs
- work independently with students or in the classroom
- work as part of a multidisciplinary team
- assist with playground supervision
- perform clerical tasks as required.

Specific duties vary from one position to another but, in general, educational assistants:

- implement lesson and behavioural plans for individual students with special needs
- motivate and encourage students to participate in learning activities
- use effective instructional techniques to help students with lessons and assignments
- demonstrate activities, set up and dismantle displays, play areas and work areas
- observe and report student behaviour and progress
- assist students who have special needs with personal care
- facilitate and encourage positive student behaviours
- correct homework and tests, administer oral tests or act as a scribe for students
- collect and prepare learning materials and use technology (for example, computers, audio-visual equipment) to support student learning
- assist with special events and activities
- perform related tasks such as photocopying and laminating materials, completing attendance, health and behavioural reports, updating student records, collecting money from students for school-related projects or helping in the school library
- may supervise children during lunch and recess breaks or field trips.

Working Conditions

Educational assistants work indoors except when supervising children outdoors or going on field trips. They may be required to routinely lift items weighing up to 10 kilograms. Sometimes, heavier lifting may be required (for example, to help children move in and out of wheelchairs).

Educational assistants employed in school systems usually have the same holiday schedule as teachers including summer, winter and spring breaks. However, they work on a contract basis and therefore are not paid during the summer months. Hours of work may include some after school hours to attend staff or committee meetings.

Educational assistants employed in the private sector may be employed the full calendar year.

Personal Characteristics

Educational assistants need the following characteristics:

- good health and physical fitness
- the ability to deal with the emotional and mental stress of working with groups of children who are often active and demanding
- the ability to interact with students and staff in a tactful, empathetic manner
- good speaking and writing skills
- the ability to take direction and work independently as well as in a team environment
- good observation skills
- the ability to keep student information confidential
- a positive attitude
- flexibility, patience, sensitivity, tolerance, enthusiasm, creativity and imagination.

They should enjoy working with people (especially children who have physical, emotional or behavioural disabilities), having clear rules and guidelines for their work, and finding innovative ways to handle situations.

Educational Requirements

Employers generally prefer to hire educational assistants who have a high school diploma and related post-secondary education. A first aid certificate and criminal record check also may be required. Related experience is a definite asset.

In Alberta, educational or teacher assistant training programs are offered at the following post-secondary institutions:

- **Bow Valley College** in Calgary offers a 36 week Educational Assistant certificate program. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), or equivalent.
- **Columbia College**, a private vocational school in Calgary, offers full-time (25 weeks) and part-time (50 weeks) Human Services Professional certificate programs. The entrance requirement is a high school diploma with a 60 per cent average, or equivalent.
- **Grande Prairie Regional College** offers a one year (9.5 months) Teacher Assistant certificate program. Applicants must be at least 18 years of age and have a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), or equivalent. Applicants also must have a current CPR certificate (Basic Rescuer) and Standard First Aid Certificate. Students can take this program on a full-time or part-time basis. Some courses are offered on-line.
- **Grant MacEwan College** in Edmonton offers a 10 month Special Needs Educational Assistant certificate program that is also available on a part-time evening basis and by distance delivery. Applicants must have a high school diploma with at least 65 per cent in English Language Arts 30-1 or English 30 (or 75 per cent in ELA 30-2 or English 33), submit two letters of reference, complete a career profile and attend a program information session. Outreach courses are offered in communities throughout Northern Alberta on a part-time basis.
- **Keyano College** in Fort McMurray offers a one year (9.5 months) Educational Assistant certificate program that may be taken full-time or part-time. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), or equivalent.
- **Lakeland College** in Vermilion offers a one year Teacher Assistant certificate program. Entrance requirements include English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33) and Pure or Applied Math 10, or equivalent. Evening courses are offered on a part-time basis in Lloydminster and Strathcona County.
- **Lethbridge Community College** offers a one year Educational Assistant certificate program full-time and part-time evenings and weekends. The entrance requirement is a high school diploma with at least 60 per cent in English Language Arts 30-1 or ELA 30-2, or equivalent. Some courses are available by electronic or print-based distance education.
- **Medicine Hat College** offers a:
    - one year Education Assistant certificate program in Brooks and Medicine Hat. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), or equivalent.
    - one year Educational Support Services diploma program in Medicine Hat. The entrance requirement is an Education Assistant certificate or a diploma or degree in a related field of study such as Child and Youth Care, Social Work or Education.
- **Northern Lakes College** offers a one year Teacher Assistant certificate program in Grouard, Slave Lake and various locations via CentaOne onsite. Entrance requirements include English Language Arts 30-1 or English 30

(or 60 per cent in ELA 30-2 or English 33) and Applied Math 10, or equivalent. There are two compulsory practicums in this program.

- **Portage College** in Lac La Biche offers one year certificate and two year diploma Educational Assistant programs. The entrance requirement for both programs is Grade 12 or equivalent including English Language Arts 30-1 or 30-2, or English 30 or 33. Part-time and independent study courses are available throughout northeastern Alberta.
- **Red Deer College** offers a one year Educational Assistant certificate program that is also available by distance education. The entrance requirement is a high school diploma with English Language Arts 30-1 or English 30 (or 65 per cent in ELA 30-2 or English 33), or equivalent.
- The **University of Calgary** offers part-time certificate programs designed for people who are currently working as educational assistants or have related experience.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Educational assistants may work full-time or part-time in:

- public, separate and private schools
- child care centres
- home schooling environments
- parent link, native liaison or other social services in which educational programming is offered.

Advancement requires further education.

In Alberta, most educational assistants work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 10,350 Albertans are employed in the Elementary and Secondary School Teacher Assistants occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 130 to 240 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for educational assistant positions vary widely throughout the province.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Elementary and Secondary School Teacher Assistants group working part-time or full-time earned from **$9,200 to $36,500 a year.** The average salary was **$25,000 a year.**

Educational Counsellor

Produced JANUARY 2006

Educational counsellors advise students on educational, personal and career-related issues and co-ordinate counselling services for students, parents and teachers.

NOC Number(s): 4143
Minimum Education: 6 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I d**

Duties

Educational counsellors include **school guidance counsellors** who work in elementary, junior and senior high schools, and **university and college counsellors** who work in post-secondary institutions such as universities, colleges and technical institutes.

Educational counsellors work with individual students and groups of students. In general, they:

- counsel students who are experiencing personal, social or behavioral problems
- provide career or vocational counselling services which may include administering tests and inventories to help students identify their interests, aptitudes and abilities
- collect and make available a wide range of educational and occupational information (for example, information about awards, scholarships and financial assistance programs)
- establish and supervise peer counselling and peer tutoring programs
- act as a resource for teachers and faculty members involved in helping students or graduates identify and pursue employment opportunities
- present self-help or information sessions on subjects related to education and career planning
- help students improve their study habits
- assist students interested in travel and study programs
- refer students to appropriate services and agencies when required.

School guidance counsellors also help students select appropriate courses, schedule subjects and choose educational programs. They may have additional teaching duties.

Counsellors in secondary and post-secondary institutions may supervise work experience programs for students.

Educational counsellors work closely with a variety of other professionals. School guidance counsellors work with teachers, speech therapists, school psychologists, social workers and public health nurses. University and college counsellors work co-operatively with instructors and personnel from the Registrar's Office, work experience programs and placement services.

Working Conditions

Educational counsellors usually work standard school or office hours but may spend additional evening and weekend hours supervising extra-curricular activities or attending meetings. They usually work in office and classroom environments. The work can be emotionally demanding and stressful, particularly when caseloads are high.

Personal Characteristics

Educational counsellors need the following characteristics:

- a genuine interest in helping people resolve their problems
- good verbal and written communications skills
- the ability to listen and comprehend with empathy and understanding, without prejudice or judgment
- excellent interpersonal skills
- the creative ability required to develop new programs or ways of doing things

- good organizational skills
- a tolerance for ambiguity and an ability to adapt to change quickly.

They should enjoy counselling students, co-ordinating information and developing innovative approaches to problems, and administering and interpreting standardized tests.

Educational Requirements

Educational counsellors need a **master's degree** in educational psychology, applied psychology or counselling.

In Alberta, the following institutions offer related master's degree programs.

- The **Campus Alberta Graduate Program in Counselling**, a tri-university partnership of Athabasca University, the University of Calgary and the University of Lethbridge, offers a Master of Counselling degree program with a specialization in school counselling. The entrance requirement is a minimum grade point average (GPA) of 3.00/4 in the last ten full-course equivalents of a four year bachelor's degree program that includes specified courses in psychology or educational psychology and a counselling skills course, or equivalent.
- **Athabasca University** offers a Master of Couselling degree program with specializations in counselling psychology and school counselling.
- **University of Alberta** in Edmonton offers a Master of Education degree program in educational psychology. In addition to a 3.0 GPA in the last two undergraduate years, a valid teaching certificate and teaching experience are required.
- **University of Calgary** offers Master of Education and Master of Science degree programs in applied psychology with a specialization in counselling psychology.
- **University of Lethbridge** offers an M.Ed. program with a specialization in counselling psychology.

Post-secondary institutions throughout Alberta offer suitable four year bachelor's degree programs and university transfer programs. Entrance requirements vary but, in general, include a high school diploma with a competitive average ranging from 60 to 80 per cent (depending on the program) in English Language Arts 30-1 (or English 30) and four other approved or specified Grade 12 subjects (for example, Social Studies 30, a 30 level language other than English, a 30 level math and/or science courses). Admission to Athabasca University is open to residents of Canada who are at least 18 years of age.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Educational counsellors who have related master's degrees may become chartered psychologists (for more information, see the Psychologist profile.)

Employment and Advancement

Educational counsellors work for:

- schools and post-secondary institutions
- correctional facilities
- government agencies
- private practices.

Advancement opportunities to administrative positions vary depending on the size and nature of the employing organization, and the counsellor's qualifications.

In Alberta, most people employed as educational counsellors work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,700 Albertans are employed in the Educational Counsellors occupational group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 40 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Salaries for educational counsellors vary considerably depending on the employing organization and the counsellor's qualifications.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Educational Counsellors occupational group earned **up to $84,700 per year.** Those with three years of experience earned from **$25,400 to $54,200**.

Counsellors who have teaching certificates are paid according to the same salary grid as elementary and secondary school teachers in their school jurisdictions.

Electrical Contractor

Produced FEBRUARY 2004

Electrical contractors erect or install electrical installations or equipment. They may also repair, service or maintain electrical installations or equipment.

NOC Number(s): 7212
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **D i o**

Duties

Electrical contractors apply for and obtain permits for electrical work. They may do various types of electrical work or specialize in particular types of projects:

- residential (eg. houses, condominiums, apartment buildings)
- commercial (eg. office buildings, shopping malls)
- institutional (eg. schools, hospitals, government funded projects)
- industrial (eg. refineries, factories).

Duties and responsibilities vary from one position to another but, in general, electrical contractors:

- negotiate project requirements with customers
- estimate material, equipment, labour and other costs
- prepare bids for the electrical work involved in construction projects
- negotiate contract terms with clients
- plan and schedule the work
- purchase materials
- hire and supervise electricians and apprentices
- negotiate with unions and other parties
- track progress and ensure compliance with architectural plans, blueprints, safety codes and other specifications
- co-ordinate activities with other construction managers
- ensure that projects are completed on schedule and within budget
- prepare progress reports for clients
- prepare invoices and manage receivables.

Electrical contractors usually have a skeleton crew of employees and hire additional help as needed.

Working Conditions

Working conditions on construction sites vary considerably from one site to another. Electrical contractors often work long, irregular hours to meet project deadlines. Some travel may be required to visit clients, job sites and suppliers.

On construction sites, electrical contractors must wear safety gear (eg. hard hat, safety boots) to reduce the risk of injury. Dealing with unexpected delays and unrealistic expectations, and collecting overdue payments can be stressful.

Personal Characteristics

Electrical contractors need the following characteristics:

- exceptional organizational skills
- good oral and written communication skills
- creative problem-solving skills
- leadership skills
- good negotiation skills.

They should enjoy directing and supervising the work of others, co-ordinating and scheduling activities and resolving problems, and applying their knowledge of electrical systems and equipment under demanding conditions.

Educational Requirements

Electrical contractors need related education and supervisory experience. They may be journeyman electricians or have post-secondary education in electrical engineering. For more information, see the Electrician, Electrical Engineering Technologist and Electrical Engineer occupational profiles.

The **Electrical Contractors Association of Alberta** offers a Professional Education Program that includes the following courses:

- Accounting Principles
- Business and Public Relations
- Assessing and Finalyzing the Tender
- Legal Implications
- Project Management
- Safety Principles.

Other Requirements

(section revised OCTOBER 2004)

Professional Electrical Contractor is a protected title under Alberta's Professional and Occupational Associations Registration Act and Professional Electrical Contractors Regulation. To call yourself a Professional Electrical Contractor, you must be registered with the Electrical Contractors Association of Alberta (ECAA). You do **not** have to be registered if you do not call yourself a Professional Electrical Contractor.

Employment and Advancement

(section revised JANUARY 2006)

Electrical contractors may be self-employed or employed by large general contracting companies. Advancement generally takes the form of building an increasingly successful business or being assigned larger, more complex projects.

Electrical contractors are part of the larger National Occupational Classification 7212: Contractors and Supervisors, Electrical Trades and Telecommunications Occupations. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Construction**
- **Information, Culture and Recreation**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 2,800 Albertans are employed in the Contractors and Supervisors, Electrical Trades and Telecommunications Occupations group which is expected to grow 1.0 to 2.0 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since electrical contractors form only a small part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for electrical contractors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Earnings for self-employed electrical contractors vary considerably from contractor to contractor and from year to year.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Contractors and Supervisors, Electrical Trades and Telecommunications Occupations group earned **up to $84,100 a year.** The average salary was **$62,800 a year**.

Electrical Engineer

Produced AUGUST 2004

Electrical engineers design, construct, analyze and test electrical and electronic components and systems, and are responsible for their safe operation.

NOC Number(s): 2133
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **I O D**

Duties

Electrical engineers work with systems that generate, transmit, distribute, store, control or use electromagnetic energy or electrically coded information. They may be involved in the development or manufacture of a wide variety of electrical and electronic devices, circuits, systems, products and equipment.

Electrical engineers may specialize in:

- biomedical engineering (e.g. medical imaging, intensive care monitoring)
- communications engineering (e.g. the compression, transmition, routing and reception of audio or video information)
- control systems engineering (e.g. the control of chemical processes such as those in petroleum extraction and refinement)
- digital systems engineering (e.g. the development of hardware systems for communications, process control, computers and signal processors)
- electronic materials and nanotechnology (e.g. the integration of semi-conductor devices and nanoscale sensors)
- electronics engineering (e.g. radio, television, navigational or automotive instrumentation)
- electromagnetics and photonics (e.g. radio frequency antennae and laser applications)
- power systems engineering (e.g. the generation, transmission and distribution of electrical energy).

In each of these fields, electrical engineers may further specialize in one or more of the following:

- maintaining and trouble-shooting existing systems
- conducting research
- designing systems
- designing electronic product prototypes (models)
- designing manufacutring processes
- developing test and quality control procedures to ensure that products meet quality specifications and safety standards.

In addition to their technical responsibilities, electrical engineers often are required to:

- study design proposals, write reports and make recommendations regarding the design, development or manufacture of products and systems.
- prepare contract documents, including drawings and specifications, for the construction of projects.
- supervise and co-ordinate the work of others.

They must constantly update their knowledge and skills to keep up with advances in technology.

For information about those who specialize in computer engineering, see the Computer Engineer and Software Engineer occupational profiles.

Working Conditions

Electrical engineers generally work in an office environment but also may travel to construction sites or manufacturing facilities. They may work long hours and experience a great deal of pressure to meet deadlines and design standards. In some circumstances, electrical engineers may be exposed to chemical gasses or work in severe climate conditions.

Personal Characteristics

Electrical engineers need the following characteristics:

- natural curiosity and good observation skills
- analytical and problem-solving skills
- a strong aptitude for mathematics and science
- the ability to pay close attention to details
- persistence
- good organization and time management skills
- excellent oral and written communication skills
- the ability to work effectively in teams of people from varied backgrounds.

They should enjoy being innovative, doing work that requires precision, working independently and making decisions.

Educational Requirements

The minimum education requirement for electrical engineers is a **four year bachelor's degree in electrical engineering.**

In Alberta, two universities offer four year bachelor of science (B.Sc.) degree programs in electrical engineering:

- the **University of Alberta** in Edmonton
- the **University of Calgary**.

The admission requirement for the engineering programs at both universities is a high school diploma with a minimum average of 78 or 80 per cent in English 30, Pure Math 30, Math 31, Chemistry 30 and Physics 30.

Both universities also offer co-operative education or internship programs in which periods of academic study alternate with periods of planned work experience in industry. Students usually take five years to complete a co-operative or internship program.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

(section revised OCTOBER 2004)

Under Alberta's Engineering, Geological and Geophysical Professions Act, you must be a registered member of the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA) to practice as a Professional Engineer. You do **not** have to be registered if you work under the direct supervision of a Professional Engineer and do not call yourself a Professional Engineer.

Employment and Advancement

(section revised JANUARY 2006)

Electrical engineers may be employed by:

- consulting firms
- electrical utilities
- construction companies
- governments
- manufacturers of electrical equipment
- resource extraction and processing companies
- transportation companies
- communication companies (including telecommunication companies)
- health authorities
- universities and other research institutions.

Many engineers spend their entire careers in technical jobs. Some engineers become managers, administrators or sales representatives.

Electrical engineers are part of the larger National Occupational Classification 2133: Electrical and Electronics Engineers. In Alberta, over 75 per cent of people employed in this classification in the following industries:

- **Professional and Technical Services**
- **Other Manufacturing**
- **Information, Culture and Recreation**
- **Utilities**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,800 Albertans are employed in the Electrical and Electronics Engineers occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 90 to 140 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised SEPTEMBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electrical and Electronics Engineers occupational group working part-time or full-time earned from **$21,100 to $130,700 a year.** The average salary was **$75,100 a year.**

Electrical Engineering Technologist

Produced SEPTEMBER 2004

Electrical engineering technologists apply their knowledge and understanding of electrical theory in business, engineering and industry settings.

NOC Number(s): 2241.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: O I M

Duties

In general, electrical engineering technologists work as part of a team with other technologists and engineers to:

- design or modify drawings for electrical installations in residential, commercial and industrial buildings
- design or modify drawings for electrical transmission and distribution systems
- write electrical specifications for electrical designs and equipment
- oversee industrial networks and data communications
- manage electrical energy systems through load flow, power quality and energy management
- prepare project cost estimates from electrical drawings
- participate in project maintenance and risk management
- write and perform commissioning procedures for electrical installations
- install and maintain electrical control systems and industrial automation systems
- maintain electrical equipment such as switch gear, control circuits, transformers, motors, protective relays, variable speed drives and programmable logic controllers
- use computers to test and control electrical equipment, and perform specialized functions (e.g. designing electrical installations, determining the fault level of current, co-ordinating relays, completing a harmonic analysis of a feeder circuit).

Working Conditions

Many electrical engineering technologists work regular hours in engineering, consulting or sales offices. Others work shifts in industrial complexes, power generating facilities, laboratories or construction sites. They must follow safety procedures to avoid injury or death from electrical shock. Overtime may be required to meet deadlines.

In some jobs, medium lifting (up to 25 kilograms) is required.

Personal Characteristics

Electrical engineering technologists need the following characteristics:

- the ability to adapt to changes and adopt new ideas
- an aptitude for mathematics and science (especially physics)
- the analytical ability required to interpret plans and diagrams, trouble-shoot circuits and test materials and products
- the ability to identify and discriminate colours
- the ability to lead and work well with others as part of a team
- good oral and written communication skills.

They should enjoy working with tools, computers, instruments and machinery at tasks requiring precision, and taking a methodical approach to analyzing problems and finding innovative solutions.

Educational Requirements

The minimum educational requirement to work as an electrical engineering technologist is an appropriate **two year diploma of technology**. In Alberta, the following institutions offer programs in electrical engineering technology.

- **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Electrical Engineering Technology diploma program. The admission requirement is a high school diploma or equivalent with English 30 or 33, Pure Math 30 or Math 30 (or at least 60 per cent in Math 33) and one of Physics 30, Chemistry 30 or Science 30. Priority will be given to students entering with Pure Math 30. Applicants presenting Applied Math 30 will be assessed and may be required to upgrade.
- **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Electrical Engineering Technology diploma program. The admission requirement is a high school diploma or equivalent with English 30, English 33, English Language Arts 30-1 or ELA 30-2; Pure Math 30 or Math 30; and Physics 20 or Science 30.

A limited number of applicants are accepted to these programs each year and competition for admission is keen. For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs may be offered on an as needed basis.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Electrical engineering technologists work in areas such as:

- power systems and protection
- electrical design or field testing
- construction
- industrial automation
- industrial networks and communication
- energy systems (including alternative energy)
- electrical maintenance
- system operations
- metering
- energy management
- power quality
- lighting design
- programmable logic controllers
- technical sales.

They are employed by:

- electrical and electronic suppliers
- utility companies and industrial plants
- electrical and construction contractors
- engineering consulting firms
- manufacturers and distributors
- agencies for electrical industry de-regulation
- government and regulatory agencies
- building and industrial maintenance firms
- oil and gas companies.

Experienced electrical engineering technologists may advance to supervisory positions or establish their own businesses.

Electrical engineering technologists are part of the larger National Occupational Classification 2241: Electrical and Electronics Engineering Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Other Manufacturing**
- **Oil and Gas Extraction**
- **Public Administration**
- **Educational Services**
- **Management, Administrative and Other Support Services**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,500 Albertans are employed in the Electrical and Electronics Engineering Technologists and Technicians occupational group which is expected to grow 2.4 to 3.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since electrical engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for electrical engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for electrical engineering technologists vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electrical and Electronics Engineering Technologists occupational group working part-time or full-time earned from **$22,100 to $126,100 a year.** The average salary was **$74,400 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

Electrical Motor Systems Technician

Produced FEBRUARY 2006

Electrical motor systems technicians test, rebuild and repair electric motors, generators, transformers, controllers and related electrical and mechanical equipment used in commercial, industrial and institutional establishments.

NOC Number(s): 7333
Minimum Education: Apprenticeship Trade
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

Electrical motor systems technicians maintain the electric motors and related equipment used to power machinery and equipment in various establishments such as production plants and large businesses. In general, they:

- diagnose problems and dismantle electric motors, transformers, switchgear, electric welders, generators and other electrical and mechanical equipment for servicing, modification or repair
- remove and replace shafts, bearings, commutators and other components, referring to blueprints or service manuals as required
- wind and assemble various types of coils for electric motors or transformers and reinstall them
- balance armatures or rotors, weld and braze or solder electrical connections, and align and adjust parts to close tolerances to reassemble items.

Working Conditions

Electrical motor systems technicians primarily work indoors in large shops and production plants. Those who work for firms that contract their services to other organizations may remove and replace burned out motors on the customer's premises. Travel may be required to perform maintenance on equipment. Most electrical motor systems technicians work a 40-hour week with some overtime required when equipment breaks down.

Electrical motor systems technicians may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Electrical motor systems technicians need the following characteristics:

- good mechanical aptitude
- manual dexterity
- the ability to pay careful attention to detail.

They should enjoy doing precision work.

Educational Requirements

To work in Alberta, electrical motor systems technicians must be ONE of the following:

- registered apprentices
- certified journeymen
- working for an employer who is satisfied that they have the skills and knowledge expected of certified journeymen
- self-employed.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- must have at least Alberta Math 23 or Pure Math 20 or Applied Math 20 (or equivalent) or hold a certificate of completion of apprenticeship that is issued by any jurisdiction in Canada in a related electrical trade or pass an entrance exam

- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Good marks in math, physics, drafting and industrial arts are particularly important.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Electrical motor systems technician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered at being offered at the Southern Alberta Institute of Technology (SAIT) in Calgary.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Electrical motor systems technicians are employed by companies that repair and service electric appliances and equipment and by contractors in the field.

Electrical motor systems technicians may progress to positions that involve working with larger and more complicated electric motors, transformers, switchgear or other apparatus, or that involve testing and diagnosing problems to a greater extent. They may also advance to supervisory positions or set up their own contracting firms. Alberta certified journeyman electrical motor systems technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Electrical motor systems technicians are part of the larger National Occupational Classification 7333: Electrical Mechanics. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Repair, Maintenance, Personal and Other Services**
- **Construction**
- **Other Manufacturing**
- **Utilities**
- **Retail Trade**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 450 Albertans are employed in the Electrical Mechanics occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since electrical motor systems technicians form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for electrical motor systems technicians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice electrical motor systems technicians earn at least 55 per cent of the journeyman wage rate in their place of employment in the first year, 65 per cent in the second, 75 per cent in the third and 85 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$20 to $32 an hour plus benefits** (2004 estimate). It is common for journeymen to work an average of 15 per cent extra in paid overtime hours.

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Electrical Mechanics occupational group earned **up to $72,800 a year**. Those with three years of experience earned from **$35,400 to $58,200 a year.** The average salary was **$52,000 a year**.

Electrician

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Electricians install, alter, repair and maintain electrical systems designed to provide heat, light, power, control, signals or fire alarms for all types of buildings, structures and premises.

NOC Number(s): 7241, 7242
Minimum Education: Apprenticeship Trade - Grade 12
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O i m; O i m**

Duties

Duties vary from one position to another but, in general, electricians:

- read and interpret electrical, mechanical and architectural drawings and electrical code specifications to determine wiring layouts
- cut, thread, bend, assemble and install conduits and other types of electrical conductor enclosures and fittings
- pull wire through conduits and holes in walls and floors
- position, maintain and install distribution and control equipment such as switches, relays, circuit breaker panels and fuse enclosures
- install, replace, maintain and repair electrical systems and related electrical equipment
- install data cabling
- splice, join and connect wire to form circuits
- test circuits to ensure integrity and safety
- install and maintain fibre optic systems.

Some electricians may specialize in specific types of installations:

- residential (housing developments)
- commercial (office buildings)
- institutional (hospitals)
- industrial (plants, factories).

Electricians may specialize in construction, maintenance and other types of electrical work.

Working Conditions

Working conditions vary from one job to another. Electricians who work indoors may encounter anything from clean, open areas to dirty, cramped spaces. Those who work outdoors may have to work on scaffolds. They usually work a 40-hour, five-day work week with overtime when required. There is some risk of injury due to accidental electric shock.

Electricians may be required to lift items weighing up to 25 kilograms.

Personal Characteristics

Electricians need the following characteristics:

- good communication and reading skills
- an aptitude for math
- mechanical ability
- physical strength and stamina
- the ability to distinguish colours to work with colour-coded wiring
- the ability to work in high places
- the ability to get along well with co-workers
- the ability to keep up to date with changing technology
- creativity

- the ability to do precision work.

Those who install or maintain equipment in existing homes or businesses must also be neat and have good customer service skills.

Educational Requirements

To work in Alberta, electricians must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have an Alberta high school diploma with Math 20 or 23 or Pure Math 20 or Applied Math 20 and at least 10 credits in a high school science (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Courses in English, math and physics are particularly important.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training in the first three years and a minimum of 1,350 hours of on-the-job training and 12 weeks of technical training in the fourth. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Electrician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered:

- Keyano College in Fort McMurray at the main campus and by mobile delivery at the Suncor site
- Lakeland College in Vermilion
- Lethbridge Community College
- Medicine Hat College in Brooks
- the Northern Alberta Institute of Technology (NAIT) in Edmonton and Grande Prairie
- Red Deer College
- the Southern Alberta Institute of Technology (SAIT) in Calgary.

Lakeland College, Lethbridge Community College and NAIT also offer technical training by distance delivery.

Competency-Based Apprenticeship Training (CBAT) is also offered by Lakeland College, Lethbridge Community College, Medicine Hat College, NAIT and Red Deer College.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **Keyano College** in Fort McMurray offers a one year Electrical Engineering Technology transfer program. The second year is offered at SAIT. The entrance requirement is a high school diploma with English 30 or 30-1, Physics 30 and Math 30 or Pure Math 30 or equivalent.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Electrical Engineering Technology diploma program. The entrance requirement is a high school diploma or equivalent with English 30 or 33, one of Physics 30, Chemistry 30 and Science 30 and Pure Math 30 or successful completion of Transitional Mathematics 101 or at least 65 per cent in Algebra 35.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Electrical Engineering Technology diploma program. The entrance requirement is a high school diploma or equivalent with Pure Math 30 or Math 30, English 30 or 33 or English Language Arts 30-1 or 30-2, Physics 20 or Science 30.

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

Electricians are employed by construction and maintenance contractors, manufacturers, resource companies and other large organizations. Especially in construction, there may be no guarantee of permanent work.

Electricians may advance to positions such as foreman, superintendent, estimator or electrical inspector or start their own contracting businesses. Alberta certified journeyman electricians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Membership in a trade union is voluntary. However, some contractors employ only union people.

In Alberta, electricians are part of two larger National Occupational Classifications: 7241 Electricians (Except Industrial and Power System) and National Occupational Classification 7242 Industrial Electricians.

Over 75 per cent of people employed in the Electricians (Except Industrial and Power System) group work in the **Construction** industry.

Over 75 per cent of people employed in the Industrial Electricians group work in the following industries:

- **Construction**
- **Oil and Gas Extraction**
- **Transportation and Warehousing**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

About 10,650 Albertans are employed in the Electricians (Except Industrial and Power System) occupational group which is expected to grow 2.5 to 3.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 260 to 380 **new** positions will be created each year **in addition** to job openings created by employment turnover.

Over 3,550 Albertans are employed in the Industrial Electricians occupational group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 50 to 100 **new** positions will be created each year **in addition** to job openings created by employment turnover.

(**Note**: Since electricians form only a part of the larger occupational groups on which these forecasts are based, only a portion of the new positions created will be for electricians.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

Apprentice electricians earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 70 per cent in the third and 80 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$17 to $32 an hour plus benefits** (2004 estimate).

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the:

- Electricians (Except Industrial and Power System) occupational group earned from **$16,900 to $114,300 a year.** The average salary was **$63,400 a year**.
- Industrial Electricians occupational group earned from **$32,200 to $74,600 a year.** The average salary was **$61,300 a year**.

© Government of Alberta, Human Resources and Employment

Electrologist

Produced JANUARY 2004

Electrologists use a needle-type epilator to permanently remove unwanted hair.

NOC Number(s): 6482.3
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M S O**

Duties

Electrologists remove unwanted hair by introducing a fine sterilized needle into a hair follicle and transmitting a controlled pulse of electricity through the needle. This cauterizes and destroys the hair production area. The loosened hair is then removed with forceps. Since this is an invasive procedure, electrologists must follow the health standards and guidelines established by Alberta Health and Wellness.

Electrologists work with one client at a time. In general, they:

- discuss needs and preferences with clients and find out if they have any physical conditions which would make electrolysis inadvisable
- use an antiseptic to clean the skin area that has unwanted hair
- attach a sterilized needle inside a round-tipped probe to an electrolysis machine and postition a large magnifying glass or microscope
- insert the round-tipped probe into each follicle, activate a preset electrical current, withdraw the probe and remove the hair with forceps
- clean the skin again after treatment.

Each session usually takes from 15 minutes to several hours, depending on the client's tolerance for discomfort. The number of sessions required depends on the extent and nature of the unwanted hair.

When not working directly with clients, electrologists:

- sterilize forceps
- clean their equipment and work area
- keep records of services provided.

They may also be responsible for booking appointments and accepting payments.

Working Conditions

Electrologists work indoors in clean, quiet surroundings and usually wear uniforms or lab coats. They may work full-time or part-time. Saturday and evening work is often required.

Personal Characteristics

Electrologists need the following characteristics:

- good eyesight and steady hands and nerves
- a safety conscious and caring attitude
- the ability to put people at ease
- a neat, well-groomed appearance.

They should enjoy:

- taking a methodical approach to compiling information
- serving and assisting people
- using specialized tools and equipment.

Educational Requirements

(section revised DECEMBER 2005)

There are **no standard education requirements** for electrologists in Alberta. However, the Federation of Canadian Electrolysis Associations recommends that new entrants to the occupation take a training program in electrology that is at least 500 hours in length and conducted by qualified teachers who have a minimum of five years' experience working as electrologists.

In Alberta, the following private vocational schools offer training programs in electrology:

- **Alberta Academy of Aesthetics** in Edmonton
- **European Institute of Esthetics** in Edmonton
- **International Academy of Esthetics** in Sherwood Park.

Program content, length, cost and admission requirements vary. In general, the entrance requirement is a high school diploma or mature student status.

Prospective electrologists should discuss their career plans with practicing electrologists before enrolling in a training program.

Other Requirements

Electrologists must pass the Canadian Certified Electrologist (CCE) exam consisting of both a written and practical component to become members of the Electrolysis Society of Alberta (ESA).

ESA members who have two years of full-time experience (or three years of part-time experience) as electrologists may qualify for the designation Certified Professional Electrologist.

Employment and Advancement

(section revised JANUARY 2006)

Electrologists are employed, or work on a contract basis, in electrolysis studios and some beauty salons. Some electrologists own and operate their own studios. Most provide other esthetic services as well as electrolysis.

Advancement in this occupation generally takes the form of building a larger clientele.

Electrologists are part of the larger National Occupational Classification 6482: Estheticians, Electrologists and Related Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 3,350 Albertans are employed in the Estheticians, Electrologists and Related Occupations group which is expected to grow 0.5 to 1.5 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 10 to 60 **new** positions will be created each year **in addition** to job openings created by employment turnover. However, employment prospects are not as good for electrologists as they are for estheticians in general. Competition from salons offering other methods of hair removal is limiting growth in this occupation.

Salary

(section revised OCTOBER 2005)

Electrologists' overall earnings vary considerably depending on the location and the person's reputation. Daily earnings depend on the rates charged and number of treatments performed.

Electrologists may rent space in a beauty salon and keep their earnings separate from those of the salon, or they may be employed by the salon and be paid a basic salary plus commission. Those who operate their own shops must pay overhead costs (rent, utilities, etc.) from their earnings. They may earn very little in their first year of operation.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Estheticians, Electrologists and Related Occupations group working part-time or full-time earned from **$11,100 to $45,500 a year.** The average salary was **$19,600 a year.**

© Government of Alberta, Human Resources and Employment

Electroneurophysiology (ENP) Technologist

Produced NOVEMBER 2004

Electroneurophysiology (ENP) technologists use sensitive electronic diagnostic equipment to record and evaluate the electrical activity of patients' central and peripheral nervous systems to assist physicians in diagnosing diseases, injuries and abnormalities.

NOC Number(s): 3218.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Electroneurophysiology technologists use specialized diagnostic equipment to record and evaluate the electrical activity of the brain and nerves, and electrical activity resulting from stimulation of sensory pathways. They usually specialize in one of three areas:

- electromyography
- electroencephalography
- evoked potential.

Duties and responsibilities vary from one specialty to another but, in general, ENP technologists:

- prepare patients for neurodiagnostic testing by explaining the procedure
- obtain medical history information pertinent to the interpretation of test results
- apply electrodes to predetermined, measured locations on the patient's head or other parts of the body
- operate neurodiagnostic testing equipment
- provide care and assistance to patients during procedures
- prepare test results for interpretation by physicians
- maintain equipment and troubleshoot technical problems
- facilitate communication among health care professionals (e.g. biomedical engineering staff, physicians, nurses and unit clerks).

Experienced technologists also may assist in training ENP students.

Working Conditions

Electroneurophysiology technologists may work shifts or work standard weekday hours and be on call evenings and weekends. They spend much of their working time on their feet and may be required to do some bending and lifting to help very ill patients.

ENP technologists must follow standard security, electrical safety and infection control precautions. In some circumstances, they may be required to move equipment on portable carts to patients' bedsides in wards, intensive care units or operating rooms.

Personal Characteristics

Electroneurophysiology technologists need the following characteristics:

- maturity and emotional stability
- the ability to communicate understanding and reassurance to patients who may be afraid
- the ability to pay close attention to details
- the ability to work with little direct supervision.

They should enjoy using computers and electronic equipment to perform tasks requiring precision, having clear guidelines for their work and dealing with people.

Educational Requirements

No formal training program for electroneurophysiology technologists is offered in Alberta. However, some Alberta hospitals meet the requirements for training technologists set by the Canadian Board of Registration of Electroencephalograph Technologists (CBRET) and the **Board of Registration of Electromyography Technologists of Canada** (BRETC).

Usually, electromyography (EMG) technologists have completed post-secondary courses in anatomy, physiology or electronics before they are accepted for training on the job. For information about post-secondary programs that include related courses, see the Kinesiologist and Registered Nurse occupational profiles. Admission requirements vary but generally include a high school diploma with 30-level courses in English, math, sciences, social studies or a language other than English.

The **British Columbia Institute of Technology (BCIT)** in Burnaby, British Columbia offers a two year electrophysiology diploma program every second year beginning in September. The program combines classroom teaching with practicum experience. The entrance requirement is a high school diploma or equivalent education with courses in algebra, physics and chemistry. Graduates must take further training before they are eligible to take examinations conducted by CBRET for registration in electroencephalography (EEG) or BRETC for registration in electromyography (EMG).

Employment and Advancement

(section revised JANUARY 2006)

Electroneurophysiology technologists are employed in:

- acute care hospitals
- private clinics
- research labs
- specialized facilities such as epilepsy and sleep centres.

Registered ENP technologists may specialize in work such as monitoring brain function or spinal cord integrity during surgery (intraoperative monitoring) or recording physiological data while the patient is asleep (polysomnography).

ENP technologists are part of the larger National Occupational Classification 3218: Electroencephalographic and other Diagnostic Technologists. In Alberta, most people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 100 Albertans are employed in the Electroencephalographic and Other Diagnostic Technologists occupational group which is expected to grow 3.5 to 4.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since ENP technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for ENP technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electroencephalographic and other Diagnostic Technologists occupational group working part-time or full-time earned from **$44,700 to $58,100 a year.** The average salary was **$57,300 a year.**

In general, unregistered technologists receive 90 per cent of a registered technologist's salary. Private clinics may pay slightly lower salaries than hospitals.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Electronic Technician

Produced FEBRUARY 2006

Electronic technicians service and repair household and business electronic equipment such as radios and televisions, compact disc players and personal computer systems.

NOC Number(s): 2242
Minimum Education: Apprenticeship Trade - Grade 12
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O I M**

Duties

Some electronic technicians specialize in repairing particular types of equipment such as radio and television receivers, stereo components, video cameras, two-way radio communication systems, video and audio tape recorders, bio-medical systems, computer systems or security systems. Other technicians work with a variety of electronic equipment.

Duties vary from one position to another but, in general, electronic technicians:

- talk to customers and conduct routine checks to find the source of a malfunction
- inspect and test electronic equipment, components and assemblies using multi-meters, circuit testers, oscilloscopes, logic probes and other test equipment
- diagnose and locate circuit, component and equipment faults
- follow equipment manuals and drawings to adjust, align, replace or repair parts
- keep records such as work orders and test and maintenance reports
- access and distribute product information using electronic means such as e-mail, databases and the Internet.

Working Conditions

Electronic technicians generally work indoors. Some technicians travel to the customers' locations to make routine repairs and, if necessary, transport faulty equipment back to the shop. They work a 40-hour week with occasional overtime when required. Some may have to work some evenings or weekends for the customer's convenience.

Electronic technicians may be required to lift items over 25 kilograms.

Personal Characteristics

Electronic technicians need the following characteristics:

- good manual dexterity
- normal colour vision
- good customer service skills
- the ability to keep up to date with changing technology.

They should enjoy doing precise, detailed work and problem-solving with little direction.

Educational Requirements

To work in Alberta, electronic technicians must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have an Alberta Grade 12 education with a "B" standing in Math 20 or 23, Pure Math 20 or Applied Math 20 and Physics 20 (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Most employers prefer to hire high school graduates and may select apprentices from among their current employees. Demonstrated mechanical aptitude and mathematical ability are particularly important.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,500 hours of on-the-job training and eight weeks of technical training each year. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Electronic technician apprentices may attempt the Interprovincial Exam in the final period of their apprenticeship training and, if successful, are granted a Red Seal (which is recognized in most parts of Canada).

Technical training is arranged by Alberta Apprenticeship and Industry Training and is currently offered offered at the Northern Alberta Institute of Technology (NAIT) in Edmonton.

Outside the apprenticeship program, the following post-secondary institutions offer related training:

- **DeVry Institute of Technology**, a private vocational school in Calgary, offers a a 45-week Electronics and Network Technology diploma program, a 75-week Electronics Systems Technology program and a four year Electronics Engineering Technology degree program. The entrance requirement is a high school diploma or equivalent.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a one year Electronic Service Technician certificate program and a two year Electronics Engineering Technology diploma. The entrance requirement for the Electronic Service Technician program is a high school diploma or equivalent with English 30 or 33 and Pure Math 30 or Applied Math 30. The entrance requirement for the Electronics Engineering Technology diploma program is a high school diploma or equivalent with English 30 or 33, one of Physics 30, Chemistry 30 or Science 30 and Pure Math 30 or successful completion of Transitional Mathematics 101 or at least 65 per cent in Algebra 35.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Electronics Engineering Technology diploma program. The entrance requirement is an Alberta high school diploma or equivalent with Pure Math 30 or Math 30, English 30 or 33, English Language Arts 30-1 or 30-2 and a minimum 20 level science (Physics preferred).

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

For current information about programs and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

The Alberta Society of Engineering Technologists grants the designation Certified Technician (C.Tech.) to graduate technicians who meet the requirements for education and have two years of successful work experience in industry.

Employment and Advancement

Electronic technicians are employed by independent repair shops and large organizations that use communications equipment.

Experienced electronic technicians may set up their own businesses or advance to supervisory positions. Alberta certified journeyman electronic technicians who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

The employment outlook for radio and television repairers employed in the **Retail Trade** industry will continue to be limited by the introduction of products requiring less servicing. Most of the employment growth in this occupation will be created by the increasing use of computers in manufacturing and industry. Competition for training positions is keen and job applicants who already have training or experience in electronics will have an advantage.

Salary

Apprentice electronic technicians earn at least 50 per cent of the journeyman wage rate in their place of employment in the first year, 60 per cent in the second, 70 per cent in the third and 80 per cent in the fourth. According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$12 to $22 an hour plus benefits** (2004 estimate). Many shops pay electronic technicians on a commission rate (generally 40 per cent to 60 per cent of the total labour billing) instead of paying per hourly rate.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electronic Service Technicians (Household and Business Equipment) occupational group working part-time or full-time earned from **$14,200 to $81,100 a year.** The average salary was **$44,200 a year.**

Electronics Assemblers and Fabricators

Produced SEPTEMBER 2003

Electronics assemblers and fabricators mount, secure, interconnect and adjust parts and components to assemble and fabricate electronic equipment.

NOC Number(s): 9483.1
Minimum Education: Education/training requirements vary
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O M i**

Duties

Electronics assemblers and fabricators perform specific tasks required in manufacturing electronic products such as computer circuit boards, medical equipment, transmitters and receivers, automotive equipment and measuring devices. These tasks generally require working to very precise specifications.

Electronics assemblers put together electronic components, subassemblies, products or systems. They may:

- solder and manually place components such as resistors, diodes, transistors, capacitors, integrated circuits, wires and other electronic parts to designated locations on printed circuit boards
- assemble microcircuits requiring fine hand assembly
- install, mount, fasten, align and adjust parts, components, wiring and harnesses to subassemblies and assemblies using hand and small power tools
- operate automatic and semi-automatic machines to position, solder and clean components on printed circuit boards
- assemble mechanical parts into large enclosures, frames or shelves.

Electronics fabricators set up, operate and/or monitor process equipment including automatic and semi-automatic machines which fabricate, solder, clean, seal and stamp electronic components.

Working Conditions

Most electronics assemblers and fabricators work in assembly plants. Shift work may be required.

Where electronics assemblers also do mechanical assembly, some heavy lifting is required.

Personal Characteristics

Electronics assemblers and fabricators need the ability to:

- perform routine tasks with care and precision
- work at a steady, rapid pace
- distinguish colours used to identify wires and components
- learn new tasks reasonably quickly
- get along well with fellow employees in assembly plants.

They should enjoy operating equipment and performing tasks requiring precision, and having clear rules and organized methods for their work.

Educational Requirements

There are **no standard education requirements**; however, some employers prefer to hire high school graduates. A basic knowledge of electronics or experience in soldering and component identification are definite assets.

Courses in basic electronics are offered by high schools, private vocational schools, school board Continuing Education departments, technical institutes and colleges. Many courses are offered evenings and weekends. Course dates, times and locations are advertised in local newspapers.

Electronics assemblers and fabricators are **trained on the job**. Training periods range from one week to six months, depending on the complexity of the work and the worker's interest in learning more complicated tasks.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Employment and Advancement

(section revised JANUARY 2006)

Electronics assemblers and fabricators are employed by electronics manufacturers. Plants are usually located in or near major urban centres where there is ready access to parts, courier services and customers. Employees are often hired on a temporary basis to cover peak production periods and may be laid off when production requirements decrease. Some assemblers and fabricators are self-employed and work on a piece-work basis.

Experienced electronics assemblers and fabricators may advance to electronics inspector and electronics tester positions. Electronics inspectors check electronic components and assemblies for production faults and keep records of inspection results. Electronics testers use testing equipment to locate circuit and wiring faults and component defects, repair assemblies, compare test results to specifications and prepare reports.

Promotion to electronics tester positions may require some post-secondary training in basic electronic theory, testing techniques and testing equipment. Without further education, advancement opportunities beyond electronics testing and assembly line supervisory positions are limited.

Electronics assemblers and fabricators are part of the larger National Occupational Classification 9483: Electronics Assemblers, Fabricators, Inspectors and Testers. In Alberta, over 75 per cent of people employed in this classification work in the **Other Manufacturing** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Other Manufacturing industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,950 Albertans are employed in the Electronics Assemblers, Fabricators, Inspectors and Testers occupational group which is expected to grow 2.1 to 3.1 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 40 to 70 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since electronics assemblers and fabricators form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for electronics assemblers and fabricators.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Wages vary depending on the level of skill required, and the method of payment. Some assemblers are paid an hourly rate; others work on a piece work basis.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electronics Assemblers, Fabricators, Inspectors and Testers occupational group working part-time or full-time earned from **$18,700 to $60,500 a year.** The average salary was **$26,200 a year.**

Electronics Engineering Technologist

Produced SEPTEMBER 2004

Electronics engineering technologists apply the practical and theoretical principles of electronics to the development of electronic-based circuits, and the operation and servicing of electronic equipment and systems.

NOC Number(s): 2241.1
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus above average occupational growth in Alberta
Interests: **O I M**

Duties

Although there are many electronics disciplines, technologists usually specialize in one of the following areas:

- systems management
- electronic devices/systems design and manufacture
- technical sales and product representation
- research and development
- electronic systems/equipment installation, maintenance and repair.

In general, electronics engineering technologists:

- perform the technical functions involved in assembling, installing, repairing, maintaining, calibrating, prototyping and modifying electronic circuitry, components and systems
- assist in the production and quality control of electronic equipment and products
- assemble circuitry for electronic systems according to engineering instructions and technical manuals
- troubleshoot electronic instruments, equipment and systems using electronic test equipment
- replace defective components and parts using hand tools, precision instruments and other appropriate industrial maintenance procedures
- build prototypes (models) from rough sketches or plans
- perform acceptance and performance tests on newly designed components or systems
- educate users about the proper use of equipment
- consult with users to determine equipment needs and uses
- inspect newly installed equipment to adjust or correct any operating problems
- write software programs for microprocessors and computers
- use computers to plan, schedule and manage work functions
- write technical reports.

Technologists also may be required to prepare sketches, graphs and drawings that describe electronics systems and their characteristics. They work on many types of electronic equipment including:

- analogue and digital communication circuits and systems
- digital networks
- microprocessor controlled equipment and programmable logic controllers
- computers, computer-controlled equipment and computer networks
- radio and television broadcasting equipment
- telephone switching equipment, microwave, satellite and fibre optic communications sytems
- instrumentation (e.g. biomedical, oilfield, environmental)
- electronic sensors, circuits and systems involved with manufacturing processes (including nanofabrication)
- computers and electronic equipment used in the medical, manufacturing, industrial control, telecommunications, aeronautical or military fields.

Working Conditions

Electronics engineering technologists usually work indoors in offices, shops or production departments but may occasionally work outdoors in unsheltered environments. Some short distance travel may be required when installing or servicing equipment. They may be required to lift equipment weighing up to 25 kilograms.

Electronics engineering technologists often are members of teams working on particular projects. The intense concentration required and the pressure of deadlines can be stressful.

Personal Characteristics

Electronics engineering technologists need the following characteristics:

- good oral and written communication skills
- an aptitude for and interest in mathematics and science
- patience and persistence combined with good time management skills
- analytical and technical problem solving skills
- fine motor skills and good eye-hand co-ordination
- good colour vision
- the ability to work with a variety of people in a team
- the ability to work under pressure of deadlines
- a willingness to continuously update their education.

They should enjoy working with tools, equipment, instruments and machinery at tasks requiring precision; analyzing problems and finding innovative solutions; taking a methodical approach to their work and supervising others.

Educational Requirements

The minimum education requirement for electronics engineering technologists is a **related two year diploma of technology**.

- The **DeVry Institute of Technology,** a private vocational school in Calgary, offers a 75 week Electronic Systems Technology program and a four year Electronics Engineering Technology degree program. The entrance requirement for both programs is a high school diploma or equivalent.
- The **Northern Alberta Institute of Technology (NAIT)** in Edmonton offers a two year Electronics Engineering Technology diploma program. The minimum admission requirement is a high school diploma or equivalent with English 30 or 33, Pure Math 30 or Math 30 (or at least 60 per cent in Applied Math 30 or Math 33), and one of Science 30, Physics 30 or Chemistry 30. Normal colour vision is required. Priority will be given to students entering with Pure Math 30. Applicants presenting Applied Math 30 may be required to upgrade.
- The **Southern Alberta Institute of Technology (SAIT)** in Calgary offers a two year Electronics Engineering Technology diploma program. The minimum admission requirement is a high school diploma or equivalent with English 30 or 33, Pure Math 30 and a 20-level science. English 30 and Physics 30 or Science 30 are strongly recommended. Applicants must write placement tests in English and math.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Continuing education programs may be offered on an as needed basis.

Other Requirements

(section revised OCTOBER 2004)

Certification with the Alberta Society of Engineering Technologists (ASET) is voluntary.

Under Alberta's Engineering, Geological and Geophysical Professions Act, Registered Professional Technologists - Engineering must be ASET members to engage in a defined scope of engineering practice as registered by the Association of Professional Engineers, Geologists and Geophysicists of Alberta (APEGGA).

Employment and Advancement

(section revised JANUARY 2006)

Electronics engineering technologists are employed by:

- manufacturers, retailers and users of electronic equipment and components
- companies using computers, biomedical equipment, integrated circuits instrumentation and comunications devices
- energy, communication and industrial automation industries
- research and testing laboratories
- microelectronic and nanofabrication centres
- health care facilities
- environmental monitoring companies
- engineering consulting firms
- the Canadian Armed Forces.

There is an increasing demand for technologists to work in technical sales and customer relations, and to supervise technical personnel. These positions require excellent interpersonal and communication skills.

Electronics engineering technologists are part of the larger National Occupational Classification 2241: Electrical and Electronics Engineering Technologists and Technicians. In Alberta, over 75 per cent of people employed in this classification work in the following industries:

- **Professional and Technical Services**
- **Information, Culture and Recreation**
- **Other Manufacturing**
- **Oil and Gas Extraction**
- **Public Administration**
- **Educational Services**
- **Management, Administrative and Other Support Services**
- **Construction**.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the industries listed above)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 6,500 Albertans are employed in the Electrical and Electronics Engineering Technologists and Technicians occupational group which is expected to grow 2.4 to 3.4 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 150 to 230 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since electronics engineering technologists form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for electronics engineering technologists.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for electronics engineering technologists vary considerably.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Electrical and Electronics Engineering Technologists occupational group working part-time or full-time earned from **$22,100 to $126,100 a year.** The average salary was **$74,400 a year.**

For more detailed information, see ASET's Annual Salary Surveys.

Elementary School Teacher

Produced JANUARY 2006

Elementary school teachers teach and facilitate the learning of children ranging in age from four to 12 years in Kindergarten to Grade 6.

NOC Number(s): 4142
Minimum Education: 4 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **S I D**

Duties

In general, elementary school teachers:

- identify children's individual and collective learning needs
- plan and deliver instruction based on student learning needs and special needs
- provide a stimulating learning environment in which each child can experience growth and develop to potential
- help students learn appropriate knowledge, skills and attitudes
- use various assessment tools to evaluate and communicate student progress
- serve as role models for students.

Elementary classes vary in size and often include students who represent a broad range of abilities, interests and needs. A variety of instructional and assessment strategies are required to maintain student interest and maximize individual learning.

In addition, elementary teachers:

- meet with parents
- meet with other professionals to discuss individual student needs and progress
- organize and direct the work of teacher assistants and parent volunteers
- supervise extra-curricular and after-school activities
- attend meetings, seminars and in-service training sessions
- deal with children's crises such as forgotten lunches, minor scrapes, family emergencies or not being picked up as scheduled.

Most elementary teachers are responsible for a homeroom class of 20 to 33 children and teach most subjects. Some teachers team teach or teach music, second languages or physical education at different grade levels.

Elementary teachers who have specialized in Early Childhood Education are trained to work with children from kindergarten to Grade 3. These programs focus on the development of positive self-concepts in young children and include planning, organizing and providing a wide variety of experiences that foster understanding and use of language through:

- practical experiments, stories, discussions, songs, art, games and other exploratory learning activities
- listening experiences
- individual and group activities and projects.

Most kindergarten teachers in urban areas teach two different groups of children each day (one in the morning, one in the afternoon). In rural areas, kindergarten teachers often work in half-day or alternate full-day programs.

Many schools in Alberta offer language immersion/bilingual programs in Arabic, French, German, Hebrew, Mandarin, Polish, Spanish, Ukrainian, native and other languages. In addition, the number of non-English speaking immigrant children in the province has created a need for English as a Second Language (ESL) teachers. ESL classes are usually taught by elementary teachers who have completed related university course work.

Working Conditions

Teaching is a physically and emotionally demanding occupation. Much of the time teachers are on their feet interacting with children. Maintaining discipline in a classroom is a constant challenge especially when the class includes special needs children who have behavioural disorders.

Personal Characteristics

Elementary school teachers need the following characteristics:

- strong interpersonal and communication skills
- a genuine interest in children and respect for their individuality
- the ability to sense children's individual needs
- the ability to be creative, imaginative, patient, energetic, organized and resourceful
- the ability to establish rapport children and parents
- strong leadership and teamwork skills and a good sense of humour
- a high level of dedication to work which often impacts personal lifestyle choices
- a clear, pleasant speaking voice and the ability to convey confidence
- positive conflict resolution skills and the ability to handle stress well.

They should enjoy finding different ways to solve questions and present information, and organizing and co-ordinating the work of others.

Educational Requirements

In Alberta, the minimum qualification required to teach in an elementary school is four years of post-secondary education leading to a **bachelor of education (B.Ed.) degree**. The following post-secondary institutions offer B.Ed. degree programs.

- **Canadian University College** in Lacombe offers a four year B.Ed. program with a specialization in elementary education. The admission requirement is a high school diploma or equivalent with an average of at least 60 per cent in English Language Arts 30-1 (or English 30), Pure Math 30 and two other 30 level courses, preferably laboratory sciences.
- **Concordia University College of Alberta** in Edmonton offers a two year B.Ed. after-degree program in elementary education. The admission requirement is a bachelor's degree with a grade point average (GPA) of 2.3/4 on the most recently attempted 30 credits. The admission requirement for degree programs is a high school diploma or equivalent with an overall average of at least 60 per cent in English Language Arts 30-1 (or English 30) and four other appropriate 30 level subjects.
- **The King's University College** in Edmonton offers a two year B.Ed. after-degree program in elementary education. The admission requirement is a bachelor's degree with specified courses and a GPA of at least 2.7/4 in the last 60 credits.
- The **University of Alberta** in Edmonton offers B.Ed. degree, joint degree and after-degree programs in elementary education through the Faculty of Education and the Faculte Saint-Jean. Off-campus B.Ed. degree programs can be completed at Blue Quills College, Grande Prairie Regional College, Maskwachees Cultural College, Northern Lakes College and Red Deer College. The admission requirement for the Faculty of Education is a competitive average in one year of pre-professional studies (usually in Arts, Science, Human Ecology or Physical Education) including 24 units of transferable course weight to the student's B.Ed. major. Admission to pre-professional studies programs generally requires a competitive average in English Language Arts 30-1 (or English 30), three 30 level humanities or science subjects, and one other approved 30 level subject. The admission requirement for the Faculte Saint-Jean program is the same except that 30 level French is specifically required.
- The **University of Calgary** offers B.Ed. after-degree and combined degree programs in elementary education. Students take three years in General Studies, Fine Arts, Kinesiology or Science, then transfer to Education for the remaining two years of a five year combined degree program. The admission requirement for General Studies is a high school diploma or equivalent with a competitive average in English Language Arts 30-1 (or English 30), Pure or Applied Math 30 (or Math 31), and three of the following: Biology 30, Chemistry 30, Physics 30, Social Studies 30, Science 30, or one five-credit Grade 12 subject (French 30, 30S or 30N recommended).

- The **University of Lethbridge** offers combined degree and after-degree B.Ed. programs. The admission requirement for the after-degree program is a GPA of at least 2.5/4 in a bachelor's degree program with a major in a school subject. Students are admitted to the Faculty of Education after two or three years of university studies. Admission requirements for combined degree programs depend on the combined degree desired. The basic entrance requirement is an average of at least 65 per cent in English Language Arts 30-1 (or English 30), three 30 level subjects (math or science courses may be required or recommended) and a fifth Grade 12 subject.

Competition for admission to quota programs is often keen. Post-secondary institutions may give preference to applicants who have had previous experience working with children in a leadership capacity. Valuable experience can be obtained from:

- playground supervision
- day care work
- hospital volunteering
- amateur sports coaching
- teacher assistant work
- working with children in organized groups.

Post-secondary institutions throughout the province offer university transfer programs that allow students to apply up to two years of study toward university bachelor's degree programs. It is the student's responsibility to ensure that the courses they choose to take will be accepted for credit at the institution to which they wish to transfer.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's School Act and Certification of Teachers Regulation, elementary and secondary school teachers must be certified by Alberta Education.

Employment and Advancement

Elementary teachers are employed in public schools, private schools, hospitals and other institutions. To find employment, new graduates may:

- relocate to rural or isolated communities
- work as supply (substitute) teachers.

With experience and additional training, elementary school teachers may advance to positions such as:

- team leader or co-ordinator of a subject area in a large school or school system
- vice-principal, assistant principal or principal
- specialist in a department of education, university or school district.

Elementary school teachers are part of the larger National Occupational Classification 4142: Elementary School and Kindergarten Teachers. In Alberta, people employed in this classification work in the **Educational Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Educational Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 28,000 Albertans are employed in the Elementary School and Kindergarten Teachers occupational group which is expected to grow 1.3 to 2.3 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 360 to 650 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since elementary school teachers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for elementary school teachers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

The Alberta Teachers' Association estimates that about 900 teaching positions will become vacant each year due to retirement alone.

Salary

Salaries vary from one school board to another because wages and benefits are determined by collective agreements between boards and their teachers. Teachers are paid according to a grid system which is based on number of years of training and experience. Administrators such as school principals recieve an additional allowance.

According to the **2005 Alberta Wage and Salary Survey**, Albertans in the Elementary School and Kindergarten Teachers occupational group working part-time or full-time earned from **$12,400 to $95,100 a year.** The average salary was **$62,200 a year.**

All teachers employed in Alberta's publicly supported schools are members of the Alberta Teachers' Association (A.T.A.) and are automatically included under the Alberta Teachers Pension Plan Act. Collective agreements negotiated by the A.T.A. provide a range of benefits including:

- life and disability insurance
- extended health care coverage
- vision and dental insurance
- professional improvement leave.

Holidays and pensions are specified by provincial legislation. However, teachers often use the summer break period of July and August, as well as Christmas and spring-break holidays, for professional development or for fulfilling additional professional responsibilities.

Elevator Constructor

Apprenticeship and Industry Training

Produced FEBRUARY 2006

Elevator constructors install, modify, service and repair electric and hydraulic elevators, personnel and man-hoists, moving walkways, stagelifts, escalators and related equipment.

NOC Number(s): 7318
Minimum Education: Apprenticeship Trade - Grade 12
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **O M I**

Duties

Duties vary from one position to another but, in general, elevator constructors:

- read and interpret blueprints to determine the layout of cylinders, electrical connections and other system components
- do preparatory construction work including steel work, wiring and piping
- install doors and frames, guide rails, counterweights, and elevator, escalator and walkway chassis
- connect car frames to counterweights with cables and assemble elevator cars
- wire electronic control system equipment
- test and adjust equipment
- trouble-shoot when mechanical or electrical systems fail and make repairs
- carry out preventative maintenance programs to ensure public safety.

Elevator constructors may specialize in construction, maintenance or repair work.

Working Conditions

Elevator constructors primarily work indoors with the occasional outdoor work. They usually work a 40-hour, five-day week. Maintenance and service personnel may be on 24-hour call for specified periods of time. There is some risk of injury due to heavy equipment, falls and electrical shocks.

Personal Characteristics

Elevator constructors need the following characteristics:

- mechanical aptitude
- the ability to work well in a small crew without direct supervision
- the ability to do detailed and precise work
- the ability to keep up to date with changing technology.

Educational Requirements

To work in Alberta, elevator constructors must be registered apprentices or certified journeymen.

To **register** with **Alberta Apprenticeship and Industry Training**, apprentices must:

- have an Alberta high school diploma (or equivalent) or pass an entrance exam
- find a suitable employer who is willing to hire and train an apprentice. Electronic or mechanical training is a definite asset.

The **term of apprenticeship** is four years (four 12-month periods) that include a minimum of 1,800 hours of on-the-job training each year. Technical (modular) training is required in the second, third and fourth periods. High school students can become apprentices and gain credits toward apprenticeship training and a high school diploma at the same time through the Registered Apprenticeship Program (RAP).

Applicants who have related training or work experience may be eligible for credit or certification.

Technical training in the form of modules is provided by the Canadian Elevator Industry Educational Program (CEIEP). Apprentices may also attend training at an approved training provider (course availability subject to demand).

Pre-employment programs for prospective apprentices and continuing education programs for journeymen may be offered on an as needed basis by the institution(s) listed above or other schools.

Employment and Advancement

Elevator constructors are employed by elevator manufacturers and independent firms that contract to install, service and maintain elevator equipment. They are generally employed in cities where multi-storey buildings are common. Most elevator constructors in Alberta belong to the International Union of Elevator Constructors.

Elevator contructors may advance to supervisory positions. Alberta certified journeyman elevator constructors who have the supervisory or management skills required by industry may apply for an Achievement in Business Competencies Blue Seal by contacting Alberta Apprenticeship and Industry Training.

Elevator constructors are part of the larger National Occupational Classification 7318: Elevator Constructors and Mechanics. In Alberta, most people employed in this classification work in the **Construction** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Construction industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 600 Albertans are employed in the Elevator Constructors and Mechanics occupational group which is expected to grow 1.5 to 2.5 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since elevator constructors form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for elevator constructors.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

According to the Alberta Provincial Apprenticeship Committee for this trade, journeyman wage rates vary, but generally range from **$22 to $32 an hour plus benefits** (2005 estimate).

© Government of Alberta, Human Resources and Employment

Embalmer

Produced NOVEMBER 2005

Embalmers prepare the remains of people who have died for public visitation and burial.

NOC Number(s): 6272.2
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus below average occupational growth in Alberta
Interests: **M O d**

Duties

Embalmers care for deceased persons with dignity and respect. In general, they:

- embalm human remains to restore, preserve and disinfect them
- perform necessary cosmetology or restorative work to improve appearance
- dress deceased persons and place them in caskets
- maintain records, arrange equipment and assist in the general maintenance of the funeral home.

Embalmers also may supervise funeral attendants or other funeral home staff.

Working Conditions

Embalmers must follow the health precautions and regulations required for personal and public hygiene. Most of their work is done under surgical conditions in a preparation room.

In larger funeral homes, embalmers work normal office hours plus some evening work. In small establishments, they may work longer hours or be required to pick up deceased persons at any hour.

Some heavy lifting (over 25 kilograms) is required.

Personal Characteristics

Embalmers need the following characteristics:

- physical strength and endurance
- good finger and manual dexterity
- emotional stability
- an interest in clinical, scientific and artistic subjects
- a caring attitude toward the deceased and the bereaved.

They should enjoy work with clear rules and organized methods; working with tools, equipment and instruments at tasks which require precision, and finding ways to restore bodies to as natural an appearance as possible.

Educational Requirements

Prospective embalmers should discuss training options with practicing funeral directors or embalmers before enrolling in an education program.

In Alberta, the following institutions offer related post-secondary education programs:

- **Mount Royal College** in Calgary offers a 12 month, full-time program and a two year, part-time (distance) Funeral Director and Embalmer certificate program through the Faculty of Continuing Education and Extension. The entrance requirement for both programs is a high school diploma and Biology 30, or equivalent. Chemistry 30 is strongly recommended.

- The **Western School of Funeral Service** in Red Deer offers:
  - a 10 month Funeral Service Certificate program for people who are not sponsored or employed by funeral homes. The entrance requirement is a high school diploma or equivalent and two letters of character reference.
  - a two year Embalmer's Licensure program and a two year Funeral Director's and Embalmer's Licensure program. Applicants must be at least 18 years of age, have a high school diploma or equivalent, two letters of character reference and be sponsored by a licensed funeral director and embalmer.

Continuing education programs are often offered on an as needed basis.

For current information about programs, admission requirements and mature student admission policies, please check post-secondary calendars or websites.

Other Requirements

Under Alberta's Funeral Services Act, funeral directors and embalmers must be licensed through the Alberta Funeral Services Regulatory Board (AFSRB). A license is not required to work as a funeral attendant under the supervision of a licensed embalmer or funeral director.

Employment and Advancement

(section revised JANUARY 2006)

Embalmers are employed in funeral homes across the province. Licensed embalmers may train to become funeral directors (for more information, see the Funeral Director profile).

Embalmers are part of the larger National Occupational Classification 6272: Funeral Directors and Embalmers. In Alberta, people employed in this classification work in the **Repair, Maintenance, Personal and Other Services** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Repair, Maintenance, Personal and Other Services industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 550 Albertans are employed in the Funeral Directors and Embalmers occupational group which is expected to grow 0.7 to 1.7 per cent each year from 2005 to 2010 in Alberta. Additional job openings will be created by employment turnover. (**Note**: Since embalmers form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for embalmers.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years. However, demand for embalming services is declining because more people are choosing cremation.

Salary

According to the **2005 Alberta Wage and Salary Survey**, Albertans working part-time or full-time in the Funeral Directors and Embalmers occupational group earned **up to $66,100 a year**. The average salary was **$45,900 a year.**

Emergency Medical Responder

Produced NOVEMBER 2004

Emergency medical responders (EMRs) provide pre-hospital emergency medical care and transportation for the sick and injured.

NOC Number(s): 3234
Minimum Education: High school diploma
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: I M O

Duties

EMRs are the lowest tier of Alberta's three-tiered system of emergency medical services personnel (for more information, see the Emergency Medical Technician - Ambulance and Emergency Medical Technologist - Paramedic occupational profiles).

In general, EMRs may:

- assess the extent of injuries or illness to determine medical treatment
- comfort and reassure patients
- obtain the patient's medical history, if possible
- monitor vital signs
- administer pre-hospital emergency care including cardiopulmonary resuscitation (CPR), oxygen, bandaging, splinting, and assisting in childbirth and the treatment of trauma patients
- use a semi-automated or automatic external defibrillator or bag valve mask resuscitator
- use basic airway management techniques
- transport patients to hospital or other medical facilities for further care
- document and record the nature of injuries and treatment provided
- assist hospital personnel as required
- maintain ambulances, equipment and supplies.

Working Conditions

This work is physically demanding. EMRs are required to lift loads weighing well over 25 kilograms (e.g. patients on stretchers). They must observe safety precautions to avoid injury when working with equipment or exposure to potentially hazardous biological agents.

EMRs work both indoors and outdoors, often in stressful circumstances. They may work full-time, part-time or as volunteers. Those employed full-time or part-time work shifts that including evenings, weekends and holidays.

Personal Characteristics

Emergency medical responders need the following characteristics:

- excellent oral and written communication skills
- strong leadership abilities
- sound decision-making skills
- a strong desire to help those in need
- the ability to remain firm, reassuring and efficient in moments of crisis
- the ability to work independently and as part of a team.

EMRs should enjoy compiling information to assess injuries and illness, having clear rules and organized methods for administering pre-hospital care and operating medical equipment.

Educational Requirements

(section revised MAY 2005)

Emergency Medical Responder training programs are designed for people who want to enter the pre-hospital care industry or who already provide emergency services (e.g. fire fighters, police officers).

In Alberta, EMR programs are offered by a number of public colleges, private schools and other organizations. A current list of approved programs is posted on the **Alberta College of Paramedics** website. In general, applicants must be at least 18 years of age and have obtained a Standard First Aid certificate and CPR certification at the Basic Rescuer Level (C) within the previous year.

EMR training programs may be offered by emergency services organizations when there is sufficient demand. Courses that are open to the public are advertised in brochures and local newspapers.

Other Requirements

Under Alberta's Health Disciplines Act and Emergency Medical Technicians Regulation, only members of the Alberta College of Paramedics (ACP) who are registered as emergency medical responders may call themselves Emergency Medical Responders. Registered members provide health services listed in the Regulation.

Employment and Advancement

(section revised JANUARY 2006)

EMRs may work for municipal, private or industrial ambulance services. Some firefighters are also qualified EMRs (for more information, see the Firefighter occupational profile).

Advancement to the second and third tiers of Alberta's system of emergency medical services requires additional training.

EMRs are part of the larger National Occupational Classification 3234: Ambulance Attendants and Other Paramedical Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,650 Albertans are employed in the Ambulance Attendants and Other Paramedical Occupations group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since EMRs form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for EMRs.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for EMRs vary greatly depending on location (e.g. rural or urban setting) and type of employer (e.g. private company, regional health authority). Most EMRs work as unpaid community volunteers.

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Ambulance Attendants and Other Paramedical Occupations group earned from **$14,600 to $39,600 a year.** The average salary was **$53,400 a year**.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

Emergency Medical Technician - Ambulance

Produced NOVEMBER 2004

Emergency medical technicians - ambulance (EMT-As) provide pre-hospital emergency medical care at the basic life support level as well as transportation for the sick and injured.

NOC Number(s): 3234
Minimum Education: 1 year post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M O**

Duties

EMT-As are the middle tier of Alberta's three-tiered system of emergency medical services personnel (for more information, see the Emergency Medical Responder and Emergency Medical Technologist - Paramedic occupational profiles).

In general, EMT-As may:

- assess the extent of injuries or illness to determine medical treatment
- comfort and reassure patients
- obtain the patient's medical history if possible
- monitor vital signs
- administer pre-hospital emergency care such as cardiopulmonary resuscitation (CPR), oxygen, bandaging, splinting and assisting in childbirth
- use spinal immobilization devices and traction splints
- maintain intravenous infusions without medications or blood products
- provide glucose testing and orally administer glucose when needed
- document and record the nature of injuries and treatment provided
- assist hospital personnel as required
- maintain ambulances, equipment and supplies.

Some EMT-As may also supervise and train staff members and students, and assist paramedics (where there are combined services).

Working Conditions

This work is physically demanding. EMT-As are required to lift loads weighing well over 25 kilograms (e.g. patients on stretchers). They must observe safety precautions to avoid injury when working with equipment or exposure to potentially hazardous biological agents.

EMT-As work both indoors and outdoors, often in stressful circumstances. They may work full-time, part-time or as volunteers. Those employed full-time or part-time work eight to twelve hour shifts that include nights, weekends and holidays.

Personal Characteristics

EMT-As need the following characteristics:

- excellent oral and written communication skills
- strong leadership abilities
- sound decision-making skills
- a strong desire to help those in need
- the ability to remain firm, reassuring and efficient in moments of crisis
- the ability to work without supervision and as part of a team.

EMT-As should enjoy compiling information to assess injuries and illness, having clear rules and organized methods for administering pre-hospital care, and operating medical equipment.

Educational Requirements

(section revised MAY 2005)

Applicants for EMT-A positions must be at least 18 years of age and have:

- EMR (Emergency Medical Responder) certification
- valid standard first aid and basic rescuer CPR certification within the previous 12 months
- a high school transcript
- a valid Class 4 or 5 drivers license.

Emergency Medical Technologist - Ambulance training programs are offered by a number of public colleges, private schools and other organizations in Alberta. A current list of programs is posted on the **Alberta College of Paramedics** webiste.

Other Requirements

Under Alberta's Health Disciplines Act and Emergency Medical Technicians Regulation, only members of the Alberta College of Paramedics (ACP) who are registered as emergency medical technicians may call themselves Emergency Medical Technicians. Registered members provide health services listed in the Regulation.

Employment and Advancement

(section revised JANUARY 2006)

EMT-As work for ambulance services and related industrial and emergency services. Newly graduated EMT-As usually start their careers in rural settings and, after they have gained experience, may move to larger urban centres.

Experienced EMT-As may take additional training to upgrade their scope of practice. Use of advanced skills must be approved by the Alberta College of Paramedics and the ambulance service in which they are employed.

EMT-As are part of the larger National Occupational Classification 3234: Ambulance Attendants and Other Paramedical Occupations. In Alberta, over 75 per cent of people employed in this classification work in the **Health Care and Social Assistance** industry.

The employment outlook in this occupation will be influenced by a wide variety of factors including:

- trends and **events** affecting overall employment (especially in the Health Care and Social Assistance industry)
- **location** in Alberta
- **employment turnover** (work opportunities generated by people leaving existing positions)
- **occupational growth** (work opportunities resulting from the creation of new positions that never existed before)
- **size of the occupation.**

Over 1,650 Albertans are employed in the Ambulance Attendants and Other Paramedical Occupations group which is expected to grow 1.6 to 2.6 per cent each year from 2005 to 2010 in Alberta. It is forecasted that 20 to 50 **new** positions will be created each year **in addition** to job openings created by employment turnover. (**Note**: Since EMT-As form only a part of the larger occupational group on which this forecast is based, only a portion of the new positions created will be for EMT-As.)

Employment turnover is expected to increase as members of the baby boom generation retire over the next five to ten years.

Salary

(section revised OCTOBER 2005)

Salaries for EMT-As vary greatly depending on location (e.g. rural or urban setting) and type of employer (e.g. private company, municipality, regional health authority).

According to the **2005 Alberta Wage and Salary Survey**, part-time or full-time starting salaries for Albertans working in the Ambulance Attendants and Other Paramedical Occupations group earned from **$14,600 to $39,600 a year.** The average salary was **$53,400 a year**.

For information about current collective agreements in the public and not-for-profit sectors, see the Health Sciences Association of Alberta (HSAA) website.

© Government of Alberta, Human Resources and Employment

Emergency Medical Technologist - Paramedic

Produced NOVEMBER 2004

Emergency medical technologist - paramedics (EMT-Ps) provide pre-hospital emergency medical care at the advanced life support level as well as transportation for the sick and injured.

NOC Number(s): 3234
Minimum Education: 2 years post-secondary education/training
Employment Outlook: Employment turnover plus average occupational growth in Alberta
Interests: **I M O**

Duties

For simplicity, emergency medical technologist - paramedics are called paramedics throughout this profile. They are the top tier of Alberta's three-tiered system of emergency medical services personnel (for more information, see the Emergency Medical Responder and Emergency Medical Technician - Ambulance occupational profiles).

In general, paramedics:

- assess the extent of injuries or illness to determine medical treatment
- comfort and reassure patients
- obtain the patient's medical history if possible
- monitor vital signs
